I have the following original Telefunken Tubes (Made in Germany) for sale:

ECC 81 (B5215024) x 2
ECC 82 (B2015126) x 2
ECC 82 (B6005926) x 1
ECC 83 (B5215001) x 2
ECC 83 (B3105701) x 1
ECC 83 (B81056??) x 1
EAM 86 (B3105800Sa) x 2

E-mail me and make a reasonable offer.

tatkins@unix1.sncc.lsu.edu

Hi Tom,

There's only one thing it takes to learn CW, persistence!
It was a real struggle for me originally but well worth it.
Don't let anyone, particularly those lazy people who will
tell you CW is obsolete, talk you out of it. When you talk
to that 10 watt station in the furthest corner of Russia or
get WAS with 1 watt, you can have the last laugh. Hang in
there.

73, Jim WB6LWS

The Society of Newfoundland Radio Amateurs will be sponsoring HamJam95,
the VO Hamfest, from July 14 to 16, 1995. It will be held in St. John's at the
Airport Plaza Hotel and we have a load of stuff on the agenda. The Hamfest will
also play host to the Annual General Meeting of VOARA, the VO Amateur Radio
Association, the NF Provincial organization. Our guest speaker at the banquet
will be Farrell (Hoppy) Hopwood VE7RD, President of RAC.

Because of venue obligations, the cut off for registration will be July 6th, 1995.

For further information, contact Ken Whalen VO1ST via:

VO1ST@VO1SIG.#ENF.NF.CAN.NA
or
kwhalen@plato.ucs.mun.ca
or
HamJam '95
Box 1226
St. John's, NF
A1C 5M9

either one or all!!

CU there!!

We got back from there at the end of March. I had looked into getting a reciprocal license, but didn't have time since we made our plans on about 2 weeks notice. As I recall, they said the time involved was 4-6 weeks, so I'd send the application by Federal Express or other overnight service.

If you're going to start your trip in London, you might ask them to hold the license at the Radio Communications Agency so you and it don't cross somewhere over the north Atlantic.

A couple of British hams had told me over the air that they thought we had automatic reciprocal licensing (such as we do with Canada), but that's not correct. Unfortunately, they only have it with the other countries of the European Community. Too bad -- the guy at the Radio Communications Agency said they had a lot of requests from American hams that were too late to be processed in time for their trip, and I'm sure a lot of British hams have the same experience here.

Any 6 meter packet out there ?

I 1-min. beacon (1200 baud) on 50.620 or 51.700 MHz. Would like to know in what areas, what 6m digi frequencies are being used.

And what about FEC & the TOR modes at the low end. Does 50.095 sound like a good FEC beaconing freq ?

Your thoughts...

11. Tips on learning the code

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-01 00:00:00 UTC
From: aa7tq@primenet.com
Message-ID: <aa7tq.9.07B86A05@primenet.com>
Source record: 243265

This is not for those who want to fight with me over code or no code. I enjoy CW and the people who I talk with on it. If you don't want to learn it, don't!

This is a compilation of what I've learned seems to work when teaching morse code to people. Hope this helps.

From No Code to Know Code
by Dave Kelley, AA7TQ

DRAFT COPY

I'm not going to start out by telling you that learning the code is fun. I'm not going to tell you there is an easy way to learn it. But, like just about everything, there is a right way and a wrong way to do something. I hope to give you some ideas that should help you learn the code and get all the way to the top. Like many, you may learn to love the CW mode. Don't believe it can happen? Listen to the CW bands on any day and compare the number of QSOs going on compared with the phone band. You probably will find more people chirping than yapping.

Here are some points to think about. People all learn differently so use what you think will work for you and discard or modify these ideas for your own use.

* Don't learn it at a slow rate, even from the start.
If your goal is to get to 20, or even 13 words per minute set your learning speed accordingly. For example, if your goal is 20 then try to copy with a character speed of 22 wpm with a long space between characters. As you start to recognize the letters quicker you can simply close the spacing between the letters until your at full speed. This allows you to get used to the sound of the characters at this speed. Hearing code at a slower speed later will be easy to recognize opposed to the other way around.

* Listen to the SOUND of the characters.
Learning code at a higher speed helps you avoid one of the biggest problems we all have when starting out in code. We tend to "count" dits and dahs or visualize the letter on paper with the code next to it (A .-). If you learn code by doing any counting, memorizing code charts, or even thinking about the pattern of the sound you will find those "plateaus" you may have heard about. These are blocks that you'll find at about 10 and 18 wpm. Our minds can do these conversions only so fast.

By learning the sounds of the character we can learn to copy almost automatically. If I were to recite letters to you in English you would

be able to write them down without thinking about how to form the letter or even what it looks like. You just know that when I say "Double-U" you would write W on the page. Code should be learned the same way. No conscious conversion processes in between.

* NEVER use crutches!
In keeping with the above paragraph you should stay away from crutches. One that comes to mind that is the worst way to learn code is the Sound=Catchy Phrase=Letter technique. This is were you learn little rhymes that go with each letter. The letter C is "Catch-it Catch-it", like the sound of the C. THIS IS A VERY BAD way to learn the code. Can you imagine using this to copy at 20 wpm? You'd hear the sound, have to think of the phrase, then think of what letter it was from that phrase and then write it down. Ooops, you just missed 5 letters while you were doing all that mental converting. Chances are, you'd never make it to 20 wpm using that crutch. Frankly, I think learning it simply by the sound of the letter would be easier than learning little rhymes anyhow.

* Learn to drop the pencil from time to time.
Some of us can't write at 20 wpm. I can, but my hand gets mighty tired in a long QSO. So, drop that pencil and close your eyes. Listen to the letters and let them form behind your eyelids instead. You'll start seeing whole words there. Then you'll get the hang of hearing complete sentences without forgetting letters as fast as you hear them. Think about this. The only conversion we have really talked about (that's okay) is from hearing the sound to writing it down. If we take away the part about forming the letter on paper our brain has even more time to just listen and comprehend the code...leaving it time to remember the order of the letters. People who have learning this can listen to the CW band as easily as they can the phone band. As you tune around you'll hear what people are saying very clearly.

Without the pencil pushing to get in the way your code speed will jump several notches too. You might find yourself listening to a couple guys or gals talking at 30-35 wpm and copying without much effort. You sure couldn't write it that fast. So, drop that pencil and just listen for a while.

* Taking the test.
Being a VE for many years I have seen everything in our code sessions. Stress is always present (no matter how many jokes I tell first) and people usually react negatively to stress. You should have a skill level of 2-5 wpm over the actual test you are taking. Your comfort level will be better. If you have heart problems or get sick under extreme stress let the VEs know this so they can work with you.

The code tests are nothing more than a sample of QSOs like you might hear on the air. It sends call letters and information about things like RST, QTH, name, rig, weather and other standard chat stuff. Knowing how we talk on the air can be a big advantage so if you have a way to receive HF or even better, if you can get on the air by all means

do it.

When taking the test You might want to decide if you want to go for the 100% copy. This might be good for some people. If you copy on paper and know you are doing well from the computer, tapes or on the air then this would be good. If you have learned with the "pencil down" method you might want to just take notes. When you hear key words write them down. He has to QRT for lunch, his antenna is a dipole, or he has a schedule with his mother in Botswana. You might write lunch, dipole, mother, Botswana. You can then answer the questions on the multi-choice sheet rather easily. This is not cheating in any sense of the word either. The idea of knowing code at a particular speed means you can comprehend what the information is..and we are doing that here.

Well, there you have it. I have known many people over the years who have used these key ideas to gain a mastery over the Morse code. Most of them you can meet...the next time your on the air...in the CW bands. Enjoy.

|>
|> N1NH was one station
|> which stood out, probably because we worked it on several bands and
|> because their category was *24A* (how in the world did you avoid
|> in-band interference with that many transmitters?)

|The idea of operating in a high class like that is to be the only one in
|it and thus assure yourself of winning your category. The 24 doesn't
|mean they had that many transmitters on all the time, just that there were
|that many on at some point in the contest. Usually what they do is have
|everyone key up their HT at once for a few seconds!

I refer you to Jim Heedles' (WW1Y) posts in this thread, but in a
period Saturday afternoon (I missed it unfortunately) N1NH was
operating CW and SSB on each band from 160 through 440 with
operations on several of the remaining bands including 900 ATV and
300GHz+. Well, see Jim's posting.

| Probably they only had
|a few stations operating continuously, like all the rest of us. Look at
|the scores in QST, they're not much higher (and in many cases are LOWER)
|for teams operating these huge numbers of transmitters than what most 2A
|and 3A groups have.

This is true. The extra bands, usually in the UHF and higher, don't
yield great numbers of Qs; the main advantage is the per-transmitter
bonus. The smaller stations often do so well because of the extra
point value per Q of operating on battery or QRP or somesuch; we
were operating in under 150W on field generated 240/110.

On the other hand, we had a lot of fun and gave a lot of newer hams
plenty of interesting and useful experience.

>Piss on you DXers that are like that.
>
>
>Marc
>

Well, (1) We're not ALL like that! A small percentage, maybe. But I know
it only takes ONE lid to ruin a QSO!

(2) Senegal is not a rare DX country. Perhaps it was in the early 80's
but I reacll it wasn't rare then, either. 6W6JX is on frequently; I have had
many nice ragchews with him and others in that country. The guy who did
that must not get on the air much!! :-)

I haven't tried it, but according to the SuperMorse manual, SuperMorse
can send Morse code using one of the RS-232 support lines, like DSR (DTR?)
driving a transistor switch to key the transmitter. If a transistor is
not compatible with the transmitter keying circuit, a relay can be driven
by the transistor. The relay then drives the transmitter CW keying input.

16. Magneto Telegraph

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-01 00:00:00 UTC
From: forrest.gehrke@cencore.com
Message-ID: <6e.20708.332@cencore.com>
Source record: 243270

Last week on a tour of the Fredericksburg, VA Civil War
battlefields I saw at one of the U.S. Park Service
tour centers a telegraph instrument called Beardslee's
Magneto Telegraph. It was in a wooden case approximately
2 feet wide, 1 1/2 feet high and 1 1/2 feet deep.

It was described as a telegraph instrument which could
be used without the need of the operator to know
any code and was capable of 7 to 15 words per minute.
There was no explanation of its electrical mode of operation
except to say that no batteries were required.

On the top was a circular face with the letters of the
alphabet and the numerals 0 to 9 inscribed. A movable
indicator (like the minute hand of a clock with a knob
on the end of it for grasping) could be turned to
each character and then depressed to actuate a switch.

It's operation was described as simply requiring the
operator to turn the indicator to each successive
character of the message, depressing the indicator,
and then proceeding to the next character. An identical
instrument, acting as a receiver, would follow this
action and that operator had merely to record the characters
indicated by the pointer. There was no explanation
of how distant the receiver might be in order to
reliably receive. The implication was that this
instrument was used for intra-battle line communications.

The front of the cabinet was open and a gear train could
be observed attached to the central indicator. To one side
was what appeared to be an arrangement of a movable
armature coil surrounded by four large iron pole
pieces which obviously was the magneto. The central
gear train appeared to be able to turn the magneto but
the front opening was not big enough to observe this well.

I was mystified. I had never heard of this machine before
and the technology did not look like anything that could
have been available in the 1861-1865 period. Furthermore,
if its capability was as good as indicated, why would there
ever have been need for telegraph operators? Perhaps its
signal was too weak for any long distance operations?

My guess is that there would be a fixed number of alternations
of current produced as the indicator was pushed between each

character and that therefore the receiving instrument's magneto would make the same number of turns. There would have to be a mutually agreed upon starting point for each message in order to maintain synchronism. Would the receiver magneto reverse when the transmitter indicator was reversed, or would the transmitter always be required to turn in the same direction for the next character of the message?

Can anyone shed light on this instrument? Was it actually in use during the Civil War period?

18. ARRL Internet Services (monthly posting)

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-01 00:00:00 UTC
From: mtracy@arrl.org
Message-ID: <rec.radio.info-arrl.info_804618002@ve6mgs.ampr.ab.ca>
Source record: 243272
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Greetings from ARRL headquarters!

The services that the American Radio Relay League provides via the
internet include a World Wide Web page, an FTP file archive site,
an automated email information server (Info-Server), a number of email
mailing lists and direct email to most HQ staff. If you have any
questions about the following information, please send them to me at
mtracy@arrl.org.

Best regards - Michael Tracy, KC1SX, ARRL Technical Information Services.

* World Wide Web (URL http://www.acs.oakland.edu/barc/arrl.html)

The ARRL's Web home page is provided for by the generous folks
at Oakland University in Michigan. This page, maintained by
Scott Ehrlich, WY1Z, of the Boston Amateur Radio Club, features
the following information links:

Access to our FTP archive files
The ARRL and our membership services
Lists of upcoming license exam tests
The complete text of FCC rules Part 97
Contacts for volunteers who assist with emergencies and disasters
ARRL sponsored hamfests and conventions listing
ARRL sponsored contests
The latest ARRL Letter
Links to the web pages of ARRL affiliated clubs
W1AW bulletins
...and more!

* FTP archive site (oak.oakland.edu)

This FTP site (also at the University of Oakland) currently contains
a complete mirror of the files on our Email Information Server. It
also features a growing number of files from the ARRL telephone BBS.

To access this site, FTP to oak.oakland.edu. At the "login:" prompt,
type ANONYMOUS and at the password prompt, type your email address.
Change directory to pub/hamradio/arrl/infoserver and get the file
index.txt for a listing of what files are available (and in what
directories!)

* Email Information Server (info@arrl.org)

The Email Information Server (Info-Server, for short) is an automated
mail server that gives you access to many text files relating

to various facets of Amateur Radio. To obtain more detailed instructions
and a list of available files, send an email message to info@arrl.org
with any subject (it is not used) and the following text in the body
of your message:

HELP
INDEX
QUIT

Each file you request is then mailed to you automatically.

* Email Mailing Lists (listserv@netcom.com)

The following email lists are distributed by Netcom internet services
and are sponsored by Mike Ardai, N1IST, and the Boston Amateur Radio
Club. If you have any questions about these lists, please direct them
to Mike Ardai, N1IST at n1ist@netcom.com. For more information on the
Boston ARC, subscribe to barc-list.

arrl-exam-list: Amateur radio license examinations scheduled in the US
and in some foreign areas.
arrl-nediv-list: Bi-monthly bulletins from the ARRL NE Division director
arrl-special-olympics: Information about amateur radio's involvement in
the
Special Olympics
arrl-ve-list: Announcements to VEs and VE teams.
barc-list: Information, discussion and announcements for the Boston
Amateur Radio Club and hams in Eastern Massachusetts.
barc-races: RACES in Massachusetts and emergency management
ema-arrl: ARRL Eastern Massachusetts section discussions
fieldorg-l: ARRL field organization discussions
fox-list: Fox hunting and Radio Direction Finding
ham-tech: Technical discussions and questions about Amateur Radio
ky1n-list: VE exams in New England
letter-list: Redistribution of the ARRL Letter
newsline-list: Redistribution of Amateur Radio Newsline
w1aw-list: ARRL bulletins, news, and information

Burt Fisher <K1OIK@ccsnet.com> writes:

>Harmonics? Like 4MHZ, 8 MHZ 12 MHZ?
>Only a ham would refer to a child as a frequency.

Yeah, I've always preferred hetrodyne.

>You do have the important part correct.
>What is your idea of a fantasy? Working a rare tropical island OR being on
>that island with your wife?

Are these mutualy exclusive? Most hams would rather take their
main squeeze to the island and include a DXpedition while
they are there.

Come on Burt, if you spent as much time as you imply
enjoying your wife we wouldn't see nearly as many of
your dim witted provcations. Are you trying to
attract our attention because you can't get any
from her?

There has been a tropo opening for parts of the past few days,
and we have made VHF/UHF contacts with stations on the west coast
(USA) with 20-100 watts. When we closed down, reports were 5-9.

We will be trying again today

I believe you are confusing two companies. RF Parts is the USA rep for Diamond as well as selling various power transistors and FETs.

RF Concepts is a part of Kantronics (or vice versa, they are always in one booth at the trade shows, and are the same folks).

I've had reasonable luck with RF Concepts amps, and have seen problems with some of them. Their construction is better than that of Mirage (not much of a compliment for RF Concepts, since most anything would be a step up from Mirage). They have no problems with you opening the case, and indeed you may need to solder a jumper in a different position depending on keying line interaction with your rig (if using SSB and hard keying). Mirage puts stickers on the product indicating that opening the box voids your warrantee. On consumer gear I suppose you can get away with that, but it's not usually appreciated in the ham marketplace...

Lewis:

What you describe will certainly not be optimum, however, it should work. There may be some directivity on some frequencies, but I wouldn't count on it. You may have to tinker with the
wire segment lengths some to maintain resonance, but that's what ham radio is all about anyway.

With the proximity to house wiring that you will have, you may experience some mutual interference to/from TV and telephone service. This may require some extra effort to overcome
or may necessitate avoiding some freqencies. You will just have to wait and see.

If it's any consolation (I'm almost ashamed to say this), I have two acres and no deed restrictions but because my interest is mainly 2M CW/SSB, my HF antenna is a trapped dual-band
20/80 meter dipole 20ft high in the middle and about 10' at the ends.

With 100 W on 80 meters, I can work all of the US and have worked JA, VK, etc so don't dispair. Just stay out of contests :-)

Best wishes in your studies and many happy years of hamming.

Regards, Wes Stewart, N7WS

Amateur Radio Elmers Resource Directory (as of 07/01/95)
++++++++++++++++++++++++++++++++++++++++++++++++++++++
- A -
++++++++++++++++++++++++++++++++++++++++++++++++++++++

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:

ipaddr@ag9v.ampr.org
```

which is a mailing list read by a team of coordinators.

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html
http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

""

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan
Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and
Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV;
Happenings by Jim Cain, K1TN; Contest Corral and Special Events by
Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by
Gail Iannone; most of the contest rules announcements and results
articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New
Products listings scattered throughout the magazine, and often

contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Maintainer of List of Periodicals of Interest to QRP Enthusiasts, Electronics Books of Interest to QRP Enthusiasts, and Antenna Books of Interest to QRP Enthusiasts

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and

experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP,"
"MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.)
To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get
transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your
guest login name (if you have one). If you want a permanent login,
write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have
experience using their 56 kBaud radio modems. At the very least, I can
forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by
WA4DSY explaining the theory and practice of the 56 kBaud radio modem.
(I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
but there are better solutions. The Ottawa PI card and the Gracilis
PacketTwin card are two good solutions. Of course they are PC bus
cards. If you need standalone capability, the Kantronics Data Engine
can handle it, as can the incredible Gracilis PacketTen. PacComm claims
their new Sprint TNC can, too (PacComm now also manufactures the
Gracilis cards under license and you can get them either from them or
from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done
"digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20,
creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number,
and turnaround on info requests may be slower than when dealing with
commercial outfits. Please cut the volunteers a little slack.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a

station).

Scott Ehrlich, Internetworking ASM, Eastern Mass. E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:
ftp://oak.oakland.edu/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put
together a World-Wide Web page for the American Radio Relay League
(ARRL).

Since the ARRL does not yet have web capabilities of their own, this page
is being offered on the same site as the Boston Amateur Radio Club's web
page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff,
official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch
with the word "help" in the body for more information). Ask me for
more details about this.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service

information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

++

Richard Hieber DL8MFQ, AA8CP (Extra Class)

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise: QRP work
mobile operation
computers (DOS, OS/2, Linux)
Packet Radio
wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html
http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

root@jackatak.ThePorch.com - "Plus ca change, plus c'est la meme chose"

Mobile Antenna Systems and Installation (Primarily HF)
- power distribution
- frame grounding
- antenna selection and construction
- mounting the rig
- useful accessories
- Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KD6EUI.

The new mailing list addresses are now
boatanchors@ThePorch.com
rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is
ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is
ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official

governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://ftp.uu.net/usenet/news.answers/radio/cb-faq/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Currently the posting of these articles have been suspended indefinitely
(and will probably be removed from the above sites shortly). New
editors are being actively sought to take over maintenance of the above
resources and keep them from disappearing from the net permanently. As
with any volunteer effort, new volunteers are often needed. We need new
editors to post the above FAQ's. Preferably this should be someone who
has enthusiasm for hobbyist radio, experience with Usenet, and the
ability to work with the other editors. No single person can know all
the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ's were posted with the AUTO-FAQ software, which is written in
Perl. So it would be a plus for volunteers to post the FAQ to have Perl
installed on their system and be able to use "cron" or "at" so that
postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact me at my E-mail address above.

The rec.radio.amateur.* Working Group Mailing List is now being
maintained by Jack Hill. See his entry for subscription information.

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the Amateur Community (but there are plenty of other wares on-line). Through user support I hope to keep the latest and greatest ham software on-line. The BBS also offers access to nearly all of the Internet (USENET) NetNews groups, plus access to most Internet services such as Email, FTP, TELNET, Gopher, WWW, Callsign Lookup, Etc... Below is the information that is needed in order to access the BBS via Telephone, Telnet, or FTP. Please pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410 661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

+1 410 661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - telnet://wb3ffv1.sed.csc.com/ (login: bbs)
ftp://wb3ffv1.sed.csc.com/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2 and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of the software that is available for downloading:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)

Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available archives
are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://wb3ffv1.sed.csc.com/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://wb3ffv1.sed.csc.com/

and login as 'anonymous' (may not be necessary, depending on your FTP
client). This system is currently attached to the Internet via a dialup
SLIP link, and should generally be available 24hrs, but at times the
modem will drop the line. Also, since this isn't the fastest link, I
will be limiting the maximum number of anonymous sessions for the
moment.

ampr.org IP Coordinator for Maryland Subnet (44.060.xxx.xxx)

(see James Fay's entry instead for ampr.org IP coordination in
Prince George's, St. Mary's, and Calvert Counties)

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com

---

Author of the QRZ! Ham Radio CDROM. I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data files, frequency lists, etc., that would make a useful edition to the QRZ CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ to qualifying non-profit organizations. Send

E-mail or call +1 602 483-2036.

We now have the QRZ FTP archive and QRZ WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

ftp://ftp.qrz.com/
http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

++

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CD-ROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30.
Free CD-ROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please e-mail to Perens@Rahul.net. You may be be able to get a free CD-ROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is
also a ham radio section for "manufacturers and dealers" on America
On-Line in which we list Amateur Television Quarterly, as expert and
manufacturer. That is where most of the Frequently-Asked Questions
(FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV
Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a
300-page technical manual with theory and projects for all equipment
necessary to operate an ATV station. Prices are $9.95 and $24.95 plus
postage ($3.10). Most of your inquires can be answered by either of
these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ,
which answers many of the technical FAQ's on various equipment and
operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is
expensive and limited!

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

David Stockton, GM4ZNX

dstock@hpsqf.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL Technical Information Service Coordinator (tis@arrl.org)
ARRL Email Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL Email Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1) How to operate HF from your apartment without being evicted
2) How to pass tests, both written and code
3) How to make a virtue out of the necessity of your limited equipment,
and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the
baby is asleep, so the XYL demands silent running. Besides, with my
wimpy wire, there is little point in trying to run voice.

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server.
In addition, various files and programs are available for anonymous
FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to

certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information
about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing
service may be obtained by requesting the "address book". Note that
the address book as distributed contains only the callsigns of the
available addressees, not their actual Internet addresses. The address
book is updated occasionally, and does not necessarily contain the very
latest information.

You may request to be added to the list, to be deleted from the list,
or to have your Internet address changed on the list. Please include
your callsign if you have one. If you don't have a callsign, that's
OK, but please say so. If you have more than one Internet address
you want to have available on the AMSAT.ORG remailer, you may so
specify. For instance, if you have a regular Internet address and a
CompuServe account, you may appear in the address book as both w1xyz
and w1xyz-cis. Mail sent to w1xyz would go to your Internet address,
and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts
have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing
lists described above. Send a message to listserv@amsat.org,

specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

Posted-By: auto-faq 3.2.1.3
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.14 06/14/95 23:45:31
Changes: Added new FTP and WWW sites
Posting-Frequency: posted on the 1st and 15th of each month

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this
Directory, I've decided to adopt Uniform Resource Locator (URL) format
throughout. In addition to being a straightforward, human-readable,
format for specifying File Transfer Protocol (FTP) archives, Gopher and
World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable
to formatting as hypertext links in Hypertext Markup Language (HTML).
For example, users viewing this document at designated World-Wide Web
Servers (see "How may I obtain the latest copy of the Elmers List?"
below) will see all URL's converted to hypertext links on their WWW
client. Rather than fumbling with the various conventions of FTP,
Gopher, WWW, and Usenet News software, the document or directory
referenced by a hypertext link is but one mouse- click (or key-click)
away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide
further information about how to obtain and use WWW client software
such as Lynx and Mosaic (see his entry). While I'm happy to
incorporate the latest and most popular information-formatting
standards into the documents that I maintain, I really can't allow
myself to be dragged into the role of a WWW help-desk for all of the
Internet. Please understand this when I politely refer you to other
Elmers, easily-obtainable on-line documentation, or even local
expertise such as resident gurus, consultants, or help-desks at your
school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of
this somewhat radical new standard, especially to many users who can't
or won't use WWW. Those users should be assured that I wouldn't have
adopted a standard unless it was easily human-readable by those
accessing this document as straight ASCII (which is one of the main
reasons why the entire Elmers list isn't HTML, MIME, MMDF, or
one of many other competing, mostly non-compatible, information
formats). The URL format is easily mapped into human FTP, Telnet,
Gopher, and Usenet News reader commands. For example:
```

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.

Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament

about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles)

in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/

gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW sites:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html

The advantage of reading the Elmers list at these sites via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about a dozen of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

You are the idiot.
In most areas ham radio serves no purpose other than to cause old fat white
dirty men to sit on their butts. There are exceptions but they are
EXCEPTIONS.

[sorry email failed]

Check out last Tuesday's (i.e. ~13 days ago) Herald or Australian
computer supplements, my usual (but not only) sources for News Briefs.
Sorry, I don't have the originals to hand. I chuck the articles once I've
finished, to avoid unwanted paper buildup.

John Thompson (jthompso@nermal.santarosa.edu) wrote:
: Hello,

: I will be taking a trip to Cincinnati in a couple of weeks and I want to
: take my ft-530 HT with me. Will the airplanes (United) not allow me to
: bring it on the plane? I know they don't want me to use it on the plane,
: but I want to have it with me a soon as I land and I don't want it to get
: banged up in my luggage. If anybody has any experience with this PLEASE
: let me know as soon as you can. It would be best if you could e-mail me
: directly, as I rarely get a chance to check this group.

We just returned from Alaska last month. I took two HTs, 2m and 440 in a soft-sided briefcase, with the ducks sticking out the top. No one questioned them; not security, not the flight crew.

You probably won't have a problem, unless you run into some clueless rent-a-cop when passing through the security check. You might also get a friendly warning from a crewmember; no big deal.

I don't blame you for not wanting to pack them in your checked luggage. We switched planes at LAX, and when we claimed the bags in Fairbanks, the outsides were very dusty.

Tom Randolph (randolph@est.enet.dec.com) wrote:

: Sorry, folks, but sometimes CW is a good choice. Maybe not the theoretically
: perfect or best choice, but a good one. Why is this so difficult to accept?
: Why MUST my backpacking trip advance the state of the art of radio? It's a
: vacation, not a master's thesis!

TOM, et al
Your use of CW is your choice. NO ONE wants to deny you your
opportuunity to use CW. No one is saying if CW testing ends that
your use of CW on the air must end. NO ONE is saying if you only
want to have a QRP CW rig that you shouldn't. BUT, just because
you have a fondness for CW or have some occasions where you belive
CW is the best mode to operate with that does not automatically
justify that every other ham on HF must pass a CW test.

: BTW, I can think of plenty of other places where CW works just fine. For
: instance, some of my ham friends are into 10 GHz - what's the first
: transmission they ever made when trying to get going on that band? Their call
: sign in CW! You guys would no doubt have them hooked up to a DSP system,
: running some exotic modulation at Gbits per second just to send their call!

As above, if CW fits, use it. If there's an actual need for CW, then
those individuals that choose to use it will learn it and use it.
That's what it boils down to. There's no need to force CW on anyone
anymore (except for the moment to satisfy the minimal requirements
of the ITU treaty)..

IOTA DX'PEDITION TO CULATRA ISLAND EU-145

The NPDXG - Northern Portugal DX Group and the RCL - Radio Clube
de Loule are organizing a Multi-single entry on the 1995 IOTA Contest
from the Culatra Island IOTA EU-145.

The station will be active some days before the IOTA contest on all bands,
all Modes, including Satellites.
During the IOTA contest (29th and 30th of July 1995) will be active
as CQ2C (requested callsign) on SSB and CW.

QSL Manager for Europe will be CT1EEB and for all the
North Americans via WA1ECA.

This Island is good for:
IOTA with the Ref. EU-145
DIP with the Ref. AL-001
The DX'pedition will also be good for the Portuguese Lighthouse award.

The NPDXG TEAM will be:
Pedro CT1DNF , Jose CT1EEB , Miguel CT1ENQ , Luis CT1ESO ,
Ruben CT1ETZ , Rui CT1FAK and Pedro CT1FDR.

The RCL TEAM will be:
Celestino CT1ASU and Rui CT1ERY

Cross-posted to: rec.radio.amateur.misc,ont.general

FOR SALE:

19 inch Rack Mount cabinet. Was previously used to hold heavy disk drives for old Unix system which has since departed. The cabinet stands roughly 5 feet tall, and is perhaps 3 feet deep, with a standard 19 inch rack width.

Two removable side panels (dark brown) and some front/rear panel portions (tan) are included. Has extra front extendable foot to prevent cabinet tip over, and castor wheels.

$ 50.00 Cdn, to the first person to take it out of the garage.

Call, Warren at home, (evenings please) 905-646-3915,

or until Fri July 14th, during 9-5 at Work 905-356-6382.

Keith Wyatt <kwyatt@fact.tcf.com> writes:

>Come over to California and pay our fees, Geez, talk about fees!

YOu got that right - I "lived" (if you can call it that) in the Bay
area for about a year and a half. When the CA DMV told me they wanted
$400 for plates plus a $300 "smog impact fee" I told them to shove it
and kept my out-of-state plates since I knew I wasn't going to
stay long anyway. I never could understand what they could do with all
that money, given the amount of cars in California. You would think that
the state would have more money than they could possibly spend, but
on the other hand we are referring to government bureaucrats.
Anyway, I'm back to paying PA my $24 per year and that's Ok with me.
I'm really suprised that the Californians didn't revolt against the
registration fees when they dreamed up Proposition 13!

you need to separate the individual cells to zap-em...dont have to unsolder them tho. just make sure that you can get to each individual cell with a meter.
Find the offending cell,,,usually only one and the whole pack is done for. check each cell with a meter, (you can do this with them all still assembled in the pack.) Place a test lead on the positive one and a negitive lead on the neg.
I just use my test meter leads, same one that i found bad cell with. Now connect your leads to a power source. (power supply, car battery, ni-cad "d" cell or whatever,) [nicad "d" cell works because a nicad can discharg a large amount of current fast] hit it with some power; you will get a spark, so dont become alarmed, hold it on there for a while [10 or so seconds usually does it] Maybe even 1 or 2 seconds, I dont know. There a lot of neat gizmos that will do this for you but I have found out that my astron pwr supply has fixed 90% of my dead nicads. Not very scientific or precise, but it WORKS. Nicads are not nearly as fragile as i had once thought...Dont hold it on there till it gets hot, just hit it for a few seconds and then check it with a meter, chances are that it will show a very good charge, not charged but will show good voltage. As much or more than the others in the pack, Charge well and go, Nicads grow "whiskers" that eventually grow together to form a short. killing (sorta) the cell, this harsh treatment will also take care of a cell that has been cross polarized (sounds bad dont it). Might work on fags too, I have seen girls that could make a queer change his ways. Not very calculated but this will fix it. I tryed a couple of circuits that were made to do this and found out that it is easier and faster to just hit em with a jumper cable for a few seconds. "ZAP" it'll get em every time. I used to unsolder the offending cell and place it in a fixture to carefully repair the problem, but what the hell I aint broke one yet. just zap it and before long you will have a junk box FULL of bad nicads that will work like a new one. Little buggers will last forever if you slapem around every once in a while. And remember to unplug your cordless phone and leave it on once a month or so till the batteries run down, dont keep putting it back on the cradle every time you use is or before long you will HAVE to put it on the cradle every time you use it because it wont hold a charge. Go ahead and quick charge your cordless drill batteries with a car battery till they get warm every once in a while if they run down while you are working on your car, It may not be a full charge, but it'll work for a little while. before all you nicads-are-fragile geeks write me hate mail, I will say this. I gotta bunch of nicads that people threw away; peeled off the package so i could get to each individual cell (cant zap the whole pack at once) hit em with the astron and test leads and put-em in all the kids toys and everything else that I can think of, and still gotta lot of em left. nicads are cool.

If someone want to give you a circuit, computer program and fancy holders to care for your nicads, thats ok too. I HATE to unsolder nicads and solder them back (lazy). just check each cell with a meter and you'll find it. no set values. It wont be less than a certain voltage itll be 0-volts, easy.
have fun and if you can touch it for more than 5 seconds it ain't too hot.

Hello American amateur stations!.

This is JH1WCD from Japan.
I will go to Boston July 14th - July 20th.
So I want to visit some Ham shop in Boston area and ARRL.
Please let me know how to get Ham shops and ARRL.
I'm using lent a car.

And how about National Radio Company in Boston.?
I want visit this famous Company ruins.

Any other information (surplus shop,restaurant...) are
welcome.!

>Jeff NH6IL
Most Amateur manufacturers are making less 220 MHz equipment today
since 220 MHz Amateur can only be used in 2 countries around the world.
2m and 440 MHz Amateur can be used in over 130 countries. So we will
see a more and more 2m and 440 MHz gear. Very little 220 MHz gear in
the future. Don't forget 1.2 GHz band (1240~1300 MHz). You can now
use 1.2 GHz amateur gear in over 40 contries..

You'll have to take that question up with Madison and the other
Federalists. The Constitution was ratified in 1788 over the
objections of men like Jefferson, Henry, Jay, Mason, and Lee
who didn't want such power concentrated into the hands of a few.
So I guess you could say that's when Americans lost their
freedom. I doubt many would agree that the freedom of Americans
was lost with the signing of the Constitution, but that is the
basis for our treaty obligations.

Of course treaties can be abrogated, that's what war is for,
but it's not a step to be taken lightly.

>short-wave)
>MW - Medium Wave, also medium frequencies, between 500 kHz and 3 MHz
>(you'll find the AM broadcast band here).
>LW - Long Wave - frequencies below 500 kHz

There's a pattern here. MW is 300 kHz to 3 MHz, and LW is 30 kHz
to 300 kHz. VLF is the area below 30 kHz. UHF stretches from 300 MHz to
3 GHz. Each step is a decade, and each breaks with a most significant
digit of 3. You had VHF and HF right, but missed on the others.

>SWR - Standing Wave Ratio - a measure of antenna and feedline performance

Actually, more appropriately VSWR or ISWR designating whether you are
talking about voltage or current standing waves on the transmission
line. The particular value obtained may indicate good or bad things
about your transmission system depending on many variables which you
must factor in for any given measurement. A broad flat 1:1 VSWR may,
and often does, indicate something grossly wrong with your antenna
system. Remember, a dummy load has a flat 1:1 VSWR, but it's a lousy
antenna.

All a 1:1 VSWR indicates is that the load impedance matches the
characteristic impedance of the particular feedline you are using
at the frequency of measurement. This may be good or bad. For example,
if you are feeding a short vertical with a calculated base impedance
of 5 ohms using a 50 ohm cable, a 1:1 VSWR indicates you have 45 ohms
of loss resistance, and a horribly inefficient antenna system.

>DTMF - I forget what it stands for, but it's the tone system used in
>push-button phones and in many VHF/UHF amateur rigs for making phone calls
>and controlling various repeater functions

Dual Tone Multi-Frequency, also called Touchtone(tm). Each digit is
encoded as a pair of tones. The tones are arranged in a matrix following
the pattern of the typical TT pad on a Bell System phone.

Only in *your* mind, Larry. Those of us who support making amateur
radio code test free don't necessarily wish to ban any form of
alphabetic encoding, or any form of carrier modulation in current
use. Many of us do expect usage of manual OOK Morse to wither away
over a period of time as better techniques displace it, much as AM
voice has withered away in the phone arena as the better SSB techniques
caught hold, but we don't call for a ban on its use. If you're still
around in 2020, you'll still be welcome to beep to your heart's content.

This is nonsense. Manual Morse is nowhere near the top of the most
valuable skills an amateur can have, nor has it held an important
place in emergency communications for a long time. Over 90% of
emergency communications by amateurs is tactical in nature and is
conducted primarily on VHF/UHF FM voice. The remainder, mostly
bulk health and welfare traffic, is handled digitally on HF, or
by HF voice. It is now so rare as to be a major amateur news event
when manual Morse is used for primary emergency communications.
There are just too many better alternatives available.

> It all boils down to one thing...laziness on the part of those who

> class envy.

At least some of us pushing for a code test free amateur radio, do know manual Morse. Many of us were licensed at a time when there was no alternative to passing a Morse test. Some, such as myself, have even been amateurs long enough to remember when *use* of Morse Code was actually a valuable skill for emergency and public service communications. I handled thousands of serviceman messages in the 1960s by Morse because that was the way it was done then, though we handled as much as we could by RTTY even then. But newer digital methods have replaced the old brass pounding days now, and I think that's a very good thing. The new methods are faster and more accurate ways to get the message through.

> speed digital communications a day, at least! NOT!!!

That's *your* perspective. From my vantage, the code test free Tech license has been a badly needed breath of fresh air into amateur radio. We're growing again, the average age of licensed amateurs has stopped increasing and may actually be declining (we won't know the latter for sure until the ten year license renewal cycle purges many of the silent keys from the roles). Many of our clubs have been revitalized by the newcomers, who by and large are eager to do things and eager to learn things. Like any incoming freshman class, they have a *lot* to learn, and are looking for good mentors to show them how to do things.

If you offer them an open hand of friendship, it's been my experience that they respond well. However, if you give them the back of your hand, or run off and hide on your private UHF repeaters, or the bottom of the HF bands, then they adopt role models you may not like much. Testing has little, if anything, to do with any of this. The new freshmen will emulate the upper classmen. If you set a bad example, they'll follow. If OTOH you offer good leadership, they'll follow that too.

It's always been this way, the only difference now is that growth rates are back up to the healthy levels they were in the 1950s and early 1960s rather than being at near stagnation levels as they have been for most of the post '68 years. So naturally, you are seeing more newcomers than you have gotten accustomed to seeing. Prior to the code test free Tech license, it was unusual to meet one new amateur a month. Today, it is rare *not* to meet one new amateur a week. This is a wonderful opportunity to help the service grow and prosper in the coming years, unless you turn your back and throw the opportunity away.

When I was first licensed at the beginning of the 60s, I was as green as any of the new Techs (oh, sure, I could beep a little, but that didn't mean squat). It was thanks to some very patient mentors that I learned how to expand my horizons and become a productive member of the amateur radio community. What are you doing today to be a mentor? I'm certainly doing all I can to repay the patience and hard work that my memtors spent on me during my first years in the service.

Well, with that attitude, we can all certainly hope they aren't unfortunate enough to talk to *you*.

51. W5YI course at RS?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-01 00:00:00 UTC
From: clifto@indep1.chi.il.us
Message-ID: <DB1oH5.Dz@indep1.chi.il.us>
Source record: 243305

I noticed Radio Shack carries a $30 no-code license course software package from W5YI. It looked interesting, but I didn't get much info from the "liner notes". Has anyone seen this software in action? Is it any good? If so, I'm planning to do the elmer thing for a few people who've shown interest.

Yeah, it's probably run out of electrons from throwing out all those
electrostatic fields. They can put extra vitamins and minerals in our
food, why can't someone come up with a process to reinforce antenna
materials with extra electrons?

There is no easy way. The earth around the rod are going to cling to the rod and hold it down. A back hoe and a bull dog grip are what we use at work. I am a industrial electrician and have this problem from time to time. Spend the ten bucks.

I have the same prlem and I believe that the deed restrictions cannot be
overcome. A deed restriction is a voluntary contract entered into by
several paties. It were a law you could fight it. A signed contract would
be a tougher cookie to crack. I am afraid a court would tell you that you
signed it and will be required to live with it.
Sorry,

Lewis

58. QCWA announces WWW Home Page

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: genewill@efn.org
Message-ID: <3t6dbe$130@haus.efn.org>
Source record: 243140

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World Wide Web Home Page, available by either text or graphic browser at

http://www.efn.org/~qcwa

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham licens e on or before January 1, 1970, you're now eligible). Included on the Web page are:

- Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
- Database of local Chapters (nearly 200, worldwide), including name, address, and call of Chapter Secretary
- Listing of on-the-air Chapter meetings
- Details of upcoming National Convention -- with photos, as soon as we receive them
- A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
- Rules and schedule for QCWA Phone and CW QSO Parties
- QCWA Memorial Scholarship Program
- Criteria for and recent winners of QCWA Awards
- A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
- Links to other interesting ham-related Web sites.

Please visit QCWA on the Web . . . and take a moment to email General Manager Jim Walsh, W7LVN (jwalsh@efn.org) with your comments, corrections, and suggestions. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

62. QCWA Announces WWW Home Page

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: genewill@efn.org
Message-ID: <3t6dds$14c@haus.efn.org>
Source record: 243144
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World Wide Web Home Page, available by either text or graphic browser at

http://www.efn.org/~qcwa

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham licens
e on or before January 1, 1970, you're now eligible). Included on the Web page are:

- Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
- Database of local Chapters (nearly 200, worldwide), including name, address, and call of Chapter Secretary
- Listing of on-the-air Chapter meetings
- Details of upcoming National Convention -- with photos, as soon as we receive them
- A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
- Rules and schedule for QCWA Phone and CW QSO Parties
- QCWA Memorial Scholarship Program
- Criteria for and recent winners of QCWA Awards
- A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
- Links to other interesting ham-related Web sites.

Please visit QCWA on the Web . . . and take a moment to email General Manager Jim Walsh, W7LVN (jwalsh@efn.org) with your comments, corrections, and suggestions. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

67. Info on launching balloons with Amateur Radio needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: ve4mjm@draco.bison.mb.ca
Message-ID: <3t6hfq$8p9@draco.bison.mb.ca>
Source record: 243149

I am looking for info on all aspects of launching weather balloons carrying amateur radio equipment and experiments. Some places that I know of that have launched balloons are in Iowa, Colorado, and I believe Texas. Any and all information on radios, TNCs, antennas, telemetry, control, packaging, size and type of balloon, launching and recovery, liability, and any other details or pointers to sources of info will be greatly appreciated. I am especially interested in the experiences of other groups who have done this type of thing.

Thanks in advance

Michael Markmann

Hi
I have an MFJ that has received about 30 minutes of usage.
It has three settings QRP, Moderate power (0-60 watts) and High
(0-300 W)! All manuals aand original packaging are intact. EMAIL me
or call me for details and price.

> needed (though please feel free to inform me on that, too)
Reciprocal Licenses are available to US amateurs. The ARRL will send
you the details and paperwork on request.

> .....so I'm looking at 2m. (Is there a 70cm ham band in the UK?) The
> ARRL repeater directory
Yes there is a 2m and 70cm band in UK with repeaters on both bands. All
repeaters are open for public use and have call signs starting GB3...
You can get a list of repeaters from the RSGB
Llamda House, Cranbourne Rd, Potters Bar, Herts, EN6 3 EJ, UK. for a
modest cost .

>I understand that most (all?) repeaters there use 1700 (or is it 1750?)
> Hz tone burst activation and of course my US-featured radios don't do
> that.
> I'm not sure I can whistle reliably enough. I know that most of the
> feature
My advice is to get one of the "metal silent dog whistles" from a pet
store. they can be tuned to 1750 Hz fairly easily cost < $5 .

Hey Keith, knock it off. Tom wants to upgrade - encourage the fellow.

Tom: Whatever Morse trainer you use here is a bit of unusual advice.
Once you know the alphabet and numbers, start off each practice session
at an extremely fast speed, such a 25wpm (no kidding!). After a few
minutes of just listening (no writing), slow it down to say, 20wpm.
Each minute or two decrease until you finally get down to the speed
that you were able to copy at the previous day. You'll be shocked
that yesterday's speed will seem so slow!

Never stay at a speed you feel comfortable with - when you're able
to get 50% copy at one speed, move up a notch. Don't wait for 100%
copy to occure before you move up.

Also, set the *character* speed for 22wpm - you don't want to hear
the individual dit dah of the letter A - you want to hear just
the single didah sound. So at say 7wpm the characters will be sent
at 20wpm with lots of space between characters. This is one of the
most important techniques in learning the code - hear the sound of
a character, not its individual elements.

Spend some of your practice time *not* writing anything. Just sit
back and relax and listen. Do some work in the shack with the
code running. When you're in the shack preparing some coax for
an antenna or whatever, keep an HF receiver on a fast CW QSO
and passively attempt to do some `head copy'. After awhile you'll
start picking up bits and pieces of the QSO. Keep at it and
you eventually not have to write anything down. That's when
Morse starts sounding like a language - music to the ears!

73 from Hawaii,
Jeff NH6IL

It's a L O N G time since I was Hamming in U.K., but I can assure you things are still humming along under the care of the RSGB (Radio Society of Great Britain) ... they have monthly mags etc, that surely should be aroun din USA (we get them easily here in New Zealand !) Try Short Wave Mag etc. Do you have WWW access ? I believe they are email contactable too. BTW most hand helds have options to switch in that 1700Hz tone as needed, so you wonted need to whistle ! I just shared this with my South Pacific buddies on 20M. They all
laughed since there's no internet connection on the islands they
live on. One fellow didn't laugh, though. His only response was
"What's internet?"

>From Wyatt nothing, not responsive but at least not insulting. From Herman
>a very full of him self (or full of something) e-mail requesting that I not
>darken the door of his e-mail but to only respond in news groups. Ok Jeff
>here it is:

Hi Gerald, you have my permission to show the entire world the email
I wrote you. I thought it was very nice. You're lying through your
teeth calling it insulting. You shouldn't have to resort to slander
to defend your position. Accept my dare and post the email.

Should Gerald back down and not post the email let me say that I
began by telling him that I do not want the code debate carried
into my mailbox. To see an anti-code email when I arrive for work
in the morning (when I was only expecting personal and math-related
email) is distasteful. I asked him to keep the code debate on the
newsgroups. He ignored my request and insisted upon sending me
another.

Included in my email were some of my reasons I felt the code should
continue to be tested for - here's the exact paragraph:

``We are the last line of communications for our city, county, state,
and nation. This is demonstrated each year when hams are called upon
to provide communications in place of professional systems distroyed
due to Nature displaying her strength and fury. Because of this tre-
mendous responsibility we carry (and this responsibility is one of the
reasons for the existance of our service - see section 97.1 of the CFR)
we sould be able to demonstrate the ability to communicate with as little
hardware as possible. We should be able to use our given senses in
place of relying upon exotic equipment. Manually encoded CW, along with
our sense of hearing and our mental powers, provides an unfailable means
to conduct communications in any situation imaginable. Every HF amateur
worldwide has a CW-capable transceiver at his/her fingertips. VHF FM
will not provide reliable communications for the passing of statewide,
national and international traffic during times of widespread disaster,
due to the limited propagation at those frequencies and because widespread

power outages will disable repeaters (or their battery banks will eventually die). Thus, all amateurs wishing to be awarded the privilege of operating below 30 Mc should fully meet the code requirements as set forth by the ITU. CW might not be everyone's mode of choice for their daily ham activities, but it must remain the common denominator of all hams worldwide.''

Not bad, huh? No insults thrown at all.

>...lid filter.

Another lie! I've always said that the code is not a lid filter - just witness all the lids on the phone subbands. Almost anyone can pass today's fill-in-the-blank code test; some pass just by guessing. My contention is that there are very few lids on the CW subbands.

>In fact the ravings by you and Mr. Wyatt do

What ravings?

>If the non-responsive replies from
>you (twice)

Another lie. I responded with the above long paragraph ``*''.

>and Wyatt are an indication of the comprehension of CW ops
>it proves my point that they copy little and assume much.

Run that by me again - copy what? Assume what?

>A quick visit
>to the May call cdrom shows Herman a general. Why not advanced or extra?

Well, first there was the B.S. in Math to earn. Then there was the M.A. in Math to earn. Now there is the Ph.D. in Math to earn. I promise I'll upgrade when I finish my academics.

>Perhaps too technical? Inquiring minds want to know.

Nah. I have trouble with the 20wpm code - it's too slow. Too technical? Remember, I'm the one asking everyone to go back to building at least some of their gear. We've got too many appliance operators and not enough homebrewers.

>

Why didn't you sign your slanderous post, Gerald?

WESTERN NEW YORK ATV HIGH ALTITUDE BALLOON

The ATV Group of Western New York will launch its second high-altitude helium balloon on Sunday, July 9, at 9 AM EDT. The launch will be conducted at the Batavia Hamfest in Alexander, New York (approx. 30 miles east of Buffalo and just south of Batavia).

Live ATV will be transmitted on 439.25 Mhz, with a video overlay displaying WA2CXW and altitude, temperature, and other information. Morse code beacon on 2 meters.

Amateurs monitoring the balloon's signals are invited to check into the voice net on 7.290 MHz (or just a little lower) starting at 8:30 AM EDT. No scrub date set at the time of this writing (7/2/95).

Location: Western New York
Date/Time: July 9/ 9:00 AM EDT
ATV: 439.25 MHz (articulated mirror camera)
Morse Beacon: 144.340 MHz (1 watt)
HF Voice Net: just below 7.290 Mhz at 8:30 EDT
Launch director: Roger Garbacz, WA2CXW

posted by Hank Riley, N1ATV

Please email for further info
or to submit news of upcoming balloon launches
for distribution on the Net.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is: http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 213
BID: $OPDX.213
July 3, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, KE2LJ, K4CEF & Southeastern Cluster Group, AA8SM, N8HTT, K9RHY, 425 DX News, 9V1YC, BV5AF, CT1ENQ, DL6RDE, G3NYY, ON6TT and G4BUE & DX News Sheet for the following DX information.

5A, LIBYA. Five Ukrainians will be going to Libya on July 3rd. They will be flying from Kiev to Rome (July 2nd), Rome to Malta where they will be met by the Libyans. They will then board ship on July 3rd for the crossing to Tripoli. This is an official visit where they have been invited by the Bureau of Communications. They received their official visas on June 28th, which are good through July 28th, but plans call for them to return to Kiev on July 24th. They expect to receive the official license 100% due to the official status of their VISIT, where they will be founding and setting up a Youth Radio Club. The team will consist of UT2UA, UT3UY, UT3UX, UX4UM and a Vice-President of the Kiev International Youth League. The Dxpedition is the result of three years work of the Ukrainian Minitries and Government. Due to not having the confirmed information far enough in advance, they were not able to get the equipment they needed, although Cushcraft is trying to get a beam to them in time. It has also been reported that the Ukrainian delegation will be using the callsigns 5A3UY and 5A2UA for 15 days. As in all major DXpeditions, the Ukrainian team had to use their own money, and have taken loans from banks with the hope of receiving help to repay the loans after their completion and accreditation of the Dxpedition. Contributions will be solicited only after the accptance by DXCC Desk. INDEXA with John, W4FRU, will handle the QSL cards, if the operation takes place and is accepted by the DXCC Desk.

5X & 5Z, UGANDA AND KENYA. Paul, 5Z4FO, is currently active from Kenya, but plans to be active as 5X1MW from Uganda when he leaves Kenya in July. QSL via KB4EKY.

7W, ALGERIA. (ATTENTION PREFIX HUNTERS) Moktar, 7X5JF, is currently active as 7W5J to celebrate the Independence Day of Algeria. He will continue to be active under this callsign until July 4 or 5th. QSL via 7X5JF.

A5, BHUTAN. There have been reports that Jim Smith, VK9NS, is currently in Bhutan. No other details are available at this time.

BV9G, GREEN ISLAND (TAIWAN). Oprerators from CTARL (BV8YA, BV8YB, BV8AB, BV8BC and others) will be active as BV0ARL/BV9G, from July 20-25th. Activity will be on the IOTA HF frequencies and VHF/UHF. QSL via BV8BC and/or CTARL Bureau, P.O. Box 73, Taipei 100, Taiwan, R.O.C..

CT1, CULATRA ISLAND (PORTUGAL). The Northern Portugal DX Group (NPDXG) and Radio Clube de Loule (RCL) are organizing a Multi/Single entry in the 1995 IOTA Contest from IOTA EU-145 located in the Algarve Province Group. The team plans to activate the station a few days before the IOTA contest on all bands, all modes, including the satellites. During the IOTA contest (July 29-30th) they will be active as CQ2C (requested callsign) on SSB and CW. QSL Manager for Europe will be CT1EEB and for North Americans via WA1ECA. The NPDXG team will be: Pedro/CT1DNF, Jose/CT1EEB, Miguel/CT1ENQ, Luis/CT1ESO, Ruben/CT1ETZ, Rui/CT1FAK and Pedro/CT1FDR. The RCL team will be: Celestino/CT1ASU and Rui/CT1ERY.

D2, ANGOLA (UPDATE from Peter). Peter, ON6TT, is planning to use the callsign D2TT or D3T. QSL route will be ON5NT. He will be there July 7th through August 28th and plans to be an entry in the upcoming IARU contest. His bands of activity will be on 160-10 meters, with emphasis on the WARC bands, the Lowband and RTTY. Most of his operations will be on SSB and RTTY, but will take CW requests if the pile ups are not too fierce. This is a tour of duty as telecom consultant for the Red Cross, not a DXpedition. He will be as active as much as he can, but will have to move about in the field a lot. When he is in Luanda, look for him during his morning and evening, and on the weekends. NOTE: Peter will have beacons on 160 and 10 meters. During the day, while he is out, a beacon will run on 28203 kHz. When he is home sleeping, he will run a topband beacon on 1821.5 kHz. The beacons will go:
V V V V V V DE <HISCALL>/B DE <HISCALL>/B
Peter would like to hear QSNs to help him determine when he should be active. Reports can be accepted over the air or send via InterNet to:
ifrclad@angonet.gn.apc.org
Note his name clearly in the message body and PLEASE DO NOT use this address for skeds or anything else.

ET, ETHIOPIA. Two stations from here have been quite active on 20 meters. Daniel, ET3AA, has been keeping the SSB group happy on 14224 kHz starting around 0200z. QSL via P.O. Box 60258, Addis Ababa, Ethiopia. ET3YU has been keeping the CW group happy on the lower end on 20 meters starting around 2230z. QSL via YU1FW.

HG1, HUNGARY. The DX New Sheets report that between July 1st and December 31st, the special station HG100R will be active during the Centennary of the Radio. QSL direct to: HA1KSA, P.O. Box 79, Gyor H-9002, Hungary.

NORTHERN IOTA DXPEDITION. Frederick, VE3VRO, states he will be active July 10-13th, from Banks Island (NA-129), which is located in the Arctic Archipelago Islands Group. He will also be active July 14-17th (only between 0000-0300z) from Herschel Island (NA-193), which located in the Yukon Territory Group.

PY0, TRINDADE. According to the DXNS, Sergio, PU1LOK, is active as PU0TRI, but can only operate SSB on 80 and 10 meters (28300-28500 kHz). He will be on the island until October and will then answer QSL cards. Currently there have been no QSNs reported on the Ohio/Penn Network. QSL to Sergio S. Mendes, Rua Visconde de Santa Isabel, 692 apto. 202, Grajau, 20560-121 Rio RJ, Brazil.

SV5, DODECANESE. Ralf, DL9GTI, will be active from Rhodes Island (EU-001), July 1-19th, as SV5/DL9GTI/p, working a QRP station of 5 watts and a long wire antennas and verticals for 40 to 10 meters bands. Ralf will join the IARU HF and the AGCW QRP Summer Contests. QSL homecall.

T30, WEST KIRIBATI. Dave, T30DW, has been heard on 14208 kHz around 1200z. He is a native from Australia and will be active for the next two years. QSL to PO Box 29, Bairiki, Tarawa, Republic of Kiribati.

VP8, SOUTH SHETLANDS. Andy, VP8CQS, has been active on 40 meters on both CW and SSB. Europe reports hearing him with a good signal on 7004 kHz CW around 2100z and on 7050 kHz SSB around 2145z. QSL via DL1EHH.

VU2JPS UPDATED. James, 9V1YC, reports recieving VU2JPS's license document from Mani and will forward to the DXCC desk for approval. The document is essentially his normal Indian License from Madras, but with the "Station Location" and inspection approval from Port Blair, Andamans. The official inspection stamp is from the Andamans. KYFC!!

XT, BURKINA FASO. Ed, XT2CH, was heard on 14160 kHz around 1945z. QSL via XT2CH - Ed, c/o American Embassy Burkina Faso, Department of State, Washington, DC 20521-2440.

DXAC NEWS. The ARRL DX Advisory Committee (DXAC) voted 15 to 1 to suspend further study of the status on Aruba until the Netherlands and Aruba have announced a change in the current move towards independence for Aruba originally slated for 1996. In the same ballot, the DXAC voted 9 to 7 against recommending the addition of Scarborough Reef to the DXCC countries List. Those who voted against the recommendation cited membership opinion within their respective divisions. Some went on to state an opinion that the rocks that comprise the reef do not constitute islands, and for that reason no operation from the reef can be considered ''land based.'' For details, read ARRL DX Bulletin ARLD035.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and

after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>owned (an IC-02AT and now an IC-W2A), had this white sticky stuff inside.
>In the W2A, it is on the metal sides of the RF stack units (I don't remember
>where it was in the 02AT), and I tend to get it all over my fingers when I
>open it up. Anybody know what this stuff is for?

This is from the original poster:
Okay, okay, okay! Thanks to everybody who answered, but no more
please! From the 20 or 30 responses I've gotten, I now know that this stuff
is heat sinking compound used to fill thermal gaps between hot stuff and the
metal case or heatsink (or that idea, anyway). Good thing I didn't wipe it
all off or something :-). And I guess it's working, because the case of my
W2A gets awfully hot at 5 watts.

Thanks everybody!

As was said before... spend the $10, or dig a big hole.

>=>I'll be installing the rod into a new location. I got the first
>=>rod into the ground with brute force; can anyone give some
>=>ideas on what might be easier ways to get a ground rod into
>=> the earth?
>=>
>=>James Messer
>=>KE4LAY

Ground Rod installation:
Large steel pipe, 2.5 foot plus or minus, smaller pipe, 1/2 the
length of the large pipe, thread on end caps for both.
Smaller pipe is just a bit bigger diameter than the ground rod.
Fill larger pipe a little mor than 1/2 full with cement (no rocks)
and push smaller pipe into larger (end cap first) till flush.
Fill any remaining space with cement (plug small pipe with rag).
Let set, and remove rag plug on small pipe.
Weld rebar handles to large pipe near the middle.
Insert small pipe over ground rod, and lift handles.
Let go.

For faster insertion mix lead shot into cement.

Also, Possibly one of your local Electricians might have
this monster allready made.

Disclaimer:
Consult your Doctor before trying this or any other excercise
program.

73 de Shawn, N7XBM.

Something that should probably be noted at this point is that the Ham
Radio FAQ is currently an unmaintained and unposted resource. Since the
above Web site is driven by articles posted to news, it is likely to
disappear in the next few months.

The following entry from my Amateur Radio Elmers Resource Directory,
posted below, should explain the state of things (basically, Ian is
burned out and has other personal and professional obligations).

++

Ian Kluft KD6EUI PP-ASEL
ikluft@thunder.sbay.org (home) ikluft@oes.amdahl.com (work) Santa Clara, CA

Former Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://ftp.uu.net/usenet/news.answers/radio/cb-faq/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience.

The FAQ's were posted with the AUTO-FAQ software, which is written in Perl. So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact me at my E-mail address above.

The rec.radio.amateur.* Working Group Mailing List is now being maintained by Jack Hill. See his entry for subscription information.

I'm looking for a copy (or original) owner's manual for the Tristao TMS-771
(71' Heavy Duty) tower and the RMC-1000 Remote Control unit. I'm trying to
find out what the manufactures recommended maintenance procedures were as
well as schematic diagrams for the motor drive/remote control systems.

Any info is greatly appreciated.

73, Steve
KC7EM

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 JULY AND FORECAST FOR 02 JULY - 04 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 30 Jun
Daily Proton Fluence >1 MeV: 2.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.0E+07 (normal)
X-ray background: A9.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Jul 03 Jul 04 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Jul: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled.

Estimated Indices : A K Observed A Index 30 Jun
Learmonth 11 4322 2322
Fredericksburg 12 12
Planetary 15 13

Observed Kp for 30 Jun: 3223 3334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Jul 6 Quiet
03 Jul 6 Quiet
04 Jul 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

01 Jul normal fair-normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Jul normal fair-normal fair-normal
03 Jul normal fair-normal fair-normal
04 Jul normal fair-normal fair-normal
COMMENT: Conditions at mid and high latitudes may have been
degraded early in the UT day on 01 July, due to geomagnetic
activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
01 Jul 35 enhanced during local night by 30-40%

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 Jul 20 near predicted monthly values
03 Jul 20 near predicted monthly values
04 Jul 20 near predicted monthly values
COMMENT: Townsville MUFs: occasional night-time Spread F.
Hobart MUFs: daylight depressions of 15-20%, night-time spread F,
occasional Sporadic E layer. Regular sporadic E layer and
night-time Spread F observed at Sydney.

Since you have a space/height problem, just put up what you can and
use it. In many cases like yours, a good antenna tuner is a big
asset, it may allow you to load whatever form of antenna that you
can get into the air. I have found that low antennas can be somewhat
directional in unpredictable ways due to the close proximity of
surrounding objects. Put it up and see what you get, it will
certainly be better than nothing. Later you can try moving things
around to see if it might work better (or worse).

I personally use a 102 foot wire at about 25 feet strung from house
to tree to tree, it is painted with black, then green. then brown
paint to keep it from being obvious, and I feed it in the center
with ladder line just long enough to reach the tuner in the shack.
It's not the best, but it works, and the neighbors haven't called
in the covenant police yet.

In case you need a directional antenna for the low HF bands, first
get your antenna farm plot of ground (with no restrictions)
and go from there - the rest is easy by comparison.

GL & 73,
Don W3FPR

In article <3t4fhr$hhv@news.iii.net> dts@peanut.senie.com (Daniel Senie) writes:

>interaction with your rig (if using SSB and hard keying). Mirage puts
>stickers on the product indicating that opening the box voids your
>warrantee. On consumer gear I suppose you can get away with that, but it's not
>usually appreciated in the ham marketplace...

Although this has nothing to do with the previous topic, the talk about
opening up equipment made me think of this question: Both Icom HT's I have
owned (an IC-02AT and now an IC-W2A), had this white sticky stuff inside.
In the W2A, it is on the metal sides of the RF stack units (I don't remember
where it was in the 02AT), and I tend to get it all over my fingers when I
open it up. Anybody know what this stuff is for?

Thanks,
Russ KI7FL

Well, I finally got some paperwork for my IRCI CW filters for the
TS 940, I thank those who replied and offered help. I had explained
that I received obnoxious treatment from IRCI, and also got some
similar reports from others.

Well, now I HAVE the paperwork for the TS 940 CW filters from IRCI.
If anyone needs it, I am happy to help you :-) .

98. ARTOB launch on 07-02-95

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: welp@uni-muenster.de
Message-ID: <3t4svl$gi2@majestix.uni-muenster.de>
Source record: 243320

The Nienberge Amateur Radio Group (N46 of DARC) will launch an ARTOB this sunday.

Location: Sch&#65533;ppinger Berg (NW Germany) JO32PC
Date: Sunday, 07-02-95
Time: 12:00 UTC (Launch)
Drifting direction: probably to W/SW

The balloon:
Call sign: DL0ART/am
QRGs: 145.200 MHz: data and call sign in cw;
also downlink when switched to repeater mode
29 MHz: uplink when switched to repeater mode; if so,
the exact frequency will be broadcasted on 145.200
Mode: FM
ground teams: talk back on DB0EG (R71),
later on DB0PD (R84)

This will probably be a 2 or 3 h flight.

Any response and or reception reports will be highly appreciated. You may use the talk back frequencies for (short) reports (coordinator is DL3YBQ), or send a QSL card to DL9QJ via the buro. Any participation in using the repeater (if working) is also welcome, but please: use your ham spirit...

The N46-ARTOB team is looking forward to all responses, suggestions and especially reports.

I am aware that this information will only concern to hams living in the northern part of Germany or in the Netherlands, but maybe the balloon's sigs will be heard in even more distant places...
Please forward this message to any ham who might be interested!

For more information, please contact Oliver, DL9QJ (see below).

I'm sorry that this message is posted only abt 40 h before the launch, but that is the time when we decide about it.

Best 73, Oliver

>except to say that no batteries were required.
>

I don't remember the Beardslee specifically, but there were many
different types of actuator arrangements out there, even that early. If you're
in the Washington area, there's a nice exhibit at the Museum of American
History about the evolution of data processing (which, BTW, has a station run
by a local amateur group as part of it). It includes several arrangements for
"no-code" transmission over telegraph. One of the earliest used a series of
arrows that could deflect one of two ways. I think the system used different
wire pairs for each arrow. The letters were arranged in a diamond formation
(like if you put all the letters of the alphabet around the outside of ARRL
symbol and put a series of arrows horizontally across the middle of it). The
arrows would deflect and point out a letter. The transmitting station was a
rotary wheel, I think. You selected the letter to be sent and made the
connection. It looked like the recieving end broke it (signifying copy, I
assume). Anyway... I'm not really a historian, but I really liked the exhibit.

I've had a ground rod installed in a location for about a year, and now I'm moving. I'd like to take the ground rod with me (ten bucks is ten bucks, after all), but I'm not sure the easiest way to get this rod out of the ground! Can anyone offer suggestions?

I'll be installing the rod into a new location. I got the first rod into the ground with brute force; can anyone give some ideas on what might be easier ways to get a ground rod into the earth?

Thanks for any info!
James Messer

103. Antenna Deed Restrictions in Flordia

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: Don Latimer <DLatimer@ix.netcom.com>
Message-ID: <3t5br7$c44@ixnews3.ix.netcom.com>
Source record: 243325

Fellow Operators:

I live in a deed restricted community in the Tampa Bay area. I should have known better. Anyway, there is an antenna restriction that prohibits all types, including satellite dishes since the restrictions were drafted in 1980. Seems to me they are a little outdated with the pace of technology. If I decided to erect the tower that I've wanted since I was 12 years old, what are my changes of being successful at challenging the restrictions? Has anyone in this area had a simular experience? I am new to the Bay area (and Flordia in general) and don't know where to start researching this. I am assuming that what is imposed on me is a restriction from the local home owners association and not a local city/county ordinance, because I see all types of antenna farms in other non-restricted communities. Its hard for me to believe that these restrictions carry any weight in regard to amateurs with the frequency of emergency management activity in this area and its value to the community. Any direction, suggestions, or support you can provide via EMAIL or this newsgroup would be most helpful. TNX

73,

Don, N5KHB

104. Make your own Descrambler

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-02 00:00:00 UTC
From: jphudy@aol.com
Message-ID: <3t5d03$pp9@newsbf02.news.aol.com>
Source record: 243326

You can build your own cable descrambler for under $15 using parts you can
get from your local electronics store(Radio Shack). For instructions, send
$3 (cash or money orders please)
and a self addressed stamped envelope to:

S. Keeley
PO Box 3521
Erie, PA 16508

You will receive:
-parts list
-assembly instructions
-full reprint and resell rights

With a descrambler, you can get the premium channels(HBO, Cinemax,
Showtime,
Pay Per View, etc.) for free!!

No electronics background required.
For educational use only

Lowest Price available!!!!

105. Re: CW is here to stay !!

> > necessary test equipment.

> Well, lets see, what kind of parts are you going to make them use?

They can use any parts they'd like. But they should be prepared to
explain how each stage operates.

> And (sic) old 1625 tetrode with the base knocked off to gain access to the
> screen grid? What chassis materials (if any) are required. Transistors
> ok as long as they are point contact germanium? How about capacitors.
> Waxed paper and glass too modern, should we use Leyden jars instead?

> > very well spent.

> Only 5-10 minutes to demostrate that the rig works at all, or to spec all
> the performances. Such as spurious radiation, phase noise etc? Or just that
> it doesn't set the examiners table on fire?

A spectrum analyzer should be helpful.

> > To those who will balk and say that they aren't going into ham radio
> > to build things, I ask them to explain why they're being tested on
> > basic electronics (Ohm's law, reactance formulas, resonance formula).

> They ask these things because they have some bearing on electronics in
> general...

Reactance and resonance formulas are pretty specific to RF.

> That sort of stuff.

Very specific comment. Pretty well sums up your article.

> Besides, even this wouldn't work. Not 20 minutes after the FCC released
> the R&O, Gordon West and W5YI would have License Transmitter Kits on the
> market.

Say Angus, there are already kits on the market. The folks on the
QRP email list seem to believe that kits are homebrew (I disagree).
Certainly the VEs would be able to spot a commercially made p.c. board.
Point-to-point, `dead-bug', or a homebuilt p.c. board could be among
the wiring options.

> Besides which, I thought CW was supposed to act like the lid filter. How
> can soldering a few parts together from a Gordon West kit do that?

The xmtr can operate any mode. And CW is not a lid filter - just listen
to the voice subbands. The fact that HF lids exist shows that just about
anyone can pass a fill-in-the-blank code test.

> "Ideas are more powerful than guns. ..."

Ideas won't blow your head off. You love to quote Hitler and Stalin -
are they your heros?

Jeff NH6IL

The warning about household wiring was something I hadn't considered.
After reading your message, I have started to consider a different
location for the wire. I think I can get the center up about 20'-25' and
the ends about 12' by adding a couple of more bird houses in the back
yard. This would let me stretch it out above the back fence which is 72'
long. I'm going to try both for a couple of days and see which if any
will hear better. I'll be glad when the next exam day comes. I think I

have the written, now if the code will come.

Lewis

: prohibits all types, including satellite dishes since the restrictions
: were drafted in 1980. Seems to me they are a little outdated with the

DOn: it is an uphill battle. I lived in a homeowners area for 10 years till my new wife and I moved to a larger house in january. I was able to get a tower there but it was due to the work of another ham/owner who did some behind the scenes work before the association was turned over to the homeowners. I did, tho, file an official application before he started all that.

Your best bet is to get the ARRL kit and draft an application to ur architectural board or BofD asking for a waiver. Load them down with paper and documentation. Tell them u want to appear before the board to plead ur case.

Then get your local RACES/ARES group to help u out. Instill the fear of what Andrew did and how amateur radio played a pivotal role in florida.

The other alternative is talking to an attorney familiar with radio and condo law (arrl can help there too to point u to someone in ur area) and see what they have to say.

Exactly what is the wording in the documents?

Take care Leon WA4ZLW

>step.
>--
>
Bob's method will work. I am fortunate enough to have a tractor and I
use the hydraulic hitch instead of the car jack. I also made a
pipe lever, about 4 foot long, with a short, hinged leg near the front
and an attached piece of chain that wraps around the object in the
ground. I use this device to pull electric fence posts. The type of
soil varies the grip mother nature puts on the rod so your mileage may
vary. I am an electrician and have nearly lost fingers over the years
pounding ground rods. One of my favorite tools is a metal handled wood
splitting maul called the monster maul. I place the hollow handle over
the ground rod and work it up and down. This holds the rod while driving
it and saves the fingers as well as the need for a helper. A simillia r
device could also be made from a length of pipe with one end blanked off.
(the heavier the blank, the better)

Press Release: June 1, 1995
1995 ARRL Digital Communications Conference
September 8-10th, 1995
Arlington, Texas (minutes from DFW airport)

Permission is granted to reprint any or all parts of this press release.

Full text is available on the Internet:
FTP: ftp.tapr.org WWW: hhtp://www.tapr.org/tapr E-Mail: tapr@tapr.org
---

It's that time again! Time to make your travel plans and put the finishing touches on your work for the upcoming 14th Annual ARRL Digital Communications Conference.

The ARRL Digital Communications Conference is an international forum for radio amateurs in digital communications, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The Digital Communications Conference is not just for the digital elite, but for digitally-orientated amateurs of all levels of experience.

The 1995 Digital Communications Conference will be held on September 8-10th, 1995 in Arlington, Texas. Arlington is just minutes away from the Dallas/Ft. Worth International Airport, which is located in the middle of the country, and airfares have never been cheaper for this conveniently-located conference.

Not only is the Digital Communications Conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any of the ham digital communications modes. This includes BBS operators, networkers, DX-Cluster Sysops, software writers, modem designers, and digital satellite communications enthusiasts. The Digital Communications Conference is for all levels of digital operators -- a must conference to attend to get active on a national level. Now, more than ever, amateur radio needs this great meeting of the minds, since it is important that we demonstrate a continued need for the rich frequency allocations we now have by pushing forward and documenting our achievements. The ARRL Digital Communications Conference is one of the few ways to record our accomplishments and challenge each other to do more.

What can you expect during the 14th annual Digital Communications Conference ?

* A full day of papers and breakouts on Saturday for the beginner to the advanced amateur digital enthusiast.

* Two workshops, one on APRS on Friday and one on making use of the new PCS (Personal Communications Service) technology on Sunday.

* A Texas-sized banquet with a Special Guest Speaker.

* SIGs (Special Interest Groups) on Saturday following the banquet.

* Informal get-togethers throughout the weekend.

* A meeting facility that is perfect for this type of meeting.

* Vendor area and informal engineering discussions.

* Scores of nearby restaurants and entertainment (Six Flags Over Texas, The Ballpark at Arlington, Wet 'n Wild, golf).

* An event at which the most important new developments in amateur digital communications are announced.

* Digital 'movers and shakers' from all over the world in attendance.

* Plenty of Texas hospitality!

In addition to the presentation of papers on Saturday, two workshops will be held during the conference. On Friday, Keith Sproul, WU2Z, will hold a workshop on APRS packet-location software. Keith is the Chair of the TAPR APRS Special Interest Group, developer of the Macintosh version of APRS, and a leader in the area of APRS technology. This is a unique opportunity to gain insight into this fast growing new digital aspect of amateur operations that combines computers, packet radio, and GPS (Global Positioning Satellites). On Sunday, Dewayne Hendricks, WD8DZP, will conduct a workshop focusing on a survey of Personal Communications Systems and their applications and use in the Amateur Radio Service. Dewayne is an expert in the area of commercial wireless systems; his company WarpSpeed Imagineering, focuses on wireless Internet. This workshop presents an opportunity to learn how Personal Communications Technology (handheld and small business wireless systems) can be used in the amateur service.

The 1995 Digital Communications Conference is co-hosted by Tucson Amateur Packet Radio (TAPR) and the Texas Packet Radio Society (TPRS). TAPR has been active as an international amateur research and development organization since 1981 and was responsible for development of the TNC-2 and other amateur kits and publications. TAPR currently has more than 2500 members, worldwide. TAPR continues to provide leadership in digital amateur radio activities by supporting Special Interest Groups, conferences/meetings, publications, and research and development projects. TPRS has been active as an organization since 1984 and has been responsible for the development of the TexNet network in Texas, Oklahoma, Arkansas, and Missouri. TPRS membership now tops 500 members.

Anyone interested in digital communications is invited to submit a paper for publication in the Conference Proceedings. Presentation at the

Conference is not required for publication. If you know of someone who is doing great things with digital communications, be sure to personally tell them about this! Papers are due by July 21, 1995, and should be submitted to Maty Weinberg, ARRL, 225 Main Street, Newington, CT 06111 or via the Internet to mweinberg@arrl.org. Please contact Maty for detailed format requirements.

If you have attended a Digital Communications Conference in the past, just remember back to how much fun it was discussing the latest developments into the wee hours! If you have never been, then make your plans now to attend and find out how much fun the Digital Communications Conference can be.

There are few activities where the importance of your participation can be so much fun and important! What a great way to share and renew your enthusiasm for digital amateur radio! Getting together with colleagues from all over the world and bringing each other up to date on your latest work. All this, and more, for an unforgettable weekend of ham radio and digital communications. Make your travel and lodging arrangements now. We hope to see you at the ARRL Digital Communications Conference on September 8-10!

Full information on the conference and hotel information can be obtained by contacting Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Road, Tucson, AZ 85749-9399. Phone: (817) 383-0000. Fax: (817) 566-2544. Internet: TAPR@TAPR.ORG

Sincerely,
Greg Jones, WD5IVD Q President, Tucson Amateur Packet Radio
Dave Wolf, WO5H Q President, Texas Packet Radio Society

Note: If you need handouts or flyers for meetings, contact TAPR about getting what you need!

Hotel Information

Conference presentations, meetings, and workshops, will be held at the La Quinta Inn and Conference Center, 825 N Watson Road, Arlington, Tx, (800) 531-5900, (817) 640-4142, Fax (817) 649-7864, intersection of I-30 and Texas 360. Rooms rates are $53/single, $58/double, $63/triple, and $85+ for suites. When making reservations with the hotel, be sure to indicate you are attending the conference. Six Flags (larger than Disney Land), the Texas Rangers, and several other attractions are within a few miles of the hotel. If you are planning to stay at the hotel, it is highly recommended that you book your room prior to August 25th, 1995 -- a block of 100 rooms is reserved for Friday and Saturday. The hotel provides transportation to and from D/FW International Airport. You should contact the hotel to arrange airport transportation.

Registration

Contact the TAPR office by Phone, Fax, or e-mail (Internet: tapr@tapr.org) to pre-register or for additional meeting information. MasterCard and VISA

accepted.

Digital Communications Conference
==========
- Pre-Registration (before August 21st) $30.00 *

- Late Registration or at door $35.00 *

* - Conference Registration includes:
Conference Proceedings, Sessions, Meetings, and Lunch.

- Saturday Evening Dinner $17.00 **

** - Dinner, Speaker, Prize Drawing (Limited Space)

Workshops
==========
APRS Workshop, Friday, 4pm - 7pm. Conducted by Keith Sproul, WU2Z

- Pre-Registration (before August 21st) $10.00

- Late Registration or at door $15.00

PCS Workshop, Sunday, 9:00am - 1:00pm. Dewayne Hendricks, WA8DZP
Survey of Personal Communications Systems (PCS) Technologies and their
application and use in the Amateur Radio Service

- Pre-Registration (before August 21st) $10.00

- Late Registration or at door $15.00

Contact TAPR to register for the DCC.
Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Road, Tucson, AZ

119. ICOM R70: Need Service Manual & parts

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: geoffs@onr.com
Message-ID: <3t95a4$bdd@Sierra.onr.com>
Source record: 243091

I've posted this to several Usenet rec.radio.* groups, thanks for your patience if you've run into it previously.

I recently acquired a super clean R70 at a very attactive price. It's got a few shortcoming that I'd like to remedy.

First, I need the service manual with all of the alignment instructions, specs and schematics. I can probably buy one from ICOM but those things sometimes get left behind when an owner sells the hardware. I have the operators manual already.

Secondly, anyone got an FL-44 or FL-63 (I'd like both) for sale? Anyone know of a Fox-Tango equivalent?

Finally, there's a Murata 455kHz AM filter that's leagues ahead of the cheapie that's standard in the R70. It's called a CFU 455 I or CFU 455J. Murata stuff's hard to get these days. Anyone got a source or a spare one?

Thanks again.

Geoff Schecht NQ7A Austin, TX

Tom, I don't think that anybody is proposing outlawing code. Just that it
doesn't need the preemenent place it currently holds.

Don't waste your time. Even the U.S. Supreme Court has upheld dead restrictions.
For example deed restrictions to keep minorities out of neighborhoods were found
to be legal and constitutional. However the court in the same opinion noticed that
other constututional issues were open to suit and thus the deed restrictions to
not allow minorities were brought to court and won by the minority groups. Soon
those restrictions were removed from the deeds.

For Amateur radio, even the ARRL won't take your side. Your only choice is to
move to an area that does not have antenna restrictions as well as open housing. Of course
you could try to change the restriction, going door to door. One of my
neighbors did that in our area, had a lawyer draw up the amendment and get 100%
approval. With some of your neighbors interested in satellite dishes you might just
be able to get an amendment.

123. DF (foxhunt) software pse?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: csl@ambrosia.demon.co.ul
Message-ID: <804796140.28104@imp.demon.co.uk>
Source record: 243095

Hi. Thinking about a DF hunt the Chester and District ARS are
organising on 2m it occured to me that it would be fun to try and
program a small computer to accept two national grid references and
two compass bearings and output another national grid reference!
I reckon that ordinary triangles would be accurate enough (rather than
circular ones- geographical area is small) has anyone done it and
(ahem) do they have a BASIC/OPL/whatever listing I could have.

Failing that I'll have a go myself, but gawd knows where I'll end up.
(I got 26% in my last ever geography exam :-))

(Incidently, anyone in Chester area who might be interested -it will
be very informal- details from G8OJQ)

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>There's a pattern here. MW is 300 kHz to 3 MHz, and LW is 30 kHz
>to 300 kHz. VLF is the area below 30 kHz. UHF stretches from 300 MHz to
>3 GHz. Each step is a decade, and each breaks with a most significant
>digit of 3. You had VHF and HF right, but missed on the others.

And that pattern makes even more sense when you look at it in terms
of wavelength:

VLF = wavelengths longer than 10^4 meters
LF = 10^4 meters to 10^3 meters
MF = 10^3 meters to 100 meters
HF = 100 meters to 10 meters
VHF = 10 meters to 1 meter
UHF = 1 meter to .1 meters
SHF = .1 meters to .01 meters
EHF = wavelengths shorter than .01 meters

Wavelengths in powers of 10 were the original defining measure for
partitioning the RF spectrum.

Mike,

I don't believe there is a shareware version, but you may be
talking about a testdrive version with limited features.

You may want to check with the Interflex landline bbs at
714-497-5860, Laguna Beach, CA. You can always get the latest
information on Interflex products such as the PKGOLD or KAGOLD
software, upgrades and pricing. They also have many other ham
radio related files and a User Forum.

>rod out of the ground! Can anyone offer suggestions?

The best suggestion I've heard is a car jack. To get a good grip on
the rod (so you have something for the jack to push against), put
a big ViceGrip real tight on the rod. Depending on the soil, you'll
probably need a heavy board under the jack.

128. Re: CW vs. mediocrity

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: myers@West.Sun.COM
Message-ID: <3t9ksd$fja@abyss.West.Sun.COM>
Source record: 243100

In article <3t0lcm$slr@popcorn.hamburg.pop.de>,
Peter Lemken <plemken@mail.hb.provi.de> wrote:
>GC>Mediocrity is the sworn enemy of excellence. As long as we cling
> ^^^
>GC>blindly to nediocre methods, we hamper the implementation of better
>GC>ways.

I really fought the urge to respond to this note, but it finally
overcame me. Sorry.

>Oh, yes, you bet it is! I call a person not being able (or willing) to
>copy 13wpm code a possessor of a most mediocre mind, unless this very
>person suffers from a severe illness that makes copying impossible.

Well, this is an interesting statment. This statement seems to
make the comment that anyone who can't (or won't) learn a particular
thing posesses a mediocre mind. Using this logic, we can make a number
of assertions...

"I call a person not being able (or willing) to <fill in blank> a
possessor of a most mediocre mind"...

Filling in the blanks...

"design a power amplifer matching circuit"
"write embedded 8051 code"
"do complex arithmentic"
"play the piano"
"develop DSP code for a TMS320"
"build HF beam antennas"
"design PLL frequency synthesizers"
"build UHF preamplifiers"
"speak Russian"
"discuss issues objectively"

and so on....

In other words, this assertion, in virtually any form, is simply the
communication of the speaker's bias. A lack of interest in some
particular skill doesn't automatically make one guilty of mediocrity.

>Excellence is the ability to surpass obstacles in a superior way. Is it an
>obstacle to hook up the TNC to a computer, start the software and stare
>onto the screen? I don't think so.

This last sentence seriously downplays the challenges of operating
digital modes on HF, but, again, it seems to exhibit a bias on the

part of the writer. Evaluating who is mediocre based on your
interests simply isn't reasonable; it is a lot like bigotry,
saying that anyone that doesn't share your interest possesses
a mediocre mind.

>Anyone complaining about the code test for HF-access today can get a
>ham-ticket without code. You can use all your digital stuff, even make
>intercontinental contacts by means of satellites or VHF-DX. So, what is it
>that makes all these digital whimps want to conquer the HF-bands without
>wanting to spend a fair amount of learning CW? It is the whining of a
>mediocre community wanting to achieve the status "excellence" without
>working for it. The biological term for this is "parasitical behaviour", I
>think.
>
>Stay mediocre, stay among yourselves and leave us alone!

The use of the terms "digital whimps", "whining" and "mediocre community"
clearly shows your prejudice and makes me question your ability to
discuss issues obejctively. In other words, using your own logic,
you possess a mediocre mind because you can't or won't do something
I believe to be important. I don't believe you possess a mediocre
mind; but I hope that the discussion of the Morse requirements can
get away from the bigotry, insults and hurtful rhetoric. If you,
or anyone reading, values superiority, then I invite you to leave
your feelings and prejudices behind and objectively discuss these
issues.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I've decided on Kenwood's TH79 AD HT and would like to hear any opinions
on this model.

I also have a few questions.

Is the few extra bucks for a 2.5 to 5 watt upgrade worth it? I know range can
be affected by many other variables but on the average how much more range will
it give me?

Does the 5 watt battery last as long as the 2.5 before a recharge? How long
do they last on average?

What kind of mods can be made to this unit and where?

I know there is a 12 volt adapter for mobile use but is there an AC adapter
so I can use it in my apartment? Or can I use it as it is being charged like
some scanners for example AC cord with transformer that plugs right into
the unit as opposed to a charging stand.

What is the best price I should be looking for and where (from a reputable
mail order company)?

A friend is also considering the TH 28A and TH22 AT single banls anyone
know the major differances between these two models?

Any help is greatly appreciated.

Thanks
Bob

132. US Island Award FAQs

From: johnn0isl@aol.com
Message-ID: <3t9qva$pik@newsbf02.news.aol.com>
Source record: 243104

MSG#411 06/27/95 22:08:46 FROM NL7TB TO ISLDX @USA
SUBJECT: What is the US Isl. Program?
PATH: N0ISL!KZ7I!N0DAI!N0QVC!NX0C!KO0X!WA0RJT!W0IUQ!N0ONV ...

...ATTENTION STATE ISLAND DWELLERS, ACTIVATORS OR ISL. COLLECTORS
WORLD-WIDE... The United States Islands Awards Program
(US I) is for you!

INTRODUCTION

The United States Islands Awards Program, US I, covers inland
fresh water river and lake islands and selected saltwater islands
of the 50 states of the United States. US I was formed to further
enhance "island chasing" that has become so popular on the HF
amateur bands. The US I goal is to promote a simple but effective
"system of US island collecting" in a professional radio-manner and
to operate totally on the "honor system". US I warmly welcomes all
island enthusiasts to another facet of island collecting. US I is
open to anyone (Ham or SWL) interested in STATE ISLAND COLLECTING
or ACTIVATING.

BOARD OF DIRECTORS

The governoring body of US I is the Board of Directors (BOD) and
is composed of the Program Director (PD) and State Coordinators (SC).
Each SC will manage the islands within 4 US call areas.

GENERAL INFO

All state islands meeting US I criteria will be numbered according to
"state and type". Example: WA-01L, TX-04R or FL-22S where WA, TX and FL
indicate the state and the number is a consecutive activation number
issued and the letters "L", "R" or "S" designate type of island (lake,
river or sea). The unofficial US I operating frequencies are 7250, 21350,
14250 (main) and 28450 kHz phone plus your favorite CW or digital
frequencies. Several different award certificates and plaques are avail-
able from the BASIC AWARD to our ADVANCED AWARD. If you activate a mini-
mum of 10 state islands there's even a free certificate for you! US I
packet bulletins, "ISLDX", will be transmitted often (atleast monthly) to
announce news of future and completed state island DXpeditions and other
items of island interest.

If you live on a state island (fresh or saltwater) or can activate one,
we would certainly like to hear from you. Island collecting on the HF
bands
is very popular- the pileups are incredible! The "US Island Directory",

our
detailed information package including island criteria, a listing of
current
islands activated and awards offered is available for $5.00 US/Canada or
$7.00 elsewhere. Thanks, 73 and enjoy ISLAND COLLECTING!

From: scotte@ccs.neu.edu
Message-ID: <3t9rd6$hm9@camelot.ccs.neu.edu>
Source record: 243105

In a few weeks, I'll be on an international ham radio talk show talking about the my opinion of the impact of the Internet on ham radio.

I'd like to take a survey, and would greatly appreciate your input.

Any and all responses will be kept in strict confidentiality, and any quotes will remain strictly anonymous. I am interested in the statistics as a whole, and not necessarily one person's answers.

- How much time do you spend online? Has it affected the amount of time you spend with Amateur Radio?

- Is your provider with a 'pre-packaged' service such as America Online, Compuserve, Prodigy, etc, or with a full Internet Service Provider?

- In either case, with whatever flexibility either service provides, how much time do spend

- With e-mail

- If you use other areas (Usenet, Gopher, World Wide Web, etc), how much time do you spend using those services?

- Do you use packet radio (AX.25, TCP/IP, etc)?

- How often?

- How has your online time affected your ham radio activity?

What are your viewpoints on some recent products available on the Internet such as Internet Phone, C-U-See-Me? How about Internet Relay Chat? Chat/Talk/Phone (two-party communication)?

How do you see these products affecting Amateur Radio, if at all?

Any other information you can provide would be greatly appreciated.

All answers must be received by Saturday, 29 July, 1995.

Thank you very much for your time and cooperation.

73,

1-2-3 hours per day. Call it an average of 2.

> Has it affected the amount of time
> you spend with Amateur Radio?

Yep, it eats into ham radio time. I'm mostly VHF and UHF mobile (FM)

> - Is your provider with a 'pre-packaged' service such as America Online,
> Compuserve, Prodigy, etc, or with a full Internet Service Provider?

Getting off AOL. Keeping Compuserve. Delphi too expesive. Digex is great
and keeping it for a long time. Netcom cant do anything off line.

> - In either case, with whatever flexibility either service provides, how
> much time do spend
>
> - With e-mail

40% e-mail, 60% newsgroups.

> - If you use other areas (Usenet, Gopher, World Wide Web, etc),
> how much time do you spend using those services?

not much.

> - Do you use packet radio (AX.25, TCP/IP, etc)?

some

> - How often?

some, then abandoned it, but think I'll be getting back on (with Baycom unit)

> - How has your online time affected your ham radio activity?

yes.
>
> What are your viewpoints on some recent products available on the
> Internet such as Internet Phone, C-U-See-Me? How about Internet Relay
> Chat? Chat/Talk/Phone (two-party communication)?

haven't tried it yet.

> How do you see these products affecting Amateur Radio, if at all?

regular internet tends to make ham radio obsolete. I can telnet to the
other side of the world, Q-5, no QRM, no QSB, no QRN, no TVI. And, its
cheaper than ham radio.

Date: 1995-07-03 00:00:00 UTC
From: Frank Donovan <donovanf@jekyll.sgate.com>
Message-ID: <Pine.OSF.3.91.950703170827.4434B-100000@jekyll.sgate.com>
Source record: 243112

George,
Like so many questions involving antennas, there is no neat simple answer! Normally one would expect a mono band Yagi (particularly one of 5 elements or more) to outperform any Log Periodic design. However, that Yagi will also cover only one band, while the LP will perhaps cover 5, 6 or 7 ham bands!

Your KLM KT34XA is one of the most effective tribanders ever made. If your interest is mainly 20, 15 and 10 meters, you will probably be a bit disappointed with an LP. If however you would also like access to the 18 MHz band (a very fine DX band!), perhaps an LP will be a good choice for you. The five band Yagis, however, generally do not perform well...

The military uses LPs because of their broad frequency coverage. They often run higher power than amateur stations (but not always!), so absolute gain is not a serious issue. Also, more often than not, military nets involve fairly strong signals and not as much QRM as we often have in the ham bands. Prior to the availability of LPs, many military HF sites used dozens (or more!) of large Rhombic antennas on very tall towers occupying hundreds of acres or more! Needless to say, the LPs save an enormous amount of maintenance and space for a military comm station.

141. power supply for battery

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: c002@Lehigh.EDU
Message-ID: <3ta4as$10jp@ns4-1.CC.Lehigh.EDU>
Source record: 243113

Morning....
i was wondering the effects of chargeing a ICOM HT battery with a
high amp power supply <7a@12v> instead of the small charger that came
with the radio.

this way i can keep the plug in the radio so i can transmit w/out switching
cables

thanks

DAvid

> This will happen 2 & 3 September 95.
>For more information, drop me a note at jchevere@kendaco.telebyte.com.

One correction needs to be made regarding the above: the operating date will be September 1 and 2, NOT September 2 and 3. There is a possibility that we will extend operations beyond the 2nd, but for now the official date is the 1st and 2nd.

E-Mail may also be directed to project chairman Tom Sanders, W6QJI, at WW2END@aol.com

Also, look for a WWW page coming soon...

This is going to be a once in a lifetime event, I hope that amateurs worldwide will have the opportunity to participate and call WW2END.

Message-ID: <0019EE99.fc@mlstand.com>
Source record: 243115

Hope this helps.....First turn the backup switch "on". Now, push and hold the "MCK" button (#2 on the keyboard) and turn on the transceiver power switch while holding in the "MCK" button. Once the display stabilizes, your set will be properly initilalized , and it will work over the full amateur band. Note: the display will read "7.000.00" MHZ, the preset frequency.

Good Luck, 73's de Scott KB2GWF

> rod out of the ground! Can anyone offer suggestions?

I think I'd probably put a pipe wrench on it and rotate it a few
turns to loosen it a bit, then figure out a way to attach the top to
a hydraulic jack to pull it out. As for the $10 ... you may well
find that the time you spend saving the $10 translates to less than
minimum wage, though. <g>

> I'll be installing the rod into a new location. I got the first rod
> into the ground with brute force; can anyone give some ideas on what
> might be easier ways to get a ground rod into the earth?

A 10' log drill bit? <g,d> I wonder if anyone had come up with a
THREADED ground rod that you could put into the ground with a wrench
... and perhaps even remove that way?

On this issue: New information, and SPIA award rules.

---------------------------<< New information >>-----------------------

SA-054 13-16 July
-----------------
The Caracas DX Group, will be active from La Orchila Island with callsign
YW5LO. QSL manager TBA.

EU-006 27-July 1-Aug
--------------------
The WestNet DX Group write us that they will be active in the IOTA Contest
1995, from Inis Meain Island.
Outside the IOTA contest, the group will be concentrate their activity
on 160m and the WARC bands.
They hopes also to be operational on RTTY, AMTOR, PACTOR.
Operators of WestNet DX Group include:
EI6FR, EI2GX, EI3HA, EI9IF, EI7DSB, GW4VEQ, GW0ONY, GW4OFQ, GW3JXN, GI0KOW
GI0NWG.
The WestNet DX Group hopes to obtain a special callsign in time for the
contest (announced later). Otherwise the EJ3HA callsign will be used.
Tnx to Declan, EI6FR.

NA-092 29-30 July
-----------------
Dave WQ5Y, Mike KG5CM and Frosty K5LBU, will be active from Mustang Island,
as Multi-Single station during the IOTA Contest. Possible other operators
are: Bob K1TU (CW) and Rick KF5NU.

EU-034 29-June 4-July
---------------------
Group of Estonian Amateurs of Viljandi Radio Club and ES6DO will be active
from Saaremaa Island. Callsign will be ES6Z/0. They will operate on HF
bands (3.5 to 24 MHz) in CW and SSB around the IOTA frequencies.
QSL via ES6DO.

OC-003 24-October
-----------------
```

N4CBR and TI2JJP, will be active from Cocos Island for approximately 15 days.
They plan to operate on HF bands including 80m and 160m.

NA-129 10-13 July

VE3VRO will be active from Banks Island.

NA-193 14-17 July

VE3VRO will operate also from Hershel Island, only between 0000z-0300z.

EU-077 29-30 July

ED1MC of Batea IOTA Team will be active from Salvora Island, during the
IOTA Contest. They will be active on CW and SSB.
QSL Via EA1MC (buro or direct). Please send a SASE for direct QSL.

----------<< Island Award rules >>----------
In this issue we have included the SPIA award rules. If you have any question
about this award, please contact us, we ask to Massimo IK1GPG (Italian
SPIA check point).

POLISH ISLAND AWARD - (SPIA)
----

1. This award issued by SP-IOTA-C is avaiable for all amateurs and SWL.
2. Contacs are valid on any band, mode or date. Contacts via repeaters
do not count.
3. Confirmed QSOs are required with amateur stations located on Polish islands.
for EU stations - 10 islands, for DX stations - 5 islands
Endorsements are given for each additional 5 new islands.
4. The fee for Award is 5 US$ or 10 IRCs. Stickers - SAE (SAL) and 1 US$
or 2 IRCs.
5. Send your applications with QSL, fee and list of QSO ordered by islands
reference numbers to AWARD MANAGER:
SP9VFQ, Adam Domagala,P.O.Box 53, PL-32020 WIELICZKA, POLAND
6. Award Manager's decisions are final!

The following is a QST

Ham radio helps make history in space as the Space Shuttle meets the Russian Mir Space station. Also, the date is announced for the national repeater coordination meeting, deed restrictions in ham radio antenna structures in the spotlight, and the cost of vanity is going down. Find out more on Newsline report number 933 coming your way right now!

(*****
SAREX ON MIR RENDEZVOUS

SAREX, the Shuttle Amateur Radio Experiment ham radio station is making history this week as it helps guide the space shuttle Atlantis to the Russian Mir Space Station. This is because the same radio used for SAREX contacts will help unite Atlantis and Mir for this first ever event.
The mission, designated STS-71, carries Astronauts Ellen Baker, KB5SIX and Charlie Precourt, KB5YSQ. Baker and Precourt will operate 2 meter FM voice only, using the same radio which will also facilitate a rendezvous and docking with the Russian Space Station Mir. The docking between Atlantis and Mir will carry two new crew members to the station, and return three Mir crew members Vladimir Dezhurov, Gennadiy Strekalov, and US astronaut Norm Thagard back to earth. This mission is the first of at least seven shuttle flights to Mir and is a precursor to building the International Space Station.
Most of the normal SAREX activity is planned for after the Shuttle separates from Mir. The crew has scheduled voice contacts with four schools in the US and one in Russia. Baker and Precourt also plan to make random contacts with the Amateur Radio community as their busy schedules permit.
Because of the Mir rendezvous, a different set of frequencies will be used for this SAREX mission. The astronauts will operate split, transmitting and receiving on separate frequencies. The voice downlink is 145.84 MHz. The voice uplinks are 144.45 and 144.47 MHz. The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the luck of the draw.
Landing is planned for the Kennedy Space Center in Florida, with SAREX having helped to write another chapter in mans conquest of space.

(*****
NATIONAL REPEATER COORDINATION CONFERENCE

The long awaited National Repeater Coordination Conference hosted by the American Radio Relay League is now set for Saturday, October the 7th in St. Charles Missouri. St. Charles is a suburb of St. Louis and is a hub for Trans World Airlines as well as a major destination city for numerous other air carriers.
By the way, there has been more than a bit of confusion about the role of the A-Double-R-L in this conference. As explained to

Newsline, the League is only providing the meeting place, a few speakers and a few ideas. It will be up to the coordinators and spectrum planners attending the conference to bring in the topics and make the decisions.
ARRL officials Newsline has spoken with have made it clear that League has no interest what so ever in becoming a national frequency coordinator or anything even remotely similar. The League, they say, is willing to become a single point of contact between frequency coordinators and the FCC, but at this time, that's all. Any changes to coordination policy or the FCC rules governing repeaters will have to come from a consensus of the nations frequency coordinators themselves. It will not originate within the American Radio Relay League.
Again, the new date and place for the National Repeater Coordinators Conference is Saturday, October the 7th, in St. Charles Missouri. The exact location will be announced shortly. It is billed as an open meeting. This means anyone involved in FM and repeater coordination efforts is welcome.
And, no matter how small the level of involvement by the ARRL is, we predict that the decisions made the coordinators at this gathering will eventually impact on the day to day operation of every ham. Even those who simply operate FM with an HT!

(*****
LOWER COST VANITY

The cost of getting a vanity call sign is going down even before the first gate to obtain one opens. As part of a recent FCC action in Docket 95 dash 3, the fee for an Amateur Radio vanity call sign has been reduced to thirty dollars for the ten year license term. That is three dollars per calender year, but there is a catch. The catch is that it requires an elusive FCC Form 610 V to apply for a vanity call, and nobody can figure out how long it is going to be until the Office of Management and Budget gets around to approving the FCC's request.
The new thirty dollar fee structure will not be official until ninety days after its publication in the Federal Register. That places the effective date into September or early October. Probably, about the elusive form 610 V makes it debut.

(*****
CCR

Some bad news for hams planning to buy new homes that have land use restrictions. If you sign a purchase agreement and are later told you cannot put up a tower and antenna system, you only have yourself to blame for not thoroughly reading that agreement and the property deed.
According to several prominent ham radio lawyers, deed restrictions, sometimes called Conditions, Covenants and Restrictions are contractual agreements between the buyer and the

seller of a piece of property. Unless they are blatantly unconstitutional on their surface such as restricting the transfer of property based on race, creed or color that no court in the country will consider overturning one.
Jim O'Connell, W9WU, of Chicago is an attorney who is considered to be an expert in the area of ham radio antenna structure law. He says that there is only one way to safeguard yourself when buying that new home:

"You have to protect yourself by having a addendum to the contract or to the offer to purchase that essentially says that this contract is further subject to buyer and buyers attorney inspecting the homeowners association rules or the covenants, conditions and restrictions of record." Jim O'Connell, W9WU.

Jim O'Connell says that all of the information you need to do this is available from the American Radio Relay League:

"The regulatory branch at the AMerican Radio Relay League headquarters in Newington can provide you with a copy of that. They can provide you with the names of volunteer counsel, ARRL Volunteer Counsel who are attorneys who are ham radio operators that will be more than willing to give you free, no cost telephone consultation." O'Connell

To date, no court decision has held that a citizen has a constitutional right to operate an amateur radio station. So if you are a ham who is planning to buy a house, be certain to ask your realtor about any deed restrictions on antennas, towers and transmitters. Then run any land contract or deed past a lawyer before you sign on the dotted line.

(*****
CALIFORNIA LICENSE SCAM PROBE CONTINUES

The FCC may be readying punitive action against a large number of hams and former hams in Southern California. This, in connection with last years probe of wide spread amateur radio licensing corruption throughout the area.
According to usually reliable sources, the licensing fraud investigation did not end when two hams were stripped of their licenses and another had his suspended. That action simply took the probe out of the limelight, permitting it to continue outside the glare of public scrutiny.
You may remember that almost three dozen Volunteer Examiners were suspended state wide and close to a hundred applicants were ordered to be retested. Almost none of those told to take new exams by an different VEC bothered to do so. Most of those who did, failed. Many simply turned their licenses into the FCC for downgrading or outright cancellation.
There is strong speculation that it was this group of applicants that has turned states evidence against the allegedly

corrupt VE teams. It is definitely known that the FCC has been able to amasses a mountain of evidence in the case. Now, after a year and a half of investigating, word on the street is, that the ax is about to fall on those who are believed to have corrupted the all volunteer testing system, out west.

(*****
DIGITAL CONFERENCE

The 1995 Digital Communication Conference will be held on September 8th to the 10th in Arlington, Texas and co-hosted by Tucson Amateur Packet Radio and the Texas Packet Radio Society.
The Conference is an international forum for radio amateurs in digital communication, networking and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The Digital Communication Conference is not just for the digital elite, but for digitally orientated amateurs of all levels of experience.
Anyone interested in digital communication is invited to submit a paper for publication in the Conference Proceedings. Presentation at the Conference is not required for publication. Papers are due by July 21, 1995, and should be submitted to Maty Weinberg, ARRL HQ, 225 Main Street, Newington CT 06111.

(*****
ARRL WORKSHOPS

And two ARRL sponsored workshops are on tap for Friday, July 28th, at the New England Division Convention in Manchester, New Hampshire. The first titled "Amateur Satellites - Today and Tomorrow," will be taught by QST New Ham Companion editor Steve Ford, WB8IMY, and by AMSAT experts. AMSAT is cosponsor of the workshop.
And an ARRL educational workshop will be held the same day from 12 noon to 5 PM. To preregister for either session contact Rosalie White, WA1STO at the ARRL.

(*****
CQ INTRODUCES ONLINE ORDERING

CQ Communications has announced the introduction of online ordering for its magazines, books, videos and other products. The online ordering system is available to anyone with access to Internet e-mail, and is designed to combine added convenience with a high level of security. Accessible 24 hours a day, users of the online system place their orders via e-mail directly to CQ headquarters in New York. There, staff members receive and process them. CQ says that the system's security lies in the

sign-up process. sign-up applications may be requested via e-mail only.

(*****
UK RULES CHANGE

On the international front the June edition of the Radio Society of Great Britain's magazine Radio Communications carries the full text of a proposal for changes in the use of Great Britain's VHF and UHF Amateur Bands. The proposal, which comes from the pan-European CEPT licensing authority is a discussion document on the matters dealing with CEPT licensing as it relates to operation by UK hams.

FIVE COUNTRIES SEND REPS TO COURSE AT HQ

Here at home, the United States Telecommunications Training Institute's course on Amateur Radio administration brought representatives from five countries to ARRL Headquarters. The course was taught by International Amateur Radio Union President Dick Baldwin, W1RU, and ARRL International Affairs Vice President Larry Price, W4RA, with assistance from ARRL staff members.

(*****
SEANET '95

From the Pacific Rim, the 1995 SEANET Convention will be November 17th to the 19th on Smui Island Thailand. Smui Island located is located in Thai Gulf.

(*****
SOFTWARE SUIT

And several packet reports from Japan say that two United States software firms have sued a Japanese firm for alleged copyright infringement. The suit seeks 2.3 million Yen in damages.

(*****
FM SIGNAL ON RS-10

WA4YMZ is asking if anyone knows what the FM signals are on RS-10? Gary says that for about a month, he has been hearing Spanish language FM transmissions when the satellite is over Central America. The signals are pretty strong, and Gary is wondering if we have another example of ham equipment being used by commercial interests because it's cheaper. If you have an answer send an e-mail message to WA4YMZ@amsat.org.

(*****
PLANNED LAUNCH OF JAS-2

Kazu Sakamoto, JJ1WTK has announced that there will be a new Fuji class OSCAR to be launched early next year. The planned launch date has been tentatively set for Feb '96 and will have the same frequencies as FO-20 currently uses.
However, there will be a 9600 baud capability FSK uplink available on 145.870 MHz but it will not use the current PACSAT protocol that is currently used on AO-16 and the UoSats. The BBS will work just like it currently does on Fuji Oscar 20.

(*****
DX

In DX, 5H3MS reports that a new Amateur Radio Club has formed in Tanzania. On May 6th, The Tanzania Amateur Radio Club held its inaugural meeting at which time the group decided on a regularly scheduled net every Sunday morning at 0500z on 7080 kHz. TARC is also in the process of registering as a club in Tanzania and once this is done they will become a member of the I-A-R-U.

Also, an operation from St. Paul Island is set for July 27th through August 2nd. Look for WA4DAN, AA4VK, KW2P, K4TVE and W5IJU signing their home call slash CY9. Major sponsors of this operation include Cushcraft Corporation, Dunestar System and The Radio Works Company. QSLs should be sent via WA4DAN, Murry Adams, 403 East 14th Street, Greenville, NC 27858.

(*****
W9DXCC

The W9DXCC Convention will be held September 8th, 9th and 10th at the Holiday Inn Holidome in Rolling Meadows, Illinois. Activities will be begin on Friday evening at 8 PM with the DX Hospitality Suite hosted by the Northern Illinois DX Association. The DXer's Banquet features NI6T with a presentation on the Conway Reef 1995 DXpedition. For more details contact Michael Zeug K9EC at his callbook address.

(*****
ALABAMA GIFT

And finally, we started this weeks newscast with a repeater story. Lets end it on the same note.
Ken Barnes, KD4PEI, tries to help others and doesn't ask for anything in return. But Ken's fellow hams who are members of an Alabama amateur radio club decided it was time to give Ken a special thank you for the work he has done on the Club's repeater.

What the Club did for Barnes caught him completely off guard. For the past few years, Ken Barnes has been a member and friend to the Montgomery Amateur Radio Club. When help has been needed on the Club's 2 meter repeater, Ken was there. When the Club needed someone to climb the tower, Ken did the climbing. Since the Club had spare equipment, Ken says he was interested in buying the repeater for his own. When the subject came up at the Club's May

first meeting, it didn't take Board members long to decide how to say thanks. They gave Barnes the repeater.

"Man, I was really shocked. I wasn't expecting anything like that. It, I thought it was April Fool's. I had to go look at the calendar. I thought it was April the 1st." Ken Barnes, KD4PEI.

Barnes says he'll keep the repeater on the air. He has already purchased a new controller. He says he doesn't think the favors he has done for his Club are worth getting a repeater. Other Club members felt there was no better way to say thanks to a friend. Ken Barnes plans to use his repeater to help provide emergency communications and for linking to other Alabama cities. If you're traveling through central Alabama, Barnes' machine operates on 145.31 MHz from just northeast of Montgomery, Alabama.

149. Re: How to _remove_ a ground rod?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: coxre@enterprise.america.com
Message-ID: <3taa3u$6r6@enterprise.america.com>
Source record: 243121

jmesser@paradise.net (James Messer) writes:
If you have or know someone with a tractor with a hydraulic lift, it
should be easy enough to lift the ground rod. Otherwise, a
come-along type device connected between the ground rod and an
A-frame should do the job.

Good luck.
Bob KD4LOK

>I've had a ground rod installed in a location for about a year, and
>now I'm moving. I'd like to take the ground rod with me (ten bucks is
>ten bucks, after all), but I'm not sure the easiest way to get this
>rod out of the ground! Can anyone offer suggestions?

>I'll be installing the rod into a new location. I got the first rod
>into the ground with brute force; can anyone give some ideas on what
>might be easier ways to get a ground rod into the earth?

>Thanks for any info!

Press Release: June 1, 1995
1995 ARRL Digital Communications Conference
September 8-10th, 1995
Arlington, Texas (minutes from DFW airport)

Permission is granted to reprint any or all parts of this press release.

Full text is available on the Internet:
FTP: ftp.tapr.org WWW: hhtp://www.tapr.org/tapr E-Mail: tapr@tapr.org
---

It's that time again! Time to make your travel plans and put the finishing touches on your work for the upcoming 14th Annual ARRL Digital Communications Conference.

The ARRL Digital Communications Conference is an international forum for radio amateurs in digital communications, networking, and related technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The Digital Communications Conference is not just for the digital elite, but for digitally-orientated amateurs of all levels of experience.

The 1995 Digital Communications Conference will be held on September 8-10th, 1995 in Arlington, Texas. Arlington is just minutes away from the Dallas/Ft. Worth International Airport, which is located in the middle of the country, and airfares have never been cheaper for this conveniently-located conference.

Not only is the Digital Communications Conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any of the ham digital communications modes. This includes BBS operators, networkers, DX-Cluster Sysops, software writers, modem designers, and digital satellite communications enthusiasts. The Digital Communications Conference is for all levels of digital operators -- a must conference to attend to get active on a national level. Now, more than ever, amateur radio needs this great meeting of the minds, since it is important that we demonstrate a continued need for the rich frequency allocations we now have by pushing forward and documenting our achievements. The ARRL Digital Communications Conference is one of the few ways to record our accomplishments and challenge each other to do more.

What can you expect during the 14th annual Digital Communications Conference ?

* A full day of papers and breakouts on Saturday for the beginner to the advanced amateur digital enthusiast.

* Two workshops, one on APRS on Friday and one on making use of the new PCS (Personal Communications Service) technology on Sunday.

* A Texas-sized banquet with a Special Guest Speaker.

* SIGs (Special Interest Groups) on Saturday following the banquet.

* Informal get-togethers throughout the weekend.

* A meeting facility that is perfect for this type of meeting.

* Vendor area and informal engineering discussions.

* Scores of nearby restaurants and entertainment (Six Flags Over Texas, The Ballpark at Arlington, Wet 'n Wild, golf).

* An event at which the most important new developments in amateur digital communications are announced.

* Digital 'movers and shakers' from all over the world in attendance.

* Plenty of Texas hospitality!

In addition to the presentation of papers on Saturday, two workshops will be held during the conference. On Friday, Keith Sproul, WU2Z, will hold a workshop on APRS packet-location software. Keith is the Chair of the TAPR APRS Special Interest Group, developer of the Macintosh version of APRS, and a leader in the area of APRS technology. This is a unique opportunity to gain insight into this fast growing new digital aspect of amateur operations that combines computers, packet radio, and GPS (Global Positioning Satellites). On Sunday, Dewayne Hendricks, WD8DZP, will conduct a workshop focusing on a survey of Personal Communications Systems and their applications and use in the Amateur Radio Service. Dewayne is an expert in the area of commercial wireless systems; his company WarpSpeed Imagineering, focuses on wireless Internet. This workshop presents an opportunity to learn how Personal Communications Technology (handheld and small business wireless systems) can be used in the amateur service.

The 1995 Digital Communications Conference is co-hosted by Tucson Amateur Packet Radio (TAPR) and the Texas Packet Radio Society (TPRS). TAPR has been active as an international amateur research and development organization since 1981 and was responsible for development of the TNC-2 and other amateur kits and publications. TAPR currently has more than 2500 members, worldwide. TAPR continues to provide leadership in digital amateur radio activities by supporting Special Interest Groups, conferences/meetings, publications, and research and development projects. TPRS has been active as an organization since 1984 and has been responsible for the development of the TexNet network in Texas, Oklahoma, Arkansas, and Missouri. TPRS membership now tops 500 members.

Anyone interested in digital communications is invited to submit a paper for publication in the Conference Proceedings. Presentation at the Conference is not required for publication. If you know of someone who is doing great things with digital communications, be sure to personally tell them about this! Papers are due by July 21, 1995, and should be submitted

to Maty Weinberg, ARRL, 225 Main Street, Newington, CT 06111 or via the Internet to mweinberg@arrl.org. Please contact Maty for detailed format requirements.

If you have attended a Digital Communications Conference in the past, just remember back to how much fun it was discussing the latest developments into the wee hours! If you have never been, then make your plans now to attend and find out how much fun the Digital Communications Conference can be.

There are few activities where the importance of your participation can be so much fun and important! What a great way to share and renew your enthusiasm for digital amateur radio! Getting together with colleagues from all over the world and bringing each other up to date on your latest work. All this, and more, for an unforgettable weekend of ham radio and digital communications. Make your travel and lodging arrangements now. We hope to see you at the ARRL Digital Communications Conference on September 8-10!

Full information on the conference and hotel information can be obtained by contacting Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Road, Tucson, AZ 85749-9399. Phone: (817) 383-0000. Fax: (817) 566-2544. Internet: TAPR@TAPR.ORG

Sincerely,
Greg Jones, WD5IVD Q President, Tucson Amateur Packet Radio
Dave Wolf, WO5H Q President, Texas Packet Radio Society

Note: If you need handouts or flyers for meetings, contact TAPR about getting what you need!

Hotel Information

Conference presentations, meetings, and workshops, will be held at the La Quinta Inn and Conference Center, 825 N Watson Road, Arlington, Tx, (800) 531-5900, (817) 640-4142, Fax (817) 649-7864, intersection of I-30 and Texas 360. Rooms rates are $53/single, $58/double, $63/triple, and $85+ for suites. When making reservations with the hotel, be sure to indicate you are attending the conference. Six Flags (larger than Disney Land), the Texas Rangers, and several other attractions are within a few miles of the hotel. If you are planning to stay at the hotel, it is highly recommended that you book your room prior to August 25th, 1995 -- a block of 100 rooms is reserved for Friday and Saturday. The hotel provides transportation to and from D/FW International Airport. You should contact the hotel to arrange airport transportation.

Registration

Contact the TAPR office by Phone, Fax, or e-mail (Internet: tapr@tapr.org) to pre-register or for additional meeting information. MasterCard and VISA accepted.

Digital Communications Conference
==========
- Pre-Registration (before August 21st) $30.00 *

- Late Registration or at door $35.00 *

* - Conference Registration includes:
Conference Proceedings, Sessions, Meetings, and Lunch.

- Saturday Evening Dinner $17.00 **

** - Dinner, Speaker, Prize Drawing (Limited Space)

Workshops
==========
APRS Workshop, Friday, 4pm - 7pm. Conducted by Keith Sproul, WU2Z

- Pre-Registration (before August 21st) $10.00

- Late Registration or at door $15.00

PCS Workshop, Sunday, 9:00am - 1:00pm. Dewayne Hendricks, WA8DZP
Survey of Personal Communications Systems (PCS) Technologies and their
application and use in the Amateur Radio Service

- Pre-Registration (before August 21st) $10.00

- Late Registration or at door $15.00

Contact TAPR to register for the DCC.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

re: HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and tnc/modem door soon !!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,and more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.01 software..
easy to log in and no FEE's it's FREE !

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.
INTERNET E-MAIL ADDRESS:> kb6axk@netcom.com

153. Syntor eprom question

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-03 00:00:00 UTC
From: "Charles Jack Hawley Jr." <hawley@aries.scs.uiuc.edu>
Message-ID: <3t7k1e$76i@vixen.cso.uiuc.edu>
Source record: 243171

I posted an address for a couple of guys doing a Motorola Syntor
project....a kit or built interface, and the address did not work.
Here is one that is more current:

This, of course, won't help you with the old one, but I read about an
interesting way of putting in a new one that might be easier (and make it
easier to get out later, if/when). I think I read this in 73, but it may be
somewhere else, too...
Basically, go down to the local hardware store and get decent size
copper pipe (I used 3/4") with the thickest wall you can buy. They typically
come in 10' length. Also buy a 90 degree elbow and a fitting for a garden
hose. (you can skip the elbow if you need to, but I found it works better).
Sweat solder the fitting and elbow on to one end of the pipe, and take the
other end and cut it on a 45 or greater angle. This should leave the end
looking something like a hypodermic syringe.
Take it to the site, attach the hose, and turn on the water full
blast. Let it run for a little bit then put the pipe in the ground. I didn't
need to force it at all. If it hung up, I just let the water work for a minute
or so, and then tried again. When it's all the way in, turn off the water,
disconnect the hose, and give it a day or so to let the ground dry back out
and set. Then just de-solder the connection, if you want to save that. I left
mine in, personally.
I had a friend of mine that moved his shack to the "other" side of his

house that had this type of setup. He just attached the hose, turned on the water, waited about 15 minutes for the ground to get saturated, and pulled it out. Simple.
Only hitch is that I would suggest not wearing anything that you mind getting wet, as it's hard to do this without swamping a small section of your yard (and yourself).
I tried getting an old- normal style - rod out once. We wound up using a stump puller, in the end. The rod was basically ruined after that (cause we kinda bent it pretty hard with the stump puller).

Good luck!

To which I replied that once your code speed is up past 20-25wpm and
you can copy in your head *then* it becomes worthwhile. No flame.
Just a fact.

>As the original author, I agree it was a bit strong but the response
>has been most enlightening. The strongly religious Herman and Wyatt both
>answered as if they had neither read nor understood my post.

Well, there's another lie. I both read and understood your post.

>Thinking that perhaps I had not made my points clearly enough I wrote
>private e-mail to both.

Ummm, another possible lie. As I recall your email was addressed to
Mr. Wyatt, and the first line started something like "Dear Mr. Wyatt".
The only place my name was mentioned was in the CC: line.

>My original post for those who can actually read and understand was a
>technical challenge to CW as a "can get through when other modes cannot
>mode" or CW as a lid filter. In fact the ravings by you and Mr. Wyatt do
>not address any of the issued raised.

I've never taken the stance that CW is a lid-filter nor that it's the
only mode that can get through. Thus, your argument does not apply to
my stance. For years my stance has been that CW is a mode common to
all HF amateurs, and it provides the novice builder an easy and cheap way
to get on the air without depending upon complex gear. Code tests should
be kept to encourage more new hams to build their first transmitter to
give them hands-on training for going to more complex modes and pro-
jects.

> If the non-responsive replies from
>you (twice) and Wyatt

Another lie. My initial email reply to the cc: copy I received was
well-thought out and stated my feelings.

Gee Gerald, why is it that you have to resort to so many lies to get
your opinion across? Surely it is a sign of a very weak argument
when you have to lie and slander your opponent.

>Since CW is less than 25% of the operating that is done and requires

Really? You must not own an HF receiver. It's one of the top two
modes on HF worldwide.

>less bandwidth the CW portions of the bands should be reduced appropriately.

Don't forget that CW is the only mode that can freely operate anywhere
on any band - it's not restricted to any subband. There is no real `CW
portion' on any band - the current subbands are by gentlemen's agreement.

>The space saved could be dedicated to alternate digital modes and
>development of new techniques.

Lots of VHF/UHF spectrum for that.

73 from beautiful Hawaii,
Jeff NH6IL

I have heard about problems with this method, that it doesn't make a very
effective ground. I don't remember why, maybe it's because the rod isn't in
as well as with the brute force method. Sounds like a tradeoff to me--
easier installation, less effective ground. This is just what I've
heard (or maybe read).

Good Luck!

: I'm in the market for a DMM, but my budget can't absorb a $200 - $300 Fluke.
: Something in the $70 -$80 range would be better. Anyone have any comments on
: other multimeters such as B & K, Wavetek, Tenma?

I have a Beckman (now Wavetek) DM15XL, which I'm quite happy
with. This meter was ~$65, and covers what I need--AC/DC volts (to 1kv
DC, 750v AC), resistance (to 2000M ohms), and AC/DC current (to 10A).
The current inputs are fused, and there's a beeper to warn you if the
leads are in the wrong current jacks.

Yes, indeed the Beardless magneto telegraph was in use during the civil war.
This was in the same family of telegraph instruments as the needle telegraph.
The needle telegraph was invented in Europe about 1840 and using by the
English railroads well into this century.
I suspect that the magneto telegraph was abandoned in favor of simpler and
faster telegraph instruments.

Jeffrey, use some smarts!
The more that you insult someone in a public forum, the more they are
going to insult you back in that public forum.

Your pathetic attempts to manipulate and control people are not going to
work!

Any time someone posts a piece of used equipment at a price above retail
people are GOING to respond and point it out. Part of the reason is that
we all remember when we were newcomers to amateur radio and were
green enough to not know what used equipment prices were running.

Trying to single me out for ridicule is not going to work JEFFREY, you
oaf! There are plenty of others who will do the same over on r.r.s.
when people try to rip off others.

I am not an attorney, but deed restrictions generally are very enforceable, as
I understand it. By buying the property the courts conclude that you
voluntarily have agreed to the restrictions on the property.

My advice is to locate an ARRL Volunteer Counsel and have them assess the
situation for you.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 865 2nd July 1995

WE APOLOGISE FOR THE LACK OF SOME RELAYS THIS WEEKEND BUT HOPE
TO SOLVE THAT PROBLEM SOON.

BE PREPARED FOR THE ODD ONE-LINER SCATTERED THROUGH THE CAST.
SEE HOW MANY YOU CAN SPOT.

NEW TECHNIQUE LETS SCIENTISTS MAP MOVEMENT OF EARTHQUAKES

Scientists using a new tool to interpret radar images have
been able to observe and map the precise spot on Earth where
movement took place during an earthquake.

Using radar images from the European remote sensing satellite
(ERS-1), taken before and after the May 17, 1993, 6.1
earthquake in Eureka Valley, Calif., geologist Dr. Gilles
Peltzer and radar scientist Dr. Paul Rosen of NASA's Jet
Propulsion Laboratory studied the surface movement.

"This technique allows you to see things you can't see other-
wise," said Rosen. "We were able to detect changes in the pos-
ition of the surface of the Earth, from before to after the
earthquake, that were smaller than the width of your finger.
And that was from 800 kilometers, or about 500 miles, out in
space."

In fact, Rosen and Peltzer were able to show that the Eureka
Valley earthquake created a surface rupture of about 3 centi-
meters, a little more than 1 inch.

This technique of comparing satellite images -- called radar
interferometry -- makes possible mapping of very small motions
over wide areas and allows scientists to study earthquakes on a
global scale in remote areas that have been relatively in-
accessible until now.

"Interferometry requires images taken before and after the
earthquake to measure the change caused by it. Because ERS-1
is continuously mapping large portions of the Earth with radar,
chances were good of finding images taken before an earthquake,

even in remote places like Eureka Valley," Peltzer explained.

The radar maps produced with this technique -- called interferograms -- are being used along with more traditional scientific tools to locate the underground shifts associated witH earthquake activity.

The Jet Propulsion Laboratory's radar interferometry earthquake research is sponsored by NASA's Office of Mission to Planet Earth.

FROM NASA

BARTG AMTOR/PACTOR CONTEST JULY 8-9 1995

CONTEST PERIOD:
AMTOR: FROM 0000Z SATURDAY TO 0000Z SUNDAY (24 HOURS)
PACTOR: FROM 0000A SUNDAY TO 0000Z MONDAY (24 HOURS)
NO REST PERIODS REQUIRED.

BANDS: 80, 40, 20, 15, AND 10M.

CATEGORIES:
1. SINGLE OP, AMTOR 3. SINGLE OP, COMBINED
2. SINGLE OP, PACTOR 4. MULTI-OP, COMBINED
5. SWL
SINGLE TRANSMITTER ONLY

EXCHANGE: RST + QSO NR. + TIME IN UTC.
USE FEC FOR CALLING, AND ARQ FOR CONTEST MESSAGE EXCHANGE.

MULTIPLIERS: EACH DXCC COUNTRY, INCLUDING FIRST QSO WITH W, VE, AND VK, COUNTS AS A MULTIPLIER ON EACH BAND. ALSO, EACH CALL DISTRICT IN W, VE, AND VK WILL COUNT AS AN ADDITIONAL MULTIPLIER ON EACH BAND. IN ADDITION, EACH CONTINENT (6) COUNTS ONCE, NOT ONCE PER BAND. STATIONS ENTERING IN COMBINED CATEGORIES COUNT MULTIPLIERS ONLY ONCE PER BAND, REGARDLESS OF MODE.

QSO POINTS: COUNT 1 POINT FOR EACH COMPLETED QSO. SAME STATION MAY BE WORKED ON OTHER BANDS. DUPLICATE QSOS ON SAME BAND RECEIVE ZERO POINTS AND MUST BE CLEARLY MARKED IN THE LOG.

FINAL SCORE: TOTL QSO POINTS X TOTAL MULTIPLERS X NUMBER OF CONTINENTS (MAX 6).

MORE NEXT WEEK

DIGITAL JOURNAL COMMENT ON THIS CONTEST --

BARTG HAS BROUGHT IN THEIR WELL-KNOWN AND WELL-LIKED RTTY CONTEST FORMAT AND FITTED INTO A UNIQUE AMTOR/PACTOR COMBINATION MODE. ITS A BRIGHT IDEA, AND A WAY TO SPREAD CONTESTORS AROUND IN THE DIGITAL MODES. THE CONTEST WILL ALSO

PROVIDE A CLEVER COMPARISON AS TO WHICH MODE HAS THE ADVANTAGE IN QSO RATES, AND FEC PILEUPS, AND SWIRCHING FROM FEC TO ARQ IN THE QRM, ALL IN ONE WEEKEND. PLACE YOUR BETS: WHICH MODE HAS THE EDGE?

THERE ARE THREE KINDS OF PEOPLE : THOSE WHO CAN COUNT AND THOSE WHO CANNOT.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(23 JUNE - 29 JUNE)

ISSUED ON 30 JUNE 1995

SUMMARY

Date 23 24 25 26 27 28 29

Clamp a Vise Grips tool onto the ground rod.

Then, place a car jack between the Vise Grips and the ground.

Open the jack to lift the ground rod a few inches out of the ground.

Reposition the Vise Grips lower on the rod and repeat the previous
step.

VK2 beacons off air

The 6m beacon VK2RSY on 52.420 MHz failed this morning (2nd July), taking the master keyer with it. As a result all the beacons are off the air.

It will be returned to service as soon as possible, and any inconvenience is regretted.

An unkind person may suggest that they went out in sympathy after the attention they received at the A.G.M.

from Dave VK2ZTB

VK2 WICEN news

VK2 WICEN News

WICEN welcomes as a new member the president of the NSW Division, Michael Corbin VK2YC; Michael was signed up at the presentation ceremony at Dural last week.

Now that the VK2 Divisional AGM is over, WICEN's Annual General Meeting is Sunday 30th July, at Hornsby RSL Club (the same place as last time) and of course the bar afterwards; all are welcome. There will be further details in a later broadcast, and of course in the newsletter as well.

The Hunter region are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

The next major event is the annual City to Surf Fun Run, on 13th August; David Shaw VK2TIP is the event commander, and he needs quite a number of people for this race; he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100. This is followed by the Shahzada Horse Enduro, run by Andy VK2XRX over 21st-25th August.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the

State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

SMPTE in Sydney
SMPTE 95

For those with an interest in the technology currently being used in television or the allied industries may care to check out the Society of Motion Picture and Television Engineering Conference and Exhibition being held this week at Darling Harbour, Hall 5.

The four day event, from Monday 3rd July until Thursday the 6th is open from 10am to 5pm.

News briefs
News Briefs

Qantas will be the first airline to install Global Positioning Systems in its aircraft. The airline's first test flight using the system was scheduled to take place this week, using a Boeing 747 flying from Sydney to Los Angeles. Qantas is looking at installing GPS on its 757 and 767 aircraft, and next year on the new Boeing 777.

The Global Positioning System was developed during the 1980s, as part of the US Strategic Defence Initiative, more popularly known as "Star Wars". In the last couple of years, GPS has become available and affordable for marine and portable applications; its use in civil aviation is realtively new.

Boeing is about to start testing GPS for aircraft approach and landing applications. Aircraft will be able to establish contact with air traffic control (TRACON) centres instantly and automatically -- when performed manually by pilots, establishing TRACON contacts can often take 15 or 20 minutes. Every five minutes saved using this system equates to one tonne of aviation fuel, so the system offers enormous cost savings to the airlines that will use it.

****

Away from technology momentarily for a public service announcement. The Red Cross reported this week that blood stocks have reached critically low levels, as they are receiving donations at only half the rate they need to maintain stocks.

Blood donors are urgently required to bring these stocks back up to safe levels, so if you have any blood to spare--and let's face

it, you didn't spill any at the Divisional AGM yesterday (HI) -- please contact the Red Cross and make a donation. You'll find them in the White Pages under "Red Cross".

-- Thanks to the "Sydney Morning Herald" and "The Australian"

****

THE AMATEUR WHO INVENTED MAGNETIC TAPE RECORDING NOW SILENT KEY

Marvin Camras, W9CSX, who is credited with the invention of magnetic tape recording, died June 23, 1995, in Evanston, Illinois. He was 79 years old and lived in Glencoe, Illinois.

According to The New York Times, Camras worked and taught at the Illinois Institute of Technology for more than 50 years. As a student in the late 1930s, he built a magnetic wire recorder and later discovered that making recordings on magnetic tape made splicing easier. In 1944 he was awarded a patent on ''method and means of magnetic recording,'' the Times said.

Camras received the National Medal of Technology in 1990. He was awarded more than 500 patents for his work and they were licensed to more than 100 manufacturers.

The Times said that Camras exhibited an early aptitude for building electrical devices, including a flashlight at age four and "a transmitter" three years later.

Marvin Camras was first licensed as W9CSX in the late 1930s and held that call sign until his death. Among his survivors are his wife, Isabelle P. Camras, of Glencoe.

SPACE NEWS

ARRL Space Bulletin number 9 reports that the launch of the Space Shuttle Atlantis occurred on Friday, June 27, 1995 at 1932 UTC. The mission, designated STS-71, carries the Shuttle Amateur Radio EXperiment or SAREX. Amateur Radio-licensed astronauts Ellen S. Baker, KB5SIX and Charlie Precourt, KB5YSQ will operate a 2-meter FM voice radio to make contacts with amateurs and student groups. This same radio will also facilitate a rendezvous and docking with the Russian Space Station Mir. Docking will occur approximately 2 days after launch, and separation is scheduled approximately 7 days after launch. Most SAREX activities are planned for after the shuttle and space station separate.

****

For the first time, the U.S. Immigration and Naturalization Service, after some prodding by the U.S. State Department, will

officially allow two aliens from space to land in the United States.

It seems that U.S. entry visas for cosmonauts Vladimir Dezurov and Grennady Strekalov were forgotten before the launch of Mir-18. They were launched from Kazakstan on March 14 and are scheduled to land either in Florida or California in early, July aboard the Space Shuttle Atlantis (STS-71). The U.S. State Department has, for the first time, asked for a waiver for "aliens from outer space." The INS has agreed not to arrest the cosmonauts for illegal entry into the United States.

IPS Report
IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(23 JUNE - 29 JUNE)

ISSUED ON 30 JUNE 1995

SUMMARY

Date 23 24 25 26 27 28 29
10cm 72 71 71 71 72 74 78
A 8 5 14 24 9 9 (5)
T 23 30 22 32 22 23 21

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 23RD TO 24TH, AND 28TH TO 29TH JUNE; QUIET TO ACTIVE ON 25TH, UNSETTLED ON 26TH, AND QUIET TO UNSETTLED ON 27TH JUNE.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR 26TH WHEN VALUES WERE ENHANCED BY TEN PER CENT. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 25TH JUNE.

FORECAST (30 JUNE - 06 JULY)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES, WITH SOME SPORADIC E LAYER.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club welcomes everyone to an Auction to be held at its clubroom next Saturday the 8th of July.

The doors will open to buyers and browsers at 11:30 am. Sellers will be able to register their goods for sale commencing at 9:30 am.

In a system similar to other ham auctions, the club will charge a 10 per cent fee to a maximum of $25. Payment for goods may be made with cash, cheque or credit card but obviously, cash is preferred. The dulcet tones of Dave VK2KLV will be heard as auctioneer.

Drinks, tea and coffee and a sausage sizzle will be available for lunch and if the weather is cold, a pot belly stove to huddle around. Talk-in will be available on the Liverpool 2m repeater 6625.

The venue will be the halls of the Glenfield Scout Camp in Cambridge Avenue at Glenfield. Just follow the signs!

See you there.

Brad VK2QQ Publicity Officer

Club news: Illawarra

The Illawarra Amateur Radio Society advise ALL members that the A.G.M will be held on July 11th starting at 7:30pm sharp in the S.E.S headquarters Montague Street North Wollongong. A reminder that membership fees are to be paid by the August meeting.

--Brian VK2UBF.

Club news: Manly-Warringah

Members of the MANLY-WARRINGAH RADIO SOCIETY are advised that the Society's Annual General Meeting will take place on Wednesday 12 July, at the Warringah Volunteer Services Centre, Terrey Hills.

The meeting starts at 8pm, and all club members are encouraged to attend, and hopefully nominate for Committee positions as well! See you there!

--Richard VK2SKY, MWRS Publicity Officer

Club news: AAPRA

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

THE ROSE PACKET RADIO NETWORK WILL EXPAND IN THE NEXT WEEK BY ABOUT 100 REPEATER SWITCHES. THIS HAS BEEN ACHIEVED BY COURTESY OF TONY VK2TJF AND CRAIG VK2BTQ AT MACQUARIE UNIVERSITY.

THEY HAVE INSTALLED THE TNOS SOFTWARE WHICH PROVIDES A TRANSPARENT LINK TO TAMPA, FLORIDA IN THE USA. BRIAN KO4KS, THE AUTHOR OF TNOS, HAS PROVIDED THE LINK AT TAMPA END OF THE LINK.

THERE IS A ROSE SWITCH VK2AAB-4 UNDER TEST ON 145.050 MHZ.

FROM THE ROSE NETWORK YOU CAN CONNECT TO STATIONS IN THE SOUTH EASTERN USA, ILLINOIS, TEXAS, OKLAHOMA, MINNESOTA, LOUISIANA AND ARKANSAS.

AT PRESENT WE ARE ASSEMBLING INFORMATION ON THE STRUCTURE OF THE NETWORK AND THE SERVICES AVAILABLE. THIS INFORMATION WILL BE CIRCULATED AS SOON AS POSSIBLE. AT PRESENT ONLY STATIONS IN SYDNEY CAN SAMPLE WHAT IS AVAILABLE. AS SOON AS WE LINK 145.050 TO THE REST OF THE NETWORK IT WILL BE AVAILABLE TO ALL.

Club news: St George

The next meeting of the St George Amateur Radio Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakeseley Rd., South Hurstville at 7.30 pm next Wednesday evening the 5th of July 1995.

As no guest speaker has been arranged for this month, it will be an ideal opportunity to have a ragchew with fellow menbers and visitors.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from Allan VK2XF Publicity Officer

Club newes: Blue Mts.

The Blue Mountains Amateur Radio Club invites one and all to our July meeting. It has become a tradition that Blue Mountains Amateur Radio Club puts on an interesting guest speaker every month; indeed, our executive works very hard to ensure that we maintain this tradition of our. However, this month we have failed to find an interesting speaker. Since I was partly responsible for this fiasco, it was almost unanimously agreed at our last executive meeting that I had better fill the gap.

So it is with some reluctance I am recommending this shy little guy from Wentworth Falls who is going to speak on a variety of subjects such as:- repeaters
FM modulation
5/8 versus 1/4 wave antennas for mobile use
radiation resistance
the first digital mode

The meeting will be held at the Blue Mountains Amateur Radio Club usual venue on Friday, 7th July, 1995 at 8.00 pm, Springwood High School, corner Grose Road & Chapman Parade, Faulconbridge - enter from Chapman Parade. The customary refreshments will be served.

As always the meeting is open to anyone, but I would especially like to invite Michael Corbin, who's been a club member for a couple of years, but so far has always been too busy on the first Friday of the month. How about it Michael? Come and see us please.

Alex, VK2ICL
Publicity Officer

Club news: Castle Hill

NEWS NEWS NEWS NEWS NEWS NEWS NEWS
FROM
CASTLE HILL AMATEUR RADIO CLUB

The next meeting of the castle Hill Amateur Radio Club will be held on this coming Wednesday, the 5th of July.

We are all fairly well aware what can happen when radio amateurs join committees - enough said.

Computer journalist Paul Zucker (VK2ZPZ) and Ian O'Toole (VK2ZIO) have just spent 2 years on the Glenorie Public School computer committee and have helped assemble a veritable array of computer equipment for far less than the cost of a legal case.

Club members are invited to visit the innstallation this Wednesday. We will assemble at our normal venue at 7.30, to arrive at Glenorie for an 8 p.m. start.

As well as looking at the installation and viewing some of the educational programs, we will also be looking at a range of CD-ROM ham shareware.

Visitors are most welcome to attend.

For further details, contact Ian O'Toole, VK2ZIO on (02) 680 2112.

Club news: RAOTC

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday July 3rd.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2400 ZULU)
145.700 MegaHertz FM
AND
7.060 Megahertz LSB
3650 MegaHertz LSB

11 AM. MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0200 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (1030 HOURS ZULU)
3650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom are OK in any call book.

Club news: Veterans Group

The next meeting of the Veterans Amateur Radio Group on July 20th will be a special one. The Group has been invited by Ric (VK2PH) to meet at 11.00 am at his home at 37b The Point Road Woolwich to view his collection of early radios, old telephones, music boxes and phonographs. As usual bring your lunch, tea or coffee provided. For those who prefer to come on foot, easy access is available by ferry to Valentia Street from no. 5 wharf Circular Quay. On this occasion please let Franklyn (VK2DYP) know by 'phone 452 5172, if you are coming.

73 de Franklyn VK2DYP

This may be true with the older, primitive scrambling methods of
yesteryear, but certainly not true with the new advanced baseband and
variations of SSAVI that are in use by most cable companies today.

170. Down east Micro 70cm to 10 meter rig Radio Shack ???

Hello and thanks for reading this message. I would like to hook up a
Down East Micro 70cm to a 10 meter radio shack rig I have sitting on a
shelf in my shack collecting dust.

Has any one out there been able to pull this off?
How?
Any info welcomed.

Good stuff, but you can get a package deal for the software alone for about the same price directly from w5yi that goes novice to extra. It does not include the Gordon West book, also worthwile IMHO, that the $30 R/S nocode package does.

For learning code, IMHO, nothing beats CodeQuick from Wheeler Applied Research.

73,

Geoff.

From: wa3afs@aol.com
Message-ID: <3tbc6j$6gc@newsbf02.news.aol.com>
Source record: 243126

I have had experience with 2 DSP units:
- Magic Notch -- Did a SUPER job of removing a single heterdyne. (But
I kept running into cases
of multiple heterdynes!)
- JPS NIR-10 -- I wouldn't allow a single electron to enter my
antenna without this unit being
turned on! It does a lot of things like
removing background noise, multiple
heterdynes, and other stuff which I still
have not figured out all the
possibilities. I guess I am quite happy
with this unit. Once in a while I turn the
unit off when listening to a faint SSB
station and find that it totally
disappears into the noise.
Operating field day without this unit was a
torture for me. I have been so
spoiled.

However, if you're interested in the Maia/West GROL text, you can (well I
did, I don't know if you still can) get it cheaper at RS than through W5YI.
I asked Fred some time ago and the answer is that RS bought a much bigger
press run than W5YI did. Go figger'.

>James Messer
>KE4LAY
>

The tips abt using a jack are good, but before you hook up the car jack and start pulling, take hold of the vise-grips and rotate it (and the ground rod) back and forth a few times. If you can't do it with the vise-grips, get a pipe wrench and cheater pipe. The idea here is to break the grip the earth has on the rod. After it is free in the hole it will pull easier.

Of course, if if was my choice, I would just hacksaw it flush with the ground and install a new rod at the new house. $10 is $10, but my time is worth something to. (My $0.02 worth)

Good luck.

: >: >and others are coming. In addition, the complexity of the gear required
: >: >is, in reality, not much more than a simple CW rig, modified to shift its
: >: >carrier as in the Pactor mode.

: Another anti-code person who believes that it's only proper to
: communicate with the aid of a machine (that someone else designed
: and built) rather than using his given senses.

Another misrepresentation (nothing new from the keyboard of Herman, but we
love him so for it). The point is that we advocate the discontinuance of
Morse code testing. On the other hand, if there are those wish not to
contribute to the advancement of the the radio arts despite the obvious
advantages of digital communications, far be it from me to discourage them
from their endeavours. However, luddite behaviour does not justify that
everyone be burdened with coerced learning of the Morse code. It is
obvious that those who advocate Morse code testing are terrified by the
realization that unless amateurs are forced to learn Morse code, it would
be soon classified by the majority of amateurs (if not already) as a
quaint means of communications which has little or no usefulness in modern
telecommunications milieu.

: >: You forgot the computer, again.
: >: As was said, we have been through this over and over and over... You
: >: don't need a computer to do CW for you. There are circumstances under which
: >: this is significant, and make CW a better choice. NOT a better modulation, a
: >: better choice under the circumstances.

: >If your objective is simplicity, then go for signals mirrors, smoke
: >signals or drums. In those instances, you do not even need a radio.

: Simplicity + DX does not equate to signal mirrors, Jim. Try working
: 20M with drums. One wonders why you'd ridicule a mode in which one is
: able to construct a transmitter for, and, along with one's mental powers,
: work the same station that you want to work with your machine.

The essence of the advancements of radiocommunications is finding better
and cheaper means with greater reliability to transfer that information.
When compared to digital modes, CW is regressive. Yet the
pro-code-testing advocates always proclaim the simplicity of CW as an

overiding consideration. In response, if one wishes for simplicity, use a non-technical means of communications. If this however is unnacceptable, the digital communications technology is only incrementally more complex that a CW transciever to the point that the difference is trivial.

Those of us who indeed are communicating with digital technologies have an obvious advantage from those who constantly disparage digital communications - "Been there, done that" I believe is the expression. Those who advocate the continuance of Morse code as a modern means of communications speak only from ignorance and with predjudices what would be shattered upon the discovery that their preconceived notions are without foundation after experimenting with modern radiocommunications technologies.

: >The selection of CW would seem to preclude, indeed deny, the
: >opportunity to use more advanced technologies that are available to
: >amateurs.

: Why use RF when you can use AT&T? You're not using the most advanced
: technology if you're not using the telephone, Jim. You're a
: techno-anchor advocating fickle atmospheric propagation rather
: than fiber optic cables and satellites. You ought to be ashamed
: of yourself.

The shame is equally shared by all amateurs, regardless of the preferred mode of communications. Therefore, there is little to be gain in response to this infantile diversion from the discussion.

: >The selection of CW would seemingly be selected for one purpose in mind,
: >being the simple solution.

: So complexity is good. I see. Tell me what to do with my scanner
: and its blown custom-made no-longer-available IC.

Salvage what you can and then throw the rest away. Use it as a learning experience so that the next scanner that you buy, you will consider the availability of spare parts if indeed it becomes inoperable.

: >73 and live better digitally
: >Jim, VE3XJ

: 73 and live better through simplicity,
: Jeff NH6IL

If the objective is strictly simplicity, that is the choice of the individual. However, after it has been effected, the results are often much less than satisfying.

180. 1 Hour Code Course?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-04 00:00:00 UTC
From: dsparks@deltanet.com
Message-ID: <NTe+vYD2ik6R083yn@deltanet.com>

[My apologies if this is a duplicate post. I tried posting it last night, but the news server was having problems, and I strongly suspect it never went out...]

They say that anything that sounds "too good to be true" ... probably is... In the July issue of "73 Amateur Radio Today", the publisher (Wayne Green) is offering for $5.00 what he calls the "1 Hour Code Course". It's described as follows:

Anyone (including you) can learn the Morse Code in one hour!
Forget the No-Code License and get your Tech-Plus Ticket!
Guarantee: You'll pass the 5 wpm code test with Uncle Wayne's system or YOU GET A 100% REFUND!

Has anyone ordered and received this? What's the gimmick? Does it work? The description doesn't indicate whether it's a book, or a tape, or a computer program, or what.

Dave Sparks -- KD6PDZ -- dsparks@deltanet.com

181. DR600

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-04 00:00:00 UTC
From: Thomas Martin <tmartin@freud.inst.com>
Message-ID: <3ta7ka$2en@freud.inst.com>
Source record: 243135

Has anyone had a problem with an Alinco DR600TB. I bought one about 2 months ago and it would loose the memory channels about every 3rd or 4th time I turned the power on. I exchanged it and now 6 weeks later, the VHF side has burnt up. The antenna and feed line check fine but the reciever and transmitter are gone. I also can smell somethine burning.

The point is. I can turn the radio in on trade and get a different brand after I get it back from being repaired. I like the features of this rig and would like to keep it but if it is built with poor design I will trade it in for a Yaesu or Kenwood.

Thanks in advance for any insight.

The North Kitsap ARC (NKARC) along with several other club in the Pacific Northwest will be operating WW2END (that's
right) from the decks of the ex-USS Missouri, at the Puget Sound Naval Shipyard. This will happen 1 and 2 September 95.
For more information, drop me a note at jchevere@kendaco.telebyte.com.

Joe
73 de N7YMR

I goofed!!!! The correct dates are 1 and 2 September 1995. Sorry about that. Joe N7YMR

183. DSP experiences and comments please

Do the DSP's really work? Will they pull out say an s7 ssb signal that
is being blocked by an s9 heterodyne from a foriegn broadcast station on
40 meters? Any experiences or recommendations as to brand or model would
be most appreciated.

Message-ID: <RI78fRB.armond@delphi.com>
Source record: 243191

Good stuff there! You may wish to add one of the most important steps in learning the code and that is doing it EVERY day. I would suggest right after dinner when you should relax a little anyway. So many people skip the daily session and then slug it out for an hour on Sunday. When people would say that they didn't have time to study the code I would tell them to just quit the whole idea then because what was the point, they wouldn't have any time to get on the air!!!! I've suggested a tape recorder in the car so as to get in a few minutes driving to work, store, etc.

>have any time to get on the air!!!! I've suggested a tape recorder in the
>car so as to get in a few minutes driving to work, store, etc.

These are really good tips. Also... here's a wierd idea... Teach yourself the code at 20-25 WMP. I was originally a Novice licenced in 1990. I learned the code at 5 WPM, then went into the Navy and forgot everything in the following 4 years. Now, I re-taught myself at 25 WMP, and I took and passed Element 1C last month! I've already passed the Tech written, and next month, I take the General, and so on, and so on! Looking back on it, teaching myself at 5 WMP was about as difficult as teaching myself at 20+. I worked with the following methods:

1)I used a tape in the car back and forth to work (about 30 min/day)

2) At nights, I used a computer program. I set it up to copy random groups, at first 2 characters to the group, then 3, then eventually up to 10. This taught me how to lag copy effectively.

3) One warning, though. When I started to copy stuff on the air, about a week before the test, I found that I had no problem, as long as I had the keyboard in front of me. I had circuted my brain such that "._" meant "Left pinky - middle row", rather than "A". I spent the next week listening hard on the air, with the tapes and with the computer, but with a pencil, not the keyboard. (since I was fairly sure the VEC wouldn't let me have a computer) Now that I've passed it, I find that I tend to go back to the keyboard, but that's OK, I guess. I know I can do it without, if I have to.

Anyway, good luck to you. My biggest problem now is that fact that I can't send NEARLY as fast as I can copy (I've got a straight key, and I can't seem to get faster than about 14-15 wpm. The wrist just won't do it...)

>i was wondering the effects of chargeing a ICOM HT battery with a
>high amp power supply <7a@12v> instead of the small charger that came
>with the radio.

Hi Dave,

If the current limiter is in the charger, the battery will blow up,
if it is in the set, it will charge. Best is to try and let us know
what happened. :-)

Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

{ better late than never I suppose - it finally turned up 5 days late }
Good morning. It's Sunday the 2nd of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners. And a special good morning to those listening from VHF NFD sites today.

We start with this week's headlines:-

GR prefix special event callsigns will be available for stations commemorating the 50th anniversary of VJ-Day.

And clubs and special interest groups are invited to put on a free display at the RSGB Stafford Amateur Radio and Computer Show.

The GR - that is, 'Golf Romeo' - prefix will be available for special event stations commemorating the 50th anniversary of VJ-Day in August. It should be noted that GR-prefix callsigns are not a general issue; rather they are an alternative to GB callsigns for bona fide stations commemorating the 50th anniversary of the end of the Second World War. Anyone wishing to apply for a GR special event station callsign - or if you have already applied for a GB call to commemorate VJ-Day and wish to change it to a GR callsign - should contact Mrs Fiorina Sinapi {pronounced sin-ar-pea} in the Amateur Radio Department at RSGB Headquarters as soon as possible.

At this year's RSGB Stafford Amateur Radio and Computer Show, there is an opportunity for radio clubs, societies and special interest groups to put on a display free of charge. The event, which incorporates the RSGB National Convention, takes place at the County Showground, Stafford on the 19th and 20th of August. If your club would like to take advantage of this offer, call 01 923 893 929 for a booking form. More details are on pages 54 and 62 of July's Radio Communication, which was posted to all members last week.

In a Gazette notice published on the 23rd of June, the Radiocommunications Agency announced licence changes which took effect on that date. The full text has been published in the July edition of Radio Communication. July's RadCom also contains the text of the RSGB's response to the recent CEPT Detailed Spectrum Investigation which recommends substantial changes, including some losses, to the VHF and UHF amateur bands.

Anyone not a member of the RSGB who wishes to receive a free copy of the July RadCom should send an A4-size self-addressed envelope, together with 43 pence in stamps, to RSGB Headquarters. Send it to: John Davies,

July RadCom, RSGB, Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3JE.

Morse test candidates are reminded that the DTI announced an increase in Morse test fees with effect from the 1st of July. The fee for the 12 words per minute Morse test is now 18, while for the Novice five words per minute Morse test it is 13.

Now news of some special event stations on the air this week:

Members of the Radio Amateur Relief Expeditions group should now be active as YR0R from Romania, until the 7th of July. Activity is on 10, 15, 20, 30, 40 and 80 metres, CW and SSB.

In order to commemorate the 75th anniversary of the Royal Corps of Signals, GB75RS should now be operating from Blandford Camp in Dorset until the 20th of July.

This weekend, the 1st and 2nd of July, GB5EPN is active from the Boat Museum at Ellesmere Port, celebrating the 200th anniversary of the borough of Ellesmere Port and Neston.

Also this weekend, the Amateur Radio Club of Fakenham will be putting GB100NT {that's "GB One Hundred NT"} on the air from Oxburgh Hall in order to celebrate the 100th anniversary of the National Trust. This is the first in a series of events from National Trust locations throughout the country which have been planned for the summer months. Next weekend, the 8th and 9th of July, the Colchester Amateur Radio Club will operate GB100NT from Flatford Mill.

GB0TLF will be on the air from the 1st until the 15th of July to celebrate the Tameside Leisure Festival. The station will be operated by members of the Tameside Amateur Radio Society, the Manchester and District Amateur Radio Society and the Glossop Amateur Radio Society in order to promote leisure activities, including amateur radio. For further details contact Harold Jeffrey, G0VJZ, on 01 61 338 4412.

Today, the 2nd of July, the Trowbridge and District Amateur Radio Club will operate GB125BRC in conjunction with the British Red Cross at a family fun day at Lackham College, near Chippenham, in Wiltshire. Activity will be mainly on 15, 20, 40 and 80 metres and visitors to the station are welcome.

Next weekend, the 8th and 9th of July, the Scarborough Special Events Group will be on the air as GB5SY in order to celebrate the 150th anniversary of the Scarborough to York railway. Four stations will be active on HF SSB and CW, 2 metres and 70 centimetres and a special full-colour souvenir QSL card will be available. Further information can be obtained from Roy Clayton, G4SSH, whose address is correct in the current RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Libya, four Ukrainian amateurs plan to sign 5A2UA and 5A3UY from the 2nd to the 17th of July on all bands CW and SSB.

From Jordan, His Majesty King Hussein, JY1, has been active once again. He was reported operating on 14240 kHz on the 22nd, 23rd and 27th of June at various times between 1700 and 2300 UTC.

And from Bermuda, G3AVJ will be operating as G3AVJ/VP9 from Sunday the 2nd of July until Wednesday the 26th of July. Check 14133 kHz, plus or minus QRM, in late afternoon and early evening.

Next the Rally News:

The York Radio Rally is taking place today, Sunday the 2nd of July, in the Tattersall Building at York Racecourse. The doors open at 10.00 am and talk-in is on 2 metres, channel S22.

On Saturday the 8th of July, the Cornish Amateur Radio Club will hold its 32nd radio rally and computer fair at Penair School, Truro. The event features a large hall with trade stands a bring and buy stall, and official Morse code tests. The doors open at 10.30 am and talk-in is on 2 metres, channel S22. For further information contact Ken, G0FIC, on 01 209 821 073.

And on Sunday the 9th of July, the Sussex Amateur Radio and Computer Fair will take place at Brighton Racecourse. The event starts at 10.30 am and will feature trade stands and a giant bring and buy stall. Talk-in is on 2 metres channel S22. For further details contact Ron, G8VEH, on 01 903 763 978.

Now for the HF contest news:

There are no RSGB HF Contests this weekend.

The IARU HF Championship will take place next weekend, from 1200 UTC on Saturday the 8th of July, for 24 hours. Exchange a signal report and the ITU Zone - the UK is in Zone 27. IARU member society official stations will send their society abbreviation. The contest is on all bands from 1.8 to 28 MHz, except the WARC bands. Brief rules are printed on page 20 of the July RadCom.

The RSGB mixed-mode SWL contest runs concurrently with the IARU HF Championship. The rules can be found on page 32 of the June 1995 RadCom.

Next some VHF contest news:

One of the major RSGB contests, VHF National Field Day, is taking place this weekend, the 1st and 2nd of July, until 1400UTC on Sunday afternoon. The full rules are in the May 1995 RadCom.

The 3rd RSGB 144 MHz Backpackers contest is taking place today, Sunday the 2nd of July, from 1100 to 1500 UTC. The full rules are on page 83 of the April RadCom

And the 2nd 50 MHz Backpackers contest will take place next Sunday, the 9th of July. The rules are also on page 83 of the April RadCom.

And now the solar factual data:

The period from the 19th to the 25th of June saw solar activity at very low levels and the geomagnetic field decline from active conditions. There was also a transatlantic opening on 50MHz. Sunspot numbers declined slightly over the period. The mean level was 26. Solar flux remained steady throughout the period and averaged 72 units. A few uncorrelated sub-flares took place in the first few days of the period. The electron fluence increased from moderate levels to very high levels by the 22nd, then declined slightly but was still at a high level on the 25th. The X-Ray flux increased to B1.0 units by the 20th, but then declined to A3.6 units by the 25th. The average for the period was A4.9 units. The 90-day solar flux average on the 25th was 77 units, one unit down on last week.

Geomagnetic conditions declined from active levels on the 19th, with an Ap index of 24 units, to quiet conditions by the 24th, with an Ap index of only 6 units. The average for the period was Ap 13 units. The aa indices, as supplied by the British Geological Survey for the 13th to the 19th of June, saw levels increase from quiet conditions, with only 5.8 nanoTeslas on the 13th, to sub-storm levels by the 19th, with 49.9 nanoTeslas recorded. The average for the period was 19.5 nanoTeslas, about K2.

I'll repeat the figures: spots - 26, flux - 72, Ap index - 13, X-Ray flux - A4.9.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the 16th to the 22nd of June, averaged 6.3MHz. The best day was the 18th, with levels up to 7.0MHz. The darkness hour lows averaged 3.2MHz. On most days, the daytime highs took place between 2000 and 2100 hours, but they were much earlier on the 18th and the 19th, at 1300 and 0900 respectively. The darkness hour lows took place between 0300 and 0400 hours. There were Sporadic E openings every day on 50MHz, extending to North America on several days. Sporadic E was also reported on the 2 metre band. G2FKZ, in Wakefield, reports observing a bright visual aurora during the late evening of the 23rd.

I'll repeat the figures: highs - 6.3MHz, lows - 3.2MHz.

And lastly the solar forecast.

The more active side of the sun will be rotating into view, so solar activity may increase to low levels. Solar flux levels are expected to increase to the low 80s. Geomagnetic activity is expected to be mostly quiet throughout the coming week. Ionospheric MUFs during daylight hours are expected to be about 19MHz for the south and 16MHz for the north, and the darkness hour lows are expected to be about 12MHz. Sporadic E could well be very good again this week, with further transatlantic openings on 50MHz. On the more intense days, sporadic E could reach 144MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Echo and G7 Uniform Sierra series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Echo series.

You could run all of the rigs into dummy loads, making sure the rigs are
on lo power. If you are all located within a couple of rooms of each
other this should work.

Chris

Regarding the statement in the latest Newsline :

"Now, after a year and a half of investigating, word on the street is, that the ax is about to fall on those who are believed to have corrupted the all volunteer testing system, out west."

I may be a little too sensitive, but I find this statement to be a little offensive. Just because there allegedly are some crooked VE's in southern California doesn't mean that the the entire VE system "out west" is corrupt. To folks "back east", it might come as a surprise that there is more to "the west" than southern California. To lump together all VE's west of the Mississippi is ridiculous. C'mon Newsline, "the west" is a big place...please try to be a little more precise when making statements such as this.

Mark AA7TA a non-corrupt ARRL VE "out west" in Arizona

>>have known better.

Often, _all_ new homes in an area have such restrictions. And since hams make up such a small portion of the home buyer market, threatening to look elsewhere for a home has negligable impact on the new home builders. It's sad, but I see no immediate solution. Courts tend to side with the CC&Rs.

>> Anyway, there is an antenna restriction that

>>pace of technology. If I decided to erect the tower that I've wanted
>>since I was 12 years old, what are my changes of being successful at
>>challenging the restrictions? Has anyone in this area had a simular

At the time, I was not involved in amateur radio, but I do remember when in my old neighborhood there were prohibitions against all outdoor antennas. About 1/3 of the houses nonetheless had satellite dishes installed. No one complained until a ham up the street erected a 20m yagi. The ham was sued by one of the other neighbors for the CC&R violation. The ham's response was to countersue everyone on the block with a TV or satellite antenna (including us), but said that he would drop his litigation if the neighbor sueing the ham dropped her suit. This resulted in quite a bit of pressure from fellow neighbors being put on the one suing the ham. All suits were soon dropped and the yagi stayed up.

While the tactic may seem questionable to some, it does illustrate how assinine some CC&Rs really are and they either apply to everyone in a housing tract, or to no one.

I wish you luck.

George,

As I understand it, the tradeoffs are largely gain and bandwidth. A monoband Yagi antenna (or even a tri-bander) will have more gain and narrower bandwidth (at resonance) than a log periodic. The primary advantage of the log periodic (as my understanding of the two goes) would be the exceptionally wide bandwidth of the antenna system. Perhaps some of the others will go into greater detail regarding F/B ratios, directivity, patterns and etc., but I'm betting that all of those will be secondary.

>73, Moritz DL5UH

The current limiter is in the set, as far as I can tell. I have done this very thing for several years now, with no problems at all (and no exploding batteries, either). Actually, the stock charger is just a standard power supply rated at 12V, 200mA. That alone would blow up the battery pretty quick. So go with it!

Have fun!

Hello,
You can download a series of mods on this transmitter from oak.oakland.edu under
the hamradio\mods subdirectory.
I believe there are 3-4 files on that radio in there.
Hope that this helps out.......

Another option is to use an automobile jack, working against a clamp
or pair of vice-grip pliers attached to the top of the rod. This is
handy because as the rod comes out you can shift the clamp down and
get another grip.

>
>Has anyone ordered and received this? What's the gimmick?

Hi Dave, in previous NSD editorials, Wayne has told how to pass the 5wpm CW test the easy way. 1. Visually learn the code; 2. During the 5wpm CW exam, write down the dots and dashes; 3. During the multiple guess part of the test, manually mentally decode only what you need to answer the questions. I don't know if the one-hour-method above follows this previously suggested pattern or not.

My comment: It works for 5wpm multiple guess if the VEC will allow it. It won't work for 13wpm.

I learned 5wpm 43 years ago on an Instrograph. It took me no more than a couple of hours to reach 5wpm by storing the visual chart, in my head, e.g. A .- B -... etc., and then translating from aural to mental visual. dit-dah became dot-dash which is an 'A'. This method will get you up to 8-10 words per minute. Some say do NOT learn this way. I say, if you choose the easy way first, it will delay the difficulty until later. And by the time you need 13wpm, it may no longer be required. :-) If your *ultimate* goal is 10m SSB, there's no reason not to do it the easy way.

An average human brain will automatically unlearn the "bad" method and learn the "good" method if Morse code is used often for QSOs and you realize that you must eliminate the dot-dash mental step to achieve 13wpm. I appologize to all the hams who recommend initially learning at 100wpm so 5wpm will then seem slow. :-)

205. DXpedition to Pictou Island - XJ1CWI - Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-04 00:00:00 UTC
From: Jean-Fran&#65533;ios Gagnon <gagnonjf@aesdor.am.doe.ca>
Message-ID: <3tc4gd$h70@pollux.cmc.doe.ca>
Source record: 243209

DX-PEDITION ANNOUNCEMENT
XJ1CWI - Pictou Island, Nova Scotia

Members of the West Island Amateur Radio Club (WIARC) of Montreal will be Dx-peditionning to Pictou Island, a small island in the Northumberland Strait between Nova Scotia and Prince Edward Island, Canada (45&#65533;49'N lat., 62&#65533;35'W long.) between July 27 and August 3 1995 with emphasis during the IOTA contest (29-30 July).

Pictou Island is a rare island in the IOTA group (Islands on the Air, NA-154) and in the Canadian Islands Award group (NS-05). The special callsign XJ1CWI will be used.

Operations will be on or near the following frequencies (MHz):
CW and SSB (HF and VHF)
1.835, 3.510, 3.795, 7.050, 7.250, 10.110, 14.040, 14.195, 18.080, 18.120, 21.040, 21.320, 50.11 and 144.3
RTTY (HF)
7.090 and 14.090

We will also operate amateur satellites RS-12 Tx 21.220, Rx 29.420, RS-15 and popular Oscars.

Due to the declining propagation, much effort will go into good antennas on 40, 80, and 160 Meters. Operators of the 3 HF and 1 VHF/satellite stations will be: Reg (VE2AYU), Al (VE2DAV), Fred (VE2SEI), Jeff (VE2TBH), Helen (VE2YAK), Ben (VE3ISN), Al (VO1NO), Lowell (VY2OX) and Vicki (soon to be VE1?).

Time and active frequencies will be as propagation, weather, and operator stamina permit. Helen, VE2YAK will be especially looking for YLs.

I'd like opinions on this also, as I'm starting to learn the code myself. I have about 13 characters down right now. I'm using Super morse and I bought an MFJ deluxe code practice oscillator to practice sending what I've learned.

BUDDY10 (buddy10@aol.com) wrote:
: What is ,in your opinion,the fastest and easiest way to learn CW ?

One of the interesting things about CW teaching is that very little of the scientific research is used or acknowledged by hams. A nice review of the pre-1943 literature is given by Donald W. Taylor, "Learning Telegraphic Code", Psychological Bulletin 40, 461 (1943). I doubt if there is much after this since this research was done to try to expedite the trainging of operators during WW 2. A couple of interesting points are:

1. Only Bryan and Harter in 1897-99 documented plateaus in code learning and then just for 2 students. Other researchers don't find them. Taylor's conclusion was that they may exist but if so are rare.

2. While a lot of researchers used "Farnsworth" spacing, the one study where two groups of students were taught similarly except the first group used Farnsworth and the second standard spacing showed no significant difference in their progress.

3. The fastest reported (but not well documented) method to get people to 12 wpm for the 26 letters of the alphabet was by Koch for two groups who made it in 12 and 13.5 hours of practice. The method was to teach just two letters at 12 wpm and practice until these were mastered (90 percent accuracy). Then to add a letter and practice the three letters until they were mastered. The other letters were added in turn until all 26 were mastered. Maybe this should be added to the morse teaching computer programs if it is not already there.

4. Much of the review is of tests that would possibly indicate who is likely to be able to learn code quickly, since operators were needed for the war. This is less useful now since finding out you are either well or poorly suited to learning code won't help you much.

If your desire is to simply pass the U.S. exams without learning morse, you could try guessing randomly.

Many VE sessions give a multiple choice morse test of 10 questions each with 4 possible answers. 7 out of 10 correct is a passing score. A straightforward analysis tells us that the probability of guessing 7 or more correct out of 10 is given by the first 4 terms in the binomial expansion of (1/4 +3/4)^10. That is

p= (1/4)^10 + 10*(1/4)^9*(3/4) + (10*9/2)*(1/4)^8*(3/4)^2
+(10*9*8/6)*(1/4)^7*(3/4)^3 = 919/262144 = .0035057.....

or about 1 out of 285.

The probablility of passing within M attempts is

P(M) = p* sum from n=0 to n=M-1 (1-p)^n = 1-(1-p)^M .

This can also be derived by realizing the probability of
having failed after M attempts, 1-P, is the probability of failing
all M attempts, (1-p)^M.

Solving for M,

M=log(1-P)/log(1-p).

On average,
.1 of the examinees will pass within 30 attempts;
.5 of the examinees will pass within 197 attempts;
.9 of the examinees will pass within 656 attempts;
.95 of the examinees will pass within 853 attempts.

Simply guessing at enough VE sessions will eventually get you
through the exam, but even 197 attempts will cost you around
$400 and 1.5 years even assuming you can take the test 3 times (e.g.
sit for the 20, 13 and 5 wpm tests) at each session and can test about 4
times a month. With that much practice, you might actually learn morse.

The odds improve, of course, if you can get some of the questions
without guessing. Calculating as above:

Number correct p= probability of M(1/2)=Attempts so
without guessing guessing enough to pass on average 1/2 will pass
0 919/262144=.0035 197
1 655/65535=.0100 69
2 1789/65536=.0273 25
3 289/4096=.0706 9
4 347/2048=.1694 4
5 376/1024=.3672 2
6 175/256=.6836 1

This says that to make the task a little easier, you should
try to get 2 or 3 answers correct before resorting to guessing.

One question is what should you work on to try to get
2 or 3 correct answers? I suspect that correctly copying the
numbers in the text will allow you to answer 2 or 3 questions
correctly. However, I took my last morse test in 1968, so I
don't really know what kinds of questions appear on today's exams.

Borrow or rent a Hilte rotary hammer. Comes complete with a cupped tool
designed specifically for driving ground rods. Greatest thing since
sliced bread for driving ground rods.

210. The Amateur Radio INTERNET BBS - NEW Numbers!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-04 00:00:00 UTC
From: howardl@wb3ffv.ampr.org
Message-ID: <DB7qrK.AF5@wb3ffv.ampr.org>
Source record: 243214

The WB3FFV Amateur Radio Internet BBS has MOVED!! It now has NEW Telephone
numbers, and also a NEW Internet Address. Please be sure and update your
information on this system...

+--+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to most Internet services such as Email, FTP, TELNET,
Gopher, WWW, Callsign Lookup, Etc... Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET - bbs.abs.net

WWW - http://www.abs.net

FTP - ftp.abs.net

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-100/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC

MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my files listing into your uucppublic directory.

If you want to access the BBS via Telnet all you have to do is TELNET to bbs.abs.net, and login is 'bbs' with no password required. To use anonymous FTP just ftp to ftp.abs.net and login as 'anonymous'.

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

212. Dxpedition to Pictou Island - XJ1CWI - Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-04 00:00:00 UTC
From: Jean-Fran&#65533;ios Gagnon <gagnonjf@aesdor.am.doe.ca>
Message-ID: <3tc4i1$h70@pollux.cmc.doe.ca>
Source record: 243216
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DX-PEDITION ANNOUNCEMENT
XJ1CWI - Pictou Island, Nova Scotia

Members of the West Island Amateur Radio Club (WIARC) of Montreal will be Dx-peditionning to Pictou Island, a small island in the Northumberland Strait between Nova Scotia and Prince Edward Island, Canada (45&#65533;49'N lat., 62&#65533;35'W long.) between July 27 and August 3 1995 with emphasis during the IOTA contest (29-30 July).

Pictou Island is a rare island in the IOTA group (Islands on the Air, NA-154) and in the Canadian Islands Award group (NS-05). The special callsign XJ1CWI will be used.

Operations will be on or near the following frequencies (MHz):
CW and SSB (HF and VHF)
1.835, 3.510, 3.795, 7.050, 7.250, 10.110, 14.040, 14.195, 18.080, 18.120, 21.040, 21.320, 50.11 and 144.3
RTTY (HF)
7.090 and 14.090

We will also operate amateur satellites RS-12 Tx 21.220, Rx 29.420, RS-15 and popular Oscars.

Due to the declining propagation, much effort will go into good antennas on 40, 80, and 160 Meters. Operators of the 3 HF and 1 VHF/satellite stations will be: Reg (VE2AYU), Al (VE2DAV), Fred (VE2SEI), Jeff (VE2TBH), Helen (VE2YAK), Ben (VE3ISN), Al (VO1NO), Lowell (VY2OX) and Vicki (soon to be VE1?).

Time and active frequencies will be as propagation, weather, and operator stamina permit. Helen, VE2YAK will be especially looking for YLs.

Please address QSLs to:
The West Island Amateur Radio Club Inc.
P.O. Box 884
Pointe Claire/Dorval, Quebec
H9R 4Z6
Canada

and address inquiries to:
Fred Archibald (VE2SEI)
130 Embleton Crescent
Pointe Claire, Quebec
H9R 3N2
Canada
Tel: 514-694-3441
Fax: 514-630-4134

or Email to:
Jean-Francois "Jeff" Gagnon (VE2TBH)
jfgagnon@cmc.doe.ca

The special prefix is to commemorate the 100th anniversary of the first man sailing around the world in solo. In 1895 Nova Scotian Captain Joshua Slocum left Boston to begin his circumnavigation of the Earth in the 36-foot sloop Spray. Three years and 46,000 miles later he completed his journey, landing in Fairhaven, Massachusetts. This Nova Scotian Dxpedition to this semi-remote island will be dedicated to him.

From: jeffrey@math.hawaii.edu
Message-ID: <DB7rBF.AvI@news.hawaii.edu>
Source record: 243217

brian.carling@acenet.com (Brian Carling) writes:

>Jeffrey, use some smarts!
>The more that you insult someone in a public forum, the more they are
>going to insult you back in that public forum.
>Your pathetic attempts to manipulate and control people are not going to
>work!

Hi Brian,
I'm glad that we can bring this out in the open OFF of .swap. First of all, what insult? What control or manipulation? You're attempting to play Mr. Catalog-of-radio-prices on .swap and I pointed out the critical paragraph in that group's charter that frowns upon the behavior you're displaying. Blame Jay Maynard for writing the charter, not me for pointing it out to you (Hi Jay!). Pointing out the relevant paragraph of the charter was not `insulting' nor `attempting to manipulate and control people'.

Here's an analogy: Suppose there are two ham shops in your home town - one with higher prices than the other. Are you going to stand outside that store and warn every customer that enters of the higher prices? Hell no! And in fact that might even be illegal in some towns. But that's exactly what you're doing to our .swap store. Sheesh - let the buyers compare prices themselves rather than attempting to play Mr. Catalog and thinking you're going to rescue them.

Do you go to a hamfest and stand in front of a seller's table warning all who pass by about his prices? Of course not, but that's exactly what you're doing in our .swap hamfest.

>Any time someone posts a piece of used equipment at a price above retail
>people are GOING to respond and point it out.

Via email hopefully. If all 50,000+ readers publically pounced upon one seller can you imagine the mess it would create? Should we designate one price.pouncer? Should we hold an election? Or have you performed a coup d' etat and seized control of the moderatorship of .swap?

It's only human nature to want to make a profit (capitalism in action). We inflate our prices expecting counter-offers. Don't you make a counter-offer to .swap sellers? I sure do and have always been able to get a lower price on an item I've bought.

>Part of the reason is that
>we all remember when we were newcomers to amateur radio and were
>green enough to not know what used equipment prices were running.

Mr. Newcomer wants an HTX-100 10m xcvr. He reads .swap over a several
week period and sees prices ranging from $100 to $150. He also looks
in the classified in the back of each QST magazine (available at
libraries and bookshops and ham stores) and sees a similar price
range. He now knows what to offer an HTX-100 seller.

Let people take the responsibility to learn the prices themselves
rather than being a welfare price catalog for them.

>Trying to single me out for ridicule is not going to work JEFFREY, you
>oaf! There are plenty of others who will do the same over on r.r.s.
>when people try to rip off others.

Yes, and they've now seen the relevant paragraph from the charter that
pleads with them NOT to behave in that manner. Why do you think you're
exempt from abiding by the charter when the rest of the readers aren't?

For those of you who don't know what the heck we're talking about
here's what just occured on .swap:

It is an excellent movie, see it. Burt means that hams do not know
anything other than radio and that a movie would be above their heads.

Probably because it has been replaced with rec.radio.amateur.digital.misc
(both to be more general and because there was going to be another group
that didn't pass its group).

, but I'm not sure the easiest way to get this
>rod out of the ground! Can anyone offer suggestions?

No question about it - getting a 8ft rod out is way to labor intensive
for the sake of 10 balloons.
As for insertion, if you have a power grindstone, sharpen one end into
a good point - get a six foot ladder and even a 3 lbs hammer will send it
home.

Well Zack, for those of us who are not loaded with KW amps and stacked
arrays 6W6 is rare. I have had DX contacts interupted by DXers who had no
class. They are the same type of people that count sexual conquests as a
notch on a belt. Do not ask either type about love.

220. Apple Petition for Rulemaking "NII Band"

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-05 00:00:00 UTC
From: tedwards@Glue.umd.edu
Message-ID: <3tfhdv$3vg@zydeco.src.umd.edu>
Source record: 242986

[There is a "cyberlobbying" attempt to support Apple's new "NII Band"
proposal. Check out URL
http://www.warpspeed.com/appleniipetitionrelate_277.html
for more detail]

In the Matter of
Allocation of Spectrum in the 5 GHz Band
To Establish a Wireless Component of the
National Information Infrastructure

To: The Secretary

PETITION FOR RULEMAKING;

Apple Computer, Inc. ("Apple"), pursuant to Section 1.401 of the Federal Communications Commission's ("FCC" or "Commission") Rules, 47 C.F.R. Section 1.401, respectfully requests that the FCC initiate a rulemaking to create a new unlicensed wireless radio service consisting of 300 MHz in the 5 GHz range, which will promote the full deployment of a National Information Infrastructure ("NII"). This "NII Band" would extend the effective reach of the NII, making possible high-bandwidth access and interaction throughout a limited geographic area, where mobility is key, and providing as well for a wireless element of "community networks" serving a larger area.

Specifically, Apple proposes that the FCC:

* allocate for use as part of the NII Band the 5150-5300 MHz band, a shared private-government band that currently is not heavily used within the United States and has been allocated throughout most of Europe for unlicensed wireless local area networks;

* allocate for use as part of the NII Band the 5725-5875 MHz band, a shared private-government band that currently is used by unlicensed Part 15 technologies, industrial, scientific and medical ("ISM") devices, and Amateur operators; and

* adopt technical rules governing operation of unlicensed technologies in the NII Band.

The NII Band would provide capabilities that are not now possible using any other present or proposed technology: wired or wireless, licensed or unlicensed. It would support users engaged in ad hoc, peer-to-peer communications, those operating as part of a wireless local area network ("LAN"), and those communicating over longer distances, who lack access to adequate alternatives. It would hasten the full development of the NII and help to ensure that no segment of society will be excluded from tomorrow's information-based world. In short, an allocation of 300 MHz, within which unlicensed devices would

operate pursuant to an agreed set of technical rules, will assure that all Americans have the opportunity to participate in and benefit from a fully-developed, fully-integrated information infrastructure.

The essential characteristics of the NII Band are as follows:

* Adequate bandwidth: The NII Band would provide sufficient spectrum resources to accommodate a wide range of high-bandwidth video, voice, and high-speed data applications, up to 24 Mbps or more, for large numbers of users.

* "Part 16" operation: NII Band technologies would operate in protected spectrum and in conformance with an overarching set of technical rules.

* Open entry: All compliant technologies would be permitted to operate within the band.

* Equal access: All devices and types of communications would have equal access to the spectrum resource.

* Limited technical rules: Technical standards would be set at the minimum level necessary to assure equal access, giving manufacturers the flexibility to design a variety of devices suited to different types of communications needs.

* Longer distance: Users would be able to employ directional antennas without paying a power penalty, in order to support community networking and similar applications.

The bands proposed for use as an NII Band would build upon current spectrum allocations. In particular, the lower of the two sub-bands has been allocated throughout most of Europe for HIgh PErformance Radio Local Area Networks ("HIPERLAN"), while the upper of the two is used within the United States by unlicensed Part 15 devices. As a result, dedication of these spectrum resources to the NII Band would increase U.S. competitiveness and create new export opportunities by enabling U.S. manufacturers to develop products for use in both the NII Band and as part of European HIPERLAN networks; provide interoperability between U.S. and European markets, thereby furthering the creation of a Global Information Infrastructure ("GII"); and dramatically expand the applications that can be supported by, and the market for products operating in, the 5 GHz ISM band. Moreover, as discussed below, these goals can be achieved while accommodating most current and proposed uses of the 5150-5300 and 5725-5875 MHz bands.

: for more detail]

For those of you who have trouble typing looooong word URLs try

http://www.warpspeed.com/ Thank you Dewayne !

Apples proposal involves taking away One Hundred Fifty MHz of spectrum
from the Amateur Radio Service at 5.7 GHz and using it for a propriatary
high power vary wide band data network.

They are not satisfied with the current Part15 sharing of the same spectrum.

Comments are due to the Commission by the tenth of July.

During my going-on-ten years as antique radio columnist for Popular Electronics magazine, I've seen interest in the antique radio hobby grow by leaps and bounds. A little over a year ago, I decided to supplement the column--which is largely project-oriented--with a new publication devoted to systematically exploring radio history, hardware, theory and restoration practices. The result was The Radio Collector, a bimonthly newsletter edited for the thoughtful and inquiring reader who may also be a newcomer to the hobby. Contact me at ellis@interaccess.com to receive a detailed info package by e-mail.

Hello - this is my first posting,
I have heard a lot of good things about the ICOM IC-735 as a
reliable rig for a club and for use on expeditions. Also it seems to
be highly recommended for use on offshore yachts. I would like to ask
for any opinions on the use of the Yaesu FT-840 in similar situations.
This rig seems to be much more modern and I would like to know
if there are any advantages or disadvantages over the ICOM that
I have missed.The secondhand prices seem to be comparable in the UK so
I see no way of distinguishing between the two. I know that the Kenwood
TS-50 has also been recommended but this seems to fall into a higher price
bracket which our club cannot afford.
I am primarily interested in its suitability for use on a sailing
expedition and as a base station for university club use. A Trio TS-130
had also been recommended as a suitable cheaper alternative.

I would be grateful for any info/opinions on this and advice from
anyone who has experience in maintaining communications with a boat
travelling from the Mediterranean via the Red Sea and across the Indian Ocean.
I have heard that Maritime Nets exist but only have info about the States
and Pacific not the Indian Ocean. Many thanks for any help that you can
offer.

To all those concerned...

I think distribution of the image is wrong. There is some artistic merit in that immage.

Unlike the Yellow Pages and more importantly the White Pages and callbook. In the USA the white pages are not copyright because they have NO artistic metit at all.

Although minimal this drawing had some merit. Roger Harrison (Presuming he owns copyright and not the liquidator of the magazine) is entitled to payment for his work, just as you or I are.

Lets stop using the internet to distribute a drawing which has been publically noted that copyright exists on

SB QST ARL ARLB067
ARLB067 ARRL president steps down

On July 1, 1995, American Radio Relay League President George S. Wilson III, W4OYI, submitted his resignation from the office he has held since January 1992. Mr Wilson, who suffered a stroke on February 11, presently is in a rehabilitation hospital in Evansville, Indiana.

Mr Wilson said that while he has made progress in rehabilitation, his medical condition prevents him from traveling and from devoting the energy required to perform the duties of the office for the remainder of his term, which expires at the January 1996 meeting of the ARRL Board of Directors. He expressed his appreciation to the members of the Board for the opportunity to serve.

''The League has my undying love and support,'' he said.

In accordance with the ARRL By-Laws, First Vice President Rodney J. Stafford, KB6ZV, has been performing the duties of president since Mr Wilson became incapacitated in February. With Mr Wilson's resignation, Mr Stafford becomes president for the remainder of the term. The next ARRL vice president in the order of succession, Jay A. Holladay, W6EJJ, becomes first vice president.

Upon completion of the rehabilitation program in Evansville, Mr Wilson will return to his home in Owensboro, Kentucky.

All Amateur Radio-licensed delegates and observers to the
International Amateur Radio Union Region 2 conference in Canada in
September have been extended temporary operating privileges for the
duration of the conference.

Industry Canada, the country's licensing authority, extended the
privileges. The conference, to be held in Niagara Falls, Ontario
September 25 to 29, 1995 will have an amateur station, CY3IARU,
operating from September 22 to October 1.

The conference, formally called the XII General Assembly of
Delegates, IARU Region 2, is being held in Canada for the first
time, and will be hosted by the Radio Amateurs of Canada. It will
be followed by a meeting of the IARU Administrative Council.

Not true, I watched in amazement as a kid wrote - and | for dots and dashes at 13 wpm test, then wrote the letters above them to pass. He was sweating like a pig when done, and still shaking, but he passed

>An average human brain will automatically unlearn the "bad" method and
>learn the "good" method if Morse code is used often for QSOs and you
>realize that you must eliminate the dot-dash mental step to achieve
>

True, the same individual now has his extra license and can copy code at over 25 WPM.

Now from someone who tried every method to short cut, none worked for me, then I tried the 20 minutes a day for weeks, still didn't work, an ex marine radio operator told me, 20 minutes, ha, I didn't get a 20 minute break in 8 hours (probably walked 20 miles in snow to get there also).

I modified a code practice program pulled off the net, to send groups of 5 letters over and over, random, but always the same 5 letters. I listened for 2 to 3 hours a day for 2 weeks, first one group, then another, then mixed groups, and finally all letters and numbers. I passed the 13 WPM fine, would have gotten the 20, except I didn't learn the double dash, or punctuation which would cause me to miss the next 4 or 5 letters afterwards.

I would like to say I still use it, but I don't much, always intend to get back into it, but haven't. Must be lazy, or maybe it is because I spend to much time building my own stuff and restoring antique gear. I did get a Vibroplex bug, so I may start using it to say I am using a bug.

I must say though, with the style of learning I did, I can still 5 years later copy almost as well as the day I took the test.

Finally! The first INTELLIGENT remark about CW all summer!

BU>What is ,in your opinion,the fastest and easiest way to learn CW ?

Hello Buddy. I started with a friend using a CW practice oscillator, and
went to classes at a local technical school. I also used tapes and
records, but the MAIN thing I did was listening to hams on the air,
in the NOVICE segments of the bands, i.e. 7100 - 7150 kHz mostly.
Once I had the speed up enough to pass the easiest test, I found that
the best way to build up my speed was to get on the air and make
contacts. AT first I would only get about 50% of what the other station
sent, but eventually I got more and more. It was worth the effort.
Now I have a blast on CW. I can make contacts when the guys who only
operate SSB and digital modes are sitting around waiting for someone
to talk with them! Last night I chatted with stations in Hungary and
Macedonia even though propagation has been awful, and I only have a
100 watt rig with a low dipole antenna.

Happy CW learning! 73 de AF4K, Brian

From: Jean-Fran&#65533;ios Gagnon <gagnonjf@aesdor.am.doe.ca>
Message-ID: <3te8vl$4iv@pollux.cmc.doe.ca>
Source record: 243058

DX-PEDITION ANNOUNCEMENT
XJ1CWI - Pictou Island, Nova Scotia
Amendment 1, 1995-07-05

Members of the West Island Amateur Radio Club (WIARC) of Montreal will be Dx-peditionning to Pictou Island, a small island in the Northumberland Strait between Nova Scotia and Prince Edward Island, Canada (45&#65533;49'N lat., 62&#65533;35'W long.) between July 27 and August 3 1995 with emphasis during the IOTA contest (29-30 July).

Pictou Island is a rare island in the IOTA group (Islands on the Air, NA-154) and in the Canadian Islands Award group (NS-05). The special callsign XJ1CWI will be used.

Operations will be on or near the following frequencies (MHz):
CW and SSB (HF and VHF)
1.835, 3.510, 3.795, 7.050, 7.250, 10.110, 14.040, 14.195, 18.080, 18.120, 21.040, 21.320, 50.11 and 144.3
RTTY (HF)
7.090 and 14.090

By popular demand, we will operate even more satellite than previously announced, namely:
RS-10, RS-12, RS-15, AO-10, AO-13 and FO-20
on the voice and CW frequencies to allow a maximum number of contacts.

Due to the declining propagation, much effort will go into good antennas on 40, 80, and 160 Meters. Operators of the 3 HF and 1 VHF/satellite stations will be: Reg (VE2AYU), Al (VE2DAV), Fred (VE2SEI), Jeff (VE2TBH), Helen (VE2YAK), Ben (VE3ISN), Al (VO1NO), Lowell (VY2OX) and Vicki (soon to be VE1?).

Time and active frequencies will be as propagation, weather, and operator stamina permit. Helen, VE2YAK will be especially looking for YLs.

Please address QSLs to:

I was going to say use a backhoe. Been there, done that, when we had an addition built. Bent the rod. But I think the following may just work for removal as well. Just disconnect the clamp, using a length of pipe large enough to slip easily over the rod, (1" maybe?) turn the water on and ease the pipe down over the rod. when you get down 8 feet, pull the pipe out and the rod should be loose. It may even come up with the pipe!

Thanks for all the responses to the question! I've taken the darn thing out of the ground, using a pipe wrench, rope, and length of pipe. I had a small wall next to the ground rod, so we tied the rope to the ground rod and the length of pipe, and used the wall as a fulcrum.

One person pushed up on the pipe, and I twisted the ground rod out with the pipe wrench. In all, it took about 30 minutes (a LONG thirty minutes, here in South Florida with 90+ degrees).

Now, what are your suggestions for putting it back _into_ the earth?

The JPS and Timewave units are both very good. They do not, however,
create matter from nothing, leap tall buildings (even in more than one
bound). or dig S1 rare DX out of S9 noise.

Only real way to know if one of these will help your situation is to try
it out ... you can buy an NIR-10 direct from JPS with a 30 day "return
for any reason" guarantee.

I know it's not proper netiquette to follow up one's own post BUT:
IMPORTANT: If you do use a industrial rotary hammer when driving ground
rods, make sure you know where all water lines, gas lines, sewer lines
etc. are located. Hilte's and other industrial rotary hammers will EASILY
drive a steel copper clad ground rod through a sewer line, etc. with very
little effort on the users part.
You can also drive a large number of ground rods in a day and never
break a sweat.

Another thing you forgot to mention is that CW is the only mode that can be transmitted by touching two wires together. Which has been very helpful in emergency situations. I first got interested in the code when I was a 17 year old signalman in the Navy. There is a certain kind of magic to communicating with morse code. AS there was no one I could talk to, in civilian life with flashing light, I became a ham. I like phone also but I would sure miss CW if they did away with it. I understand the Coast Guard just had their last CW communications. That was another reson the ham have always had CW, It made thousands of people that were trained and ready if needed in war time.

Wouldn't this be illegal? (Transmission w/out a licence)

Anyway, I don't think he was looking for real radios. I think he meant that he was looking for a way to have 6-7 people talk back and forth to simluate a QSO or two before they get on the air. I would suggest looking at garage sales for intercom systems. (Baby monitors, that sort of thing.) Just get ones that can go two way, wire 'em up, and away we go.....

> transmission and posting. This could include the comments of
> hams on packet boards

clint.bradford@woodybbs.com (Clint Bradford) writes:

> This ruling has absolutely NO detrimental effect on the great
> majority of BBSs. Unless you tell your Users that ALL of their
> messages are being screened for anything the Sysop might find
> offensive for any reason, this ruling has nothing to do with
> your System.

Clint is correct to point out that it was Prodigy's practive of censoring its newsgroups that led to this decision. But I can see situations in which this decision might also pertain to a packet BBS. Consider third party traffic: the operator of a packet BBS is *supposed* to review all messages passing through his station if it is the point of entry into the packet network for third party traffic.

Lets say that I operate a gateway that makes "rec.radio.amateur.misc" articles available on my packet BBS, and like a dutiful upholder of Part 97 I review each article to make sure it's not obscene, commercial, etc. Let's assume that one of the articles I pass comtains some disparaging remarks about an equipment manufacturer, and that said manufacturer takes umbrage.

In addition to suing the originator of the remarks, can the equipment manufacturer also sue me? By my lay interpretation of Judge Ain's decision, the answer would be yes. Bummer.

In article <DAMw5u.JuL@news.hawaii.edu> jeffrey@math.hawaii.edu writes:

>Nope. Within the last week or two Gary made reference to CW possibily
>damaging the brain (over on r.r.a.policy). That wasn't the first time
>he mentioned this.

>Jeff NH6IL

Well hello there, Jeff. How ya been??

CW and it's relation to brain damage...now THERE'S a subject to
bring me outta the deep background! Perhaps not just CW itself,
but amateur radio as a whole is taken way too seriously by many
of it's advocates.

Perhaps an analogy... Just a month or two ago in the weekly "Electronic
Engineering Times" newspaper, I read an article on the very real possibility
that VR (virtual reality) may cause damage to the neorological signal paths in
the brain. It would appear that when people "live" under a VR helmet for too
long, the "motion" that they "see" is way out of line with what the the inner
ear (balance, coordination) tells one's body is actually happening.

Alternate neurological "paths" are grown inside of one's brain during the VR
experience. Later, while back in the real world, a person's brain can have a
VR relapse of sorts. Those new neurological paths "grown" during the VR
experience can later trigger, and cause your preception of what is actually
occuring at a given instant to be seriously distorted, perhaps resulting in
serious physical injury to yourself or others.

Back in CW land, one's brain is repeatedly trained to become a human modem.
A very machine-like function, way out-of-line from the cognitive, emotional,
artistic and social skills the human brain is best suited for. When all
is said and done, the time spent training a human brain to emulate the
functions of a modem is lost, never to be recovered.

The current ARRL incentive system serves only to prolong and encourage
this twisted way of "communicating". They have, in effect, "put the cart in
front of the horse". The machinations of the communication process take
precedence over the content of the message itself. So much so, that
tradition becomes more important than technical advancement. So much
so, that competency in ONE mode is tested for above all others in every
amateur radio licence class except TECHNICIAN. So much so, that even
the General class theory test is pretty much of a joke.

After too much exposure to CW, one experiences CW flashbacks similar
to the VR experiences above. One tends to line in "CW land", where
Q-code terminology, the pursuit of the simplest methods of communications

and a noise-filled contact only for the sake of another log entry take center-stage to all other concerns. The flashbacks occur even in real life. For example, a fellow ham leaving his callsign and signing out after leaving a message on my home answering machine!! Not as a joke, but simply because such "communication" techniques became THE main mode of discourse for that individual. Even to the exclusion of family members and any real "non-ham" life in general. Soon, divorce became the only option for this radio amateur's wife.

Have you read Clifford Stoll's book, "Silicon Snake Oil"?? It's loaded with humor, widsom and insight on the information highway (internet) and some of it's false promises. I just may write a similar book regarding amateur radio. ;-))

Fire away Jeff! ;-))

Hi, Mike.

The Goddard Space Flight Center ARC re-broadcasts shuttle-ground com. on
the following HF freqs.:

3860 kHz

7185 kHz

14.295 mHz

21.395 mHz

28.650 mHz

A FAQ I read about the club indicated these broadcasts were dependent
upon volunteers' time schedules, flight crew "day" sched., special
events in the flight sched., etc. You may want to inquire locally if
anyone re-transmits NASA Select TV out there. Hope this helps.

I would advise you to obtain a copy of the ARRL Handbook. ARRL, by the
way, stands for the American Radio Relay League. They are HQ'd in
Newington, CT. This publication should answer most of your questions.

KW>NASA:Do you know how put the satellite in space?
>Taxpayer:Of course I do, it was HBO and Turner broadcast. Now goodbye! Click

NASA: Oy Vey! We're just not getting through to these people.

Hi, Keith!

Your sketch is sad, but true. Houston, we have a 'PR'oblem! What NASA needs are a few Info-babes or some better coverage by the mainstream media. NASA's biggest problem is that they do things so well, so organized, so orchestrated, they have made what they do seem too easy to pull off. This doesn't make for a juicy news story, so they (the media) have to dig for "doomsday dirt" to broadcast. I watched an interview with the Atlantis/Mir 18-19 crews and "Mr. Nightline" Ted Koppel. He eluded to the Mir 18 commander that he knew they had a small fire aboard Mir, and asked how they dealt with the problem. The CDR. looked bewildered and replied that he knew nothing about said fire. Ted then said he must have been misinformed, but pressed the CDR. again with "well, If you DID have a fire, what would you do?" This went on for several minutes. No questions about the mission objectives, just questions about worst case scenarios and what to do about them. I wanted to reach into the TV and slap Koppel silly. His line of questioning was ridiculous. It's frustrating to see this go on. I'd love to see someone at NASA to have the gonads to stand up to this kind of

crap, but being militant about a subject/cause will only brand one a zealot, and bring more of the same sensationalist B.S. journalism we've come to expect from the mainstream media.

If I had the resources of a Ross Perot or a Bill Gates, I'd do it myself, with my money, on MY paid-for prime time "News from NASA." (You can bet I'd throw in a few "Info-babes" for good measure. If big boobs can sell anything else, they should be able to sell a space program.)

73 from a "BIG" (6'4" 250#) NASA fan/supporter/advocate/2 STS-QSL's in the bag,

From: rwilkins@ccnet.com
Message-ID: <3tfjut$mb5@ccnet3.ccnet.com>
Source record: 243083

rao@unconfigured.xvnews.domain recently wrote
in <DB9C8F.Fr0@crdnns.crd.ge.com>:

: I am interested in finding some information reg. ham radio,
: exams, licenses etc. Is there any http site on the internet...?
: If so can any of you post that...?

the easiest way is to go to a search site.

try http://www.yahoo.com/

then use the search option to type in amateur radio

you will find over a hundred different amateur radio pages!

several clubs have the rules on their pages as well as pointers to local
classes and examinations. check out http://www.ccnet.com/~rwilkins/

Have Fun!

270. 2m Allmode or 10m w/transverter

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-05 00:00:00 UTC
From: towen@freenet.vcu.edu
Message-ID: <3tfl7i$3va@freenet.vcu.edu>
Source record: 243084

I am interested in 2m, 70cm and up weak signal and satellite. My interests are in a mobile setup, not bulky, expensive base stations. Would I be better off buying a 2m Allmode portable (with transverters for higher bands) or a 10m Allmode portable with a 2m/10m transverter and 2m amp? I am a No Code Tech and therefore have no HF priveleges at this time. Currently my only radio is a RS HTX-202 (2m FM). I have seen 2m Allmode portables for $350-400 used (about double that new).

Any advice on this topic and/or other transverter/amp info would be greatly appreciated.

>: What is ,in your opinion,the fastest and easiest way to learn CW ?

Before one can answer this question, one has to ascertain what speed CW is the goal. Fast and easy methods that work for 5wpm do not work at 13wpm.

Using fast and easy methods to learn 5wpm, I learned it in a couple of hours. Fortunately, I actually used CW as a mode for a year after that, which automatically increased my speed to around 20wpm. IMO, on-the-air contacts are a much more enjoyable way to increase code speed than listening to a computer. After one masters QSB, QRM, and QRN, machine generated audio code is a snap.

Hi,

Does anyone know if Japan shares the same freq. allocations in the 900 MHz band as the U.S. as far as spread specturm digital comm. is concerend? our group will be atteneding a race in Suzuka this August and we'd like to know whether or not the telemetry system in our vehicle (Fluke HYDRA w/wireless modems) will be a source of intereference.

Also, does anyone know where the Japanese 2m business band (kind of like our GMRS) lies? I'd like to know if our voice radios (RS htx-202's) will work there, too.

Thanks,

277. Re: power supply for battery

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-05 00:00:00 UTC
From: wa3afs@aol.com
Message-ID: <3te10e$p9k@newsbf02.news.aol.com>
Source record: 243229

I have both the ICOM IC2SAT and the IC2SRA which i have modified an
alkaline battery pack (BP
90 I think) with a dc plug which can go to a power supply or car lighter.
This way I can operate
the IC2SAT without continually charging the internal battery (and it is
more convenient than having
another wire going into the top of the radio).

I have been volunteered to operate a low band station for a Boy scout summer camp next week.

I would like to know any suggested freq's. nets, etc. for SSB that would be interesting to scouts. I have not been on for over 15 years so any suggestions will be greatly appreciated.

I also need a band chart, is there any where I can download one?

I snatched this off of WD9ESU's packet BBS.......

MSG # TR SIZE TO FROM @BBS DATE TITLE
9254 B$ 1279 CIRCUS K9ZZ ALLUSA 950620 Special Event Station

Special Event Station K9ZZ/Rail Mobile will operate again this year from the Great Circus Train during its two-day journey from Baraboo, Wisconsin's Circus World Museum to Milwaukee for the Great Circus Parade. The station will operate just above the bottem edges of the General Class phone bands on 20 and 40 meters. Conditions will determine which band will be worked. Operation will be from approximately 9 a.m. until 2:30 p.m. on Monday, July 11 and Tuesday, July 12. 1995. The train is composed of five passenger cars and nearly 30 double-length flat cars loaded with colorful circus wagons for the parade on Sunday, July 16. A station was operated on the train last year, but antenna problems produced a very low contact total. We hope to have that problem corrected for this year's run. If you work the station, a 9 x 12 inch SASE with three units of first class postage is required to receive your certificate and other items of interest (photos, etc.) which will be included. If the SASE is not included as specified, we won't be able to respond to your card. Queries may be directed to K9ZZ @ WD9ESU.#SWCI.WI.NOAM. We hope to work at least several hundred QSOs this year, and that you are among them.

*** END OF MSG # 9254 from K9ZZ @ WD9ESU.EN53IE.WI.USA.NOAM

286. Boy Scout Radio merit badge

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-06 00:00:00 UTC
From: abraun@alb.med.itc.com
Message-ID: <95070648742@alb.med.itc.com>
Source record: 242938

I just got back from my son's summer scout camp, and have been given permission to teach a class next summer for the radio merit badge. The format this camp (H. Roe Bartle Scout reservation in Osceola MO) uses is a 1 hour class for either 4 or 8 days, with the option for after-hours activity times. I've reviewed the requirements for the badge and it seems obvious that it will not be possible to complete it in that time frame although the majority of the requirements could be finished.

What I would like to know is if anyone has experience with this badge and, if so, how they approached it, especially in a summer camp setting. I'd appreciate hearing from anyone with any past experience on this subject! If there is interest I can post a summary to the newsgroup. Thanks and 73 de Alan NS0B

Well, a bit of an exaggeration, but I know what you mean. Just attending the AVERAGE, local amateur radio club meeting DOES Illustrate your point, however.

I'm 38, and don't have enough time to devote to the technical aspects of the hobby that interest me. Not unless I also ignore my family and career. I won't do that. Lacking that time and not having found anyone else in the immediate area with similar interests (spread spectrum LANS), I found myself becomming the typical ham. I almost got permanently sucked in...

I'd yack in round-table discussions for hours (while my wife sat lonely in front of the TV set), build simple battery and antenna projects (whoopee!) and basically "hang out" with the rest of the good-old-boys either at morning breakfasts (laced with cholesterol), evening beer parties or swap fests. I even <gasp> started learning CW! Passed the 5 WPM and was up to almost solid copy at 10. But it got worse...

I stopped jogging. My weight shot up and I stopped shaving and bathing. Physical exercise, interpersonal relationships and personal hygiene just kept getting in the way of those important contests. Such things had to be put aside if I were to become a REAL ham. ;-))

I narrowly escaped with my sanity (and body!) intact. Eventually, I pulled the plug entirely and sold all my equipment.

I do have one 2-meter rig left in the car. Comes in handy for NOAA weather. Whenever I feel the urge to get back into the hobby, I just listen to the jamming and horseplay on the local repeaters. Sanity quickly returns and I thus avoid running over to AES (just down the road from home).

Hi, Jim. Try pages 39-42 in the January 1995 QST. Great review of
NVIS and its worth in Amateur Radio emergency communications.

From: Chuck KD9JQ <reichert>
Message-ID: <3tgqh2$96m@newdelph.cig.mot.com>
Source record: 242997

There was also a Sporadic E Opening July 1st ~ 16:30 19:00 GMT
from the Midwest.

I caught 8 Floridas, N1NLX/MM EL-76, and one EL-29. Almost got
CO2OJ in EL-83 but came in too late from doing the lawn...always
a guarantee of a good E opening. He heard me but I couldn't pull
his call out as he was fading. AA9D & AA9DL did work him as
well as others.

FYI I'm in EN52XA

297. Indiana Balloon Launch July 15

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-06 00:00:00 UTC
From: mgarrett@prairienet.org
Message-ID: <3tgudh$6pn@vixen.cso.uiuc.edu>
Source record: 242998

On July 15 at 7 am EST weather permitting, there will be a helium
balloon launch from Veedersburg, Indiana (25 miles east of Danville, Il)
to test the deployment of 3 helium balloons to lift a package aloft with
minimal spinning on the package. The package will contain a Amateur
Television transmitter on 439.250 with horizontal polarity on the antenna
showing two camera views plus a video Id'er with the call of KT9V.
A GPS receiver and packet telemetry software will give position of the
balloon at 1200 baud and other balloon status on 446.000 with the call of
WB9IHS.
Also on board will be a cross band repeater. Input will be on 144.300 FM
with outputs on 444.850 and 52.525 with the call on the repeater of W9DUU.
A HF net on 3.871 KHZ will be hosted by Emmett Dodson, K9YKX to provide
status of preparation, launch and balloon operation during the flight.
This balloon is expected to reach an altitude of 100,000 feet or more and
should have a 440+mile range from the balloon at peak altitude.
All Amateur oerators are encouraged to participate in this flight.

Source record: 243003

Has the vanity call sign program started? I'm kind of surprised to
see a obvious newcomer with a 1x3 callsign. Anyway, in the
tradition of ham radio, let's help the newcomer out:

In article <3tbm09$647@alterdial.UU.NET> Burt Fisher <K1OIK@ccsnet.com> writes:

>I get QSL cards that say "A.R.S. K1OIK", why would anyone write that?
>The post office has N O idea what A.R.S. means.

The post office just pays attention to the address; after all, you did
get the card!

>
>I hear hams say "clear and listening." Why would anybody say that?
>Clear means you are leaving the air, listening means you are staying.
>Which is it?

Clear here means they are stopping *transmitting*. They're letting
others that might want to use the frequency know that they're done.
"Listening" is in case there's somebody else who wants to talk to them.

>
>On repeaters I hear a station call another but when there is no reply,
>the calling station comes back and says "nothing heard." Does the caller
>think we are all deaf and feels a requirement to state the obvious?

Sometimes even experienced operators will manage to do a "bonehead"
mistake like forgetting to set the CTCSS tone, or getting the offset
wrong. This will probably happen to you someday, Burt; don't feel
bad. When it does happen, having the other station say "nothing heard"
will let you know that you didn't hit the repeater.

Keep at it Burt! There's a lot to learn in this hobby, in a few years
you'll be as knowledgable as many who have been in the hobby for
decades.

For accurate and safe information on what you need to do for housepower grounding and bonding, as well as grounding your Ham equipment, refer to the 1993 National Electrical Code published by the National Fire Protection Association (NFPA). This code will be superseded later this year by the 1996 code book. The code is changed every three years, and is used as a national standard by local municipalities. These books are available at electrical suppliers and through many college bookstores. Many local Libraries have them as well.
There are many codes that may apply to your particular situation, but article 250 of the code covers grounding and bonding of power systems while articles in the 800 section cover radio and TV installations.

307. GB2RS News 9th July 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-06 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <805084379snx@llondel.demon.co.uk>
Source record: 243008
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 9th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Last week, there was a major tropospheric opening affecting all bands from VHF to microwaves, with a new UK record being set on 24 GHz. There were also extensive sporadic E openings on 50 and 144MHz.

G4NVD reports that on the 28th of June he worked DG0BBL in Oldenburg on 2 metres, at a distance of 557 kilometres. What makes this interesting is that he was running less than 200 milliwatts of FM.

And from Neil Clarke, G0CAS, who provides the propagation data for GB2RS, come the following reports: G4FVP in County Durham experienced an extensive sporadic E opening on 2 meters to the Mediterranean on the 1st of July. There was also an extensive tropospheric opening which affected all bands from VHF to microwaves, and which lasted for several days. GM0CLN reported GM stations working into the Netherlands on 2.3GHz. In Ipswich, G4DDK heard the 2.3GHz beacon near Amsterdam on the 29th of June. On 24GHz he worked PA0EZ at 2145. The distance was 268 kilometres and this is believed to be a new UK record for that band. PA0EZ, whose QTH is 50 kilometres from the North Sea coast, was running 80 milliwatts and G4DDK was running 125 milliwatts. Congratulations to both stations.

Listeners are reminded that the GR - 'Golf Romeo' - prefix is available for special event stations commemorating the 50th anniversary of VJ-Day next month. GR-prefix callsigns are not a general issue; they are an alternative to GB calls for stations commemorating the 50th anniversary of the end of the Second World War. Anyone wishing to apply for a GR special event station callsign - or if you have already applied for a GB call to commemorate VJ-Day and wish to change it to a GR callsign - should contact Mrs Fiorina Sinapi {pronounced sin-ar-pea} in the Amateur Radio Department at RSGB Headquarters as soon as possible.

A reminder that RSGB Headquarters is open on Saturday, the 15th, from 10am to 4pm. The bookshop, museum, library and GB3RS shack will be available to visitors.

Two metre and 70 centimetre FM newsreaders are required urgently for GB2RS in the Cambridge - Mid-Anglia region. If you would like to volunteer, please contact Ian Kyle, GI8AYZ, as soon as possible. His telephone number is 01846 665034.

This coming Saturday, the 15th of July, is 6 metre FM activity day. A group of amateurs in the north west of England will be trying to keep 6

metres active from at least 0800 until midnight. If you would like to help, call David, G0ODX, or Mike, G3IJE, on 51.530 or 51.550 MHz between 2100 and 2200 BST on Wednesday evening. Alternatively, telephone G0ODX on 01625 582001, or just look out for 6 metre FM activity at any time on Saturday.

The South-East Essex Sixth Form College in Benfleet will be holding an activities week from Monday the 10th until Thursday the 13th of July, and many students will be experiencing amateur radio for the first time. Please look out for the college's club callsign, GX7PRU, on 2 metres and 70 centimetres. They will also be operating Packet and would appreciate as many Packet greetings messages as possible, to which they will reply personally. Messages can be sent to GX7PRU at GB7DUG.

Now news of some special event stations on the air this week:

GB2DTS is on the air from the Dagenham Town Show this weekend, the 8th and 9th of July, on HF, VHF, UHF and Packet.

The Scarborough Special Events Group is on the air as GB5SY this weekend, the 8th and 9th, in order to celebrate the 150th anniversary of the Scarborough to York railway. Four stations are active on HF SSB and CW, 2 metres and 70 centimetres and a souvenir QSL card is available.

The Colchester Amateur Radio Club is operating GB100NT {that's "GB One Hundred NT"} from Flatford Mill this weekend, the 8th and 9th of July, in order to celebrate the 100th anniversary of the National Trust. This is one of a series of events from National Trust locations throughout the country which are planned for the summer months. Next weekend, the 15th and 16th, the Leiston Amateur Radio Club will operate GB100NT from Orford Ness.

GB0TLF is now on the air until the 15th of July to celebrate the Tameside Leisure Festival. The station is being operated by members of the Tameside Amateur Radio Society, the Manchester and District Amateur Radio Society and the Glossop Amateur Radio Society in order to promote leisure activities, including amateur radio.

The Wolverley and District Amateur Radio Society will be running GB5WF during the Wolverley Festival from Friday the 14th until Sunday the 16th of July.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Jersey, PA3GIO, will sign GJ/PA3GIO from Sunday the 9th of July until Friday the 14th. Check these frequencies:- 14282, 14306, 18153, 21318, 24948 and 28495 kHz. He goes on to Guernsey next Sunday, the 16th, and will be QRV for two weeks as GU/PA3GIO.

From Sweden, the Sundsvall {pronounced "Sunds-vahl"} radio club, SK3BG, is signing 8S3BG in order to celebrate their 50th anniversary. The special call will be in use from now until the end of the year.

And from Bermuda, G3AVJ will be operating as G3AVJ/VP9 until Wednesday the 26th of July. Check 14133 kHz, plus or minus QRM, in late afternoon and early evening.

The 2 metre repeater at Brighton, GB3SR, which operates on channel R0, experienced a transmitter failure on the 29th of June. We have not been informed of how long it is likely to be off the air. Further details may be obtained from G8VEH, whose address is correct in the latest RSGB Call Book.

Next the Rally News:

The Sussex Amateur Radio and Computer Fair takes place at Brighton Racecourse today, Sunday the 9th of July. The event starts at 10.30 am and will feature trade stands and a giant bring and buy stall. Talk-in is on 2 metres, channel S22.

Next Sunday, the 16th of July, the RAIBC Romsey Picnic takes place at Broadlands, Romsey, in Hampshire. The event features a junk sale, bring and buy stand, refreshments, and a grand draw. Everyone is welcome, and talk-in is on 2 metres channel S22. Further information may be obtained from John Compton, G4COM, on 01 703 693 017.

Also next Sunday, the 16th, the Norfolk Raynet Barford Rally will be held at the Village Hall, Barford, on the B1108 Norwich to Watton Road. There will be trade stands, a raffle, refreshments etcetera. The doors open at 10.30 am and talk-in will be on 2 metres channel S22.

And the McMichael Rally will also take place on Sunday the 16th at the Haymill Youth and Community Centre, near Burnham Railway Station, on Burnham Lane, Slough. The event features a car boot sale and the doors open at 10.30 am. Talk-in will be on 2 metres channel S22 and further information may be obtained by calling Dave, G3SET, on 01628 486554.

All those intending to visit the Colchester Rally at St Helena School, Sheepen Road, Colchester, on Sunday the 23rd of July, should note that the doors will open at 9.30 am, half-an-hour earlier than the time stated in the Events Diary in RadCom.

Now for the HF contest news:

The IARU HF Championship is taking place this weekend, from 1200 UTC on Saturday until 1200 UTC Sunday, the 9th. Exchange a signal report and the ITU Zone - the UK is in Zone 27. IARU member society official stations will send their society abbreviation. The contest is on all bands from 1.8 to 28 MHz, except the WARC bands. Brief rules are printed on page 20 of the July RadCom.

The RSGB mixed-mode SWL contest runs concurrently with the IARU HF Championship. The rules can be found on page 32 of the June 1995 RadCom.

Next Sunday, the 16th of July, the RSGB Low-Power Field Day will take place. This is a CW-only Portable contest and the full rules can be found in the May 1995 RadCom.

Next some VHF contest news:

The 2nd 50 MHz Backpackers contest is taking place today Sunday, the 9th of July, from 1100 to 1500 UTC. The rules are on page 83 of the April RadCom.

And now the solar factual data:

The period from the 26th of June to the 2nd of July saw solar activity increase to low levels. Geomagnetic conditions were at unsettled levels. There was also a major tropospheric opening with a new UK record on 24 GHz, and sporadic E openings on 50 and 144MHz.

Sunspot numbers increased from 13 on the 27th to 43 by the 1st, with a mean of 28. Solar flux levels also increased from 71 units on the 26th to 79 units by the 1st. The average was 76 units. On the 1st, solar activity increased from very low levels to low levels, when a C9.7/1B solar flare took place. The electron fluence remained at a moderate level throughout the period. The X-Ray flux levels increased from A2.2 units on the 26th to A9.6 units on the 30th, with an average of A5.4 units. The 90-day solar flux average on the 2nd was 76 units, one unit down on last week.

Geomagnetic activity declined from unsettled levels on the 26th, with an Ap index of 21 units, to quiet levels, with an Ap index of 5 units by the 2nd. The average for the period was Ap 11 units. Due to holidays at the British Geological Survey no aa indices have been received from them this week.

The mean R.I. sunspot number for June 1995 was 15.8, with a maximum of 30 on the 5th and the 10th, and a minimum of zero on the 15th and the 16th. The smoothed R.I. sunspot number for December 1994 was 25.6.

I`ll repeat the figures:- spots - 28, flux - 76, Ap index - 11, X-Ray flux - 5.4. The mean R.I. sunspot number for June 1995 was 15.8

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 23rd to the 29th of June, increased from 5.9MHz on the 23rd to 8.3MHz by the 28th, with an average of 6.9MHz. The darkness hour lows averaged 3.2MHz and remained steady throughout. The daytime highs took place between 1800 and 2100 hours every day and the darkness hour lows were between 0300 and 0400 hours.

And lastly the solar forecast.

This week solar activity is expected to be very low as the quiet side of the sun rotates into view. Solar flux levels are expected to decline to the low 70s. Geomagnetic activity is expected to be quiet on most days, but could increase to unsettled levels by next weekend. Ionospheric MUFs during daylight hours are expected to be 19 MHz for the south and 16 MHz for the north. Darkness hour lows are expected to be about 12MHz. Sporadic E can still be expected, with openings on 50MHz particularly.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Foxtrot and G7 Uniform Sierra series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Echo series.

I hear this frequently on repeaters with no tone required. I feel like going back to them and thanking them since I thought my receiver was out since I didn't hear anything either! I really look at all the extra comments as more clutter we don't need on the repeater. You call a station, it doesn't answer, go on to whatever you want to do next. It is somewhat obvious that you did not get an answer - no need to announce it to the world. You don't need to come back and say "clear" either. What are you clear from? You didn't make a contact. Anyone has the right to access the repeater - you don't hold exclusive rights to it forever if you don't say "clear".

What you say is right Milt, but one reason people do it is as
a measure of their courtesy. They believe it is a courteous
way to let anyone else waiting to make a call that they have given
up hope for an answer. Yes, it is unnecessary, but if they didn't
do that, how long before someone else should make a call? 4 seconds?
10 seconds? a minute? I think 8 or 10 seconds is good, but
someone else may think thats not long enough. I have heard
cases where someone makes a call too soon after someone elses
unanswered call, and it ends up in a spat.

If the control ops think that clearing is more of an annoyance
than a courtesy, they can educate the offender on the land line.

I used to announce that I was clear after making an unanswered call,
but in a local club meeting a few months ago, the topic was 2 meter
operating. Each person in the meeting was asked to name the
operating habit that aggrivated them the most. WOW! I don't
think we'll do THAT again!

73, Jeff.

Amateur Operators in the Orange County and surroundings are invited to help man the Ham Radio Booth at the ORANGE COUNTY FAIR!
The event includes free admission into the fair and preferred "Exhibitor Parking". Please sign up in time for postal mail to get your entry tickets and parking passes.
The fair runs July 7th throught the 23rd. If there is not enough time to mail tickets, then they may be picked up in person from me here in Costa Mesa, CAlifornia.

For those without WWW capability you can also get a copy of the petition as follows:

ftp: ftp.warpspeed.com
gopher: gopher.warpspeed.com

>Apples proposal involves taking away One Hundred Fifty MHz of spectrum
>from the Amateur Radio Service at 5.7 GHz and using it for a propriatary
>high power vary wide band data network.
>
>They are not satisfied with the current Part15 sharing of the same spectrum.
>
>Comments are due to the Commission by the tenth of July.
>
My read of the petition doesn't give me the impression that Apple is trying to take away 150 MHz from the amateur service. Their plan is to share that spectrum with hams and Part 15 devices. I also don't think that they plan to allow devices that operate under this new service to use high power. I believe that the power levels would be similar to those used today by Part 15 devices.

317. ICOM 471H: Need Service Info

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-06 00:00:00 UTC
From: dew@gray.cb.att.com
Message-ID: <DB9vK9.D3D@nntpa.cb.att.com>
Source record: 243018
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am trying to troubleshoot a problem with my ICOM
IC-471H and I am in need of someone with a service
manual for this radio. I have the schematic and think
I have isolated the problem down to the PLL board
and in particular the xtal oscillator, 9X multiplier
and amplifier chain of Q1 through Q4. I need to know
if the service manual provides any information about the
signal levels I should see along this chain. Also any
adjustment procedure provided for these stages would be
helpful.

The symptoms I am having is that there is significant
drop off in xmit output power (it is variable, but
sometimes as much as from 70 down to 10 watts) when
tuning through 440.000 to 439.999. I know that the xtals
for the oscillator switch at this frequency and I do see a
minor change in the signal waveform at the output (test
point J4) of the chain when the oscillator switches. I am
suspecting that the gain through the multiplier chain is too
low and this is causing the output to the PLL (IC3)mixer to
be very marginal. It also may be that the xtal for the lower
10MHz is weak. The reason I am suspecting it is more than just
a weak xtal is the the power output even on the upper
10MHz is highly variable both over frequency and over
time.

I would appreciate any help from someone with a service
manual for this radio.

Thanks,
Dave Woolf - K8RSP

Anyone catch the CA to CO/NM/UT sporadic-e (?) opening on July 5? I did; am really excited about it, and just gotta brag.

When I got home from work around 4pm local time, I'd heard a rumor of "unusual" openings on 144.200, so I turned on my 25 watt 2 meter all-mode, and was astounded to hear stations in New Mexico and Colorado. I attempted to call on SSB, with no luck, so I switched over to CW. Working CW/SSB cross-mode, I was able to work two NM and one CO stations, more or less off the side of my fixed beam. Also heard at least one UT station, but could not work it. The opening must have lasted at least 90 minutes.

Over the years I've skimmed the VHF column in QST magazine, and never quite belived the reports of long-haul 2 meter openings, but I do now.

Also, while I support the Codeless Tech license, I hope CW never quite leaves VHF, as I probably could not have made these contacts without it. I also have a three watt Icom 502 six meter SSB/CW QRP rig attached to a vertical, and have been able to work several states. Usually the SSB station can't hear me on voice, but switching over to CW for a brief cross-mode QSO usually works. Yes, I could get an amplifier, but am afraid of the TVI in my apartment hosue.

Long live (VHF) CW and 73 from Leigh/KM6JE in Santa Barbara/DM04.

Source record: 243026
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am strongly considering purchasing this little radio within a month or so, and wanted net reviews before the purchase.

To the best of my knowledge, Standard has been (one of) the best companies to offer "DC to daylight" receive, amazing noise filtering to reject interference, and incredibly rugged construction.

I know the transmit coverage with the stock antenna and tiny output power is only good for local coverage.

How is receive around the broadcast FM band (100 - 108 Mhz)?

Also, how about receive around 200 - 350 Mhz?

Thanks much for any and all reviews.

326. Australian 10m Band Plan

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-06 00:00:00 UTC
From: dave@eram.esi.com.au
Message-ID: <3tfmhl$ojg@eram.esi.com.au>
Source record: 243027
Cross-posted to: rec.radio.info,aus.radio.amateur.misc,rec.radio.amateur.misc

Now that a lot more operators are coming onto 10m FM, it behoves them to acquaint themselves with the Band Plan (unless you want to make an obnoxious dork of yourself, a pastime in which some people apparently revel).

I shall quote from the "Proposed Revised Band Plan" for 10m, dated 4th January, 1995; it is expected to be ratified Real Soon Now (if it has not already). The author appears to be John Martin VK3KWA, Federal Technical Advisory Committee Chairman.

10 Metres

28.0 - 29.7 MHz

28.000 - 28.200 NARROW BAND MODES (Note 2)
28.000 - 28.050 CW only
28.050 - 28.150 FSK (RTTY, Packrt etc)
28.150 - 28.200 CW only
28.190 - 28.200 IBP Beacon Segment (Note 3)

28.200 - 29.000 WIDE BAND MODES (Note 2)
28.200 - 28.300 Existing Beacons
28.680 +- 5 kHz SSTV
28.885 International 6 Metre Liaison Frequency

29.020 - 29.180 DOMESTIC FM SIMPLEX (Note 4)
29.100 Suggested national calling frequency
29.120 VK2WI broadcast frequency (free plug :-)

29.200 - 29.300 WIDE BAND MODES (Note 2)
29.300 - 29.500 AMATEUR SATELLITE DOWNLINKS (Note 5)

29.520 - 29.680 INTERNATIONAL FM SEGMENT (Note 6)
29.520 - 29.580 Repeater Inputs
29.600 Simplex
29.620 - 29.680 Repeater Outputs

Note 1: Band Access
Unrestricted and intermediate licensees may use the entire band. Novices may use CW and SSB only between 28.100 and 28.600 MHz. Limited licensees may use all modes above 29.000 MHz.

Note 2: Modes
"Narrow Band Modes" include CW and digital modes (e.g. RTTY and packet), using FSK and occupying bandwidths up to 1.12 kHz. "Wide Band Modes" include SSB, AM, narrow band FM and other modes with bandwidths up to

6 kHz. FM bandwidths up to 16 kHz (as used on VHF bands) are permitted only above 29 MHz.

Note 3: Beacons
The beacon segments should be kept clear of all other transmissions.

Note 4: FM Simplex
The channel spacing in 20kHz.

Note 5: Amateur Satellites
This segment is used for satellite downlinks and should be kept clear of all other transmissions.

Note 6: International FM Segment
Repeater channel spacing is 20 kHz and the offset is 100 kHz. The simplex channel on 29.600 MHz is used for international simplex operation.

[Inserted for the interest and edification of 10m FM users and others]

>>>rod out of the ground! Can anyone offer suggestions?
>>>
FWIW, would this help get it out?
Take a length of steel rod, say 1 metre or so long, and thread one end to take a nut. fit the other with whatever it takes to attach to the top of your earth stake. Now get a reasonably heavy weight (piece of scrap iron, say, about 5kg), and fit it to slide on that rod. Hook the rod to your earth-stake, thread on the weight, and screw home the nut (better, use 2 lock-nuts).
Now jerk that weight smartly upward against the nut(s), so jerking the earth-stake upward.

Car mechanics have a device that works like this, they call it a "pull hammer".

Next time you hear it check 145.25 or 145.45 for the same activity. You
are hearing a station 21.6 or 21.4 MHz lower due to your 10.8 or 10.7 IF.

166.85 - 21.6 = 145.25 166.85 - 21.4 = 145.45

You will find tuning 21.x or double your IF higher. any local frequency
users will come through. This feature may allow reception of blocked
frequencies. Just tune 21.x MHz higher. This feature only works with a
dual conversion receiver common to scanners. Newer scanners may use
triple conversion or down converters to eliminate these IF images.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I need a couple portables (hand-helds) that can operate in the 151-154 Mhz region. This is a commercial band. The problem is that commercial radios seem to be $400-600 MORE than 2M units and they operate about the same frequency. I understand that many of the handhelds (Yaesu, ICOM, Kenwood, etc) can RECEIVE out of the 2M band, but not transmit. Can some of these be modified to TRANSMIT (with license, of course) in the 154 Mhz region?

What would you advise?

Well . . . {confession time} . . . I've done that. Why? I use to present myself with, "KF0OS listening." Just so someone could call me if needed when on a quiet system. Well, one day when on vacation, I got a reply, "KF0OS this is [insert call here]. I'm at the scene of a three car wreck . . . {lots of information that I was unable to copy going around curves with no place to pull off the road and nothing handy to write on or with in the dark} . . . on I-70 West of . . . well I'm not sure; but, the last mile marker I remember was 235 . . . this is west bound . . . {still looking for a place to stop} . . . in addition to the need for ambulances, the rock slide debris ruptured at least one gas tank and there's fuel all over the . . . {geez, I can't even find my pen to write this guys call with, let alone the critical information} . . . please landline the State Police."

Now, I have to explain that I'm mobile and not in any better position than the other ham is in to provide communication assistance; and, I have to start searching for a base operator or get off the road and copy the info and switch to an autopatch system. It may have been easier to just say, "KF0OS mobile listening." That way the other ham doesn't assume something that may not be true and at the same time - they learn my status. If they've been trying to get anyone and I'm the only one - then I'M IT and I'm glad I'm there. Other than that - the general rule I use is this: if a base operator is available - they should take the distress call; if not, whoever is in the best situation (knowledge of the area, comm systems availablity, etc.) should take it.

This leads me to the center of my soap box. All to often, several mobiles are trying to assist and NONE of them stop to ask if a base operator is monitoring. Now, this is Dumb. {If I'm at home and hear a distress call, I make the telephone call and try to advise the mobiles when they let me have a chance.} Worse still, when I've needed to make a report in a strange city and asked for assistance, I've been told, "You need to switch to [put RPTR Freq. here] to call 911." Which I've done, only to discover that the Rptr is out of range, has a PL, I got the wrong freq or offset, I don't know the autopatch sequence, or whatever.

Please fellow hams, do this in emergencies:

1) Keep the distressed ham or ham relaying the distress on the frequency in use. {If you have them switch - in the excitement, you'll loose them as they're going to go to the wrong freq. or whatever - happens all the time.}

(Aircraft announce to their distress to the controller in an emergency, they don't switch to 121.5! They would have to start all over again explaining who they are, where there at, the nature of the emergency, etc.)

2) Call 911, or whomever, for them; at home (best option), through the current or other rptr (next best), or by relay.

Please announce your status. That way someone doesn't assume something that's not true and cause additional communication confusion (having to sign clear or feeling obligated to respond when a base or another party could better and should handle the call). I'M NOT SAYING "DON'T HELP!"

Sorry Curtis, in summary, I don't believe it's dumb to say something like, "[insert call here] mobile and monitoring." In fact, it may be dumb to NOT do it.

I guess I'm not done. Why "Landline"? Why not call it the "telephone" like everyone else? I especially take exception to almost coded phrases like, "Please wait, I've got a Lima Lima on the {especially replicate phrase with no additional meaning next} twisted pair."

Respectfully submitted,
Walt

What exactly is wrong with this? Apparently "CQ" is frowned on as
an even bigger gaffe than "breaker 19" on most FM repeaters.

"WA6FWI mobile and monitoring" states a pretty obvious request. If
there is anyone else out there, who would appreciate a random chat
while I motor on down the highway, please feel free to respond.

If you want ot complain about insipid comments on FM, how about
something truely insipid such as "destinated" or the excessive
use of the word "we" when they really mean "I". With the excessive
use of "we" sometimes it sounds like a "We the living" by Ayn Rand.

SB PROP @ ARL $ARLP029
ARLP029 Propagation de KT7H

ZCZC AP97
QST de W1AW
Propagation Forecast Bulletin 29 ARLP029
From Tad Cook, KT7H
Seattle, WA July 7, 1995
To all radio amateurs

SB PROP ARL ARLP029
ARLP029 Propagation de KT7H

Solar flux is rising gradually in the short term. The average flux last week was about 7 points higher than for the week previous. A week as reported in this bulletin runs from Thursday through Wednesday. The bulletin is written on Thursday, and it is released on Friday.

Geomagnetic conditions have been very quiet and stable, although there was an upset on July 1 with the K index rising as high as four. Conditions are expected to remain stable until July 16 and 17, when we could see a somewhat disturbed period, and again around July 23 as well. July 30 could produce some very disturbed conditions with K indices of five and A index around 30. Solar flux is currently rising, and may peak at 90 around July 16 through 18. Flux values should reach minimum again at the end of the month.

Sunspot Numbers for June 29 through July 5 were 38, 45, 43, 41, 20, 32 and 32, with a mean of 35.9. 10.7 cm flux was 77.5, 78.1, 78.8, 77.7, 78.1, 80.8 and 80.2, with a mean of 78.7.

The path prediction for this week is from the center of the continental United States to Bolivia.

80 meters should be open from 0130 to 1030z, 40 meters from 0100 to 1100 and 30 meters from 2330 to 1200. Check 20 meters from 2100 to 0400, and expect less stable conditions until 0800, with another opening from 1100 to 1400. 17 meters should be open on most days from 1800 to 0300, with signals increasing during that period. 15 meters does not look promising at this time, but your best bet is around 0200 to 0300. Although unlikely, the best chance of a 10 or 12 meter opening is over that same period.

Everyone can at least tell if they keyed up the repeater. No one is that
stupid.

```
ENJOY IRELAND - QRP - AND DUBLIN
INTERNATIONAL QRP WEEK : MARINO INSTITUTE OF EDUCATION, DUBLIN
MONDAY 28th AUGUST to SATURDAY 2nd SEPTEMBER

Two Major Presentations By G3RJV (Repeated beginning and end of week)
Practical Electronics and Engineering Laboratory Workshops
Fully Operational QRP Station (EI3RJV) Social and Hospitality Evenings

The Marino Institute is set in Peaceful Parkland
close to Dublin Airport and City Centre.
It provide comfortable single and twin accommodation an full catering.
The courtyard gardens and extensive grounds offer rest and recreation.
Major Tourist and Scenic Attractions are within easy reach.
The programme include ample free time for exploring the local area or even
travelling further afield.

Cost:

Bed, Breakfast, 4 course Lunch, Coffee/Tea Breaks plus all activities
28 pounds (Sterling or Irish) per day per person
The Whole Week : Monday Morning - Saturday Lunchtime (5 nights)
125 pounds per person (additional Sunday - 27th - night : 10 pounds/person)
Further Details/Application Form:
Gerardine Quinn, Marino Institute of education, Griffith Ave. Dublin 9.

355. Re: Technician vs. Technician NoCode??

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-07 00:00:00 UTC
From: dmorgan@uoguelph.ca
Message-ID: <3tjqaf$ktm@ccshst05.cs.uoguelph.ca>
Source record: 242906

Drew Loker (dd650@cleveland.Freenet.Edu) wrote:
: I just downloaded the ASCII text version of the Technician test, but it
: appears to be the older version. Is there an updated version? Or is this
: version that I have still applicable, just no code?

I THINK the tests changed recently -- July 1st or something, so it may
not be the most up to date question pool. Some of the questions will be
the same, tohers will be diferent.

: PS. Is your opnion, is it easier to learn to read 5 WPM in morse and take
: the Novice test? Or try to learn all those electronics? I am trying to get
: my wife licensed also, and I am not sure she knows even what a wave-lenght
: or a resistor is.

It is entirely possible to not know a thing about the theory and yet ace
the tests.

To get a Technician licence [which is no-code], you must pass both the
Novice and the Tech written exams. I did this this past January, and
this is what I did:

My husband bought me a Tech study book from Radio Shack [they are not
available in Canada, and I took the test in the US, where he is]. I
don't rememerb what the title it, but it is basically "everything you
need to know to get your no-code licence"; it had the complete Novice and
Tech question pools, with answers, and with some basic explanations of
the answers.

I had 3.5 weeks in the US for my XMas holidays, whihc gave me 3 available
test dates. The first was 3 days after my arrival and so was not
practical to aim for. I chose the second test date as my target.

Due to time constraints and such, by the time the test time itself
arrived I had studied for the novice test for all of about 1 hour [I only
got through about 1/2 the question pool] -- studying consisting of
reading the question, reading the available answers, guessing what *I*
htought was the right answer, and then reading the explanation of why I
was right or wrong. I learned the rules [I had actualy read thru the
rules before, so maybe I had studied for 70 minutes or so ;)], but no
real theory...

I paid my $, went in and wrote the Novice test. I figured there was
absolutely no way I could pass... Well, I did. :) So, I asked if I
could go out in the hall, study for the tech test, then come back into
the room and write the tech test. They said yes.

I took the book and read the question pool for the Tech test; I spent 1.5 hours, *jusT* got through the entire pool, when they said I had to come in and write it because the testing session was almost over.

I went in, wrote the test, and passed with flying colours.

SO, I got my no-code with about 2.5 hours of studying.... I know the rules, but I don't really know the theory [and I have yet to find anyone willing or able to answer all or even most of my "why" questions, including my physics professors, so I have given up on learning the theory; yes, I have taken two years of high school physics plus a year of University physics; doesn't mean I really UNDERSTAND anything, though I could probably recite formulas to you and maybe even tell you how some of them are used to solve a word problem (although since it has been several years since I did physics, I don't rememebr most of the formulas)].

Having looked at the question pools, the General, Advanced and Extra written exams will be just as easy...

So, it is entirely possible to not understand a word of the exams and still pass. As I said to my husband, if the questions were all gibberish, and I had a question pool to study from, I could pass a gibberish exam, too...

Would I like to actually UNDERSTAND the theory??? YES. Have I found anyone competant to EXPLAIN it such that I *DO* *understand* it? Nope. Let's put it this way: I start with "how do you know that the cloud-chamber experiment actually measures the charge of an electron" and kind of go from there...

So, right now, I know the FCC rules, but almost no theory. What theory I DO know I don't understand, but I can recite it to you such that one may verry well think I understand it.

Right now I am struggling to learn code, and have decided that I am skipping 5 wpm and will either go for 13 or for 20....

Maybe eventually I will learn the theory, too....

DC.

Newsgroups: rec.radio.amateur.misc
Subject: Hams Needed for Emergeny Communications at Equestrian Event
Date: Thu, 06 Jul 1995 21:14:32 -0700 (PDT)
Organization: South_Valley_Internet
Message-ID: <3tif28$bas@garlic.com>

If you know of any ham radio operators available to assist in
providing emergency communications on July 22, 1995 in Santa Cruz (CA)
for the Santa Cruz County Horsemen's Association annual Fireworks
Fifty Endurance Ride, please have them contact me.

This will be a nice day in the Redwoods of Santa Cruz (CA), passing
traffic and providing emergency communication for this non-profit
organization. Meals will be provided.

Thank you very much!

359. Old HyGain antenna: help !

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-07 00:00:00 UTC
From: ahewett@mround.bt.co.uk
Message-ID: <3tivsn$ns@pheidippides.axion.bt.co.uk>
Source record: 242941
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

I have acquired an old HyGain Vertical with sections for 10, 15 and 20m.

It's in three sections and looks as if there is a top section missing.

Can anyone with one of these antennas help me out ? Here's the list of
part numbers:

10m section - assembly number: 870138
15m section - assembly number: 870155
20m section - assembly number: 850169 (may be wrong - label a bit faded !)

Made by HyGain Electrical Corp, Nebraska, USA.

Any information about the correct assembly of said vertical, or about
the configuration of the missing top section would be greatly appreciated.

TIA,

Andy G8PYG

360. How is your coordinator doing?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-07 00:00:00 UTC
From: otterson@mindspring.com
Message-ID: <3thuq1$mh2@news.mindspring.com>
Source record: 242942

After seeing the posts about SCRBBA being non-responsive, and considering the dealings I and others have had with our local coordinating body, I thought I would start this thread to inquire what others think of their coordinators. No name calling please; just the facts maam.

I'll start the fun by mentioning SERA, the South Eastern Repeater Association. Like the name says, the focus is on repeaters, and little attention is given to spectrum management issues outside of repeater coordination. SERA has recently become somewhat more active in spectrum management with a new 70cm bandplan that acknowleges packet and ATV (finally), but until last year there was no plan for anything other than FM repeaters.

SERA has a quarterly magazine that lists all the repeaters they know about, regarless of coordination status. There are articles as well, that are ocasionally related to repeaters and/or spectrum management, but often are not.

SERA has a director for each state, who is essentially the coordinator for all bands. (SERA coordinates FL, GA, SC, NC, TN, and a few other states...) It has been my experience that SERA is unresponsive, at best. Once a year a repeater datasheet is mailed to all trustees of record, if not returned then the repeater loses coordination status. As far as I can tell, no field checking of repeater operational status is done; there are many "paper" repeaters on the 70cm band.

I have supported SERA for two years with dues of $20/year (since I moved to the region) but I don't expect to continue to pay these dues considering what I see as a poor level of service. Admittedly, SERA is staffed by elected volunteers, but I believe that if you are going to volunteer for a service position, you owe service.

Feel free to join in the fray. I'm wearing asbestos.

Subject: Commercial Radio Exams * 8 July * Cambridge MA

Summary: MROP GROL GMDSS Radar + Radio Telegrapgh Operator exams
** May be last chance befor exams are revised SOON **
** Dispite the previous warnings The FCC is slow and has not
YET issued the revised question pool......

Keywords: Radio Exams Commercial GROL GMDSS MROP T2 Radar

Commercial Radio Exams at Hosstraders

** MROP, GROL, GMDSS, Radar and Telegraph exams in Rochester NH **

** Sat. July 8th 1995 **

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 77 Mass Ave, Cambridge MA in
MIT's room 1-150 at 10 AM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

This may be your last chance to take aquire a commercial license
before the exams are revised SOON. It is rumored the GROL will
be made much more difficult.

Our next commercial exam session will be held at 10AM on
Saturday September 9th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For all licenses except the GROL
there is an additional $35 regulatory fee, you must attach a check
made to the FCC to your successful application. For the
Telegraph exams bring 2 passport style photos in an envelope to
attach to your application.

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat lifetime

licenses. !!!

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard ships carrying passengers
for hire and certain aviation and coast stations. Large ocean
going ships will be required to carry two Global Maritime Distress
and Safety Systems - operator licenses. A GMDSS Maintainer License
is required to service GMDSS equipment. A Radiotelegraph
Operators Certificate is required to be a radio officer aboard
certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in
obtaining a commercial telegraph license as they will receive
credit for the required class code exam. Bring your original
amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the
National Radio Examiners COLEM, part of the W5YI group.

Here's the secret to getting your 5WPM down in 5 Days flat.

Plan a camping trip to somewhere like, oh, say Maine. Also check weather forecasts that say "Sunny weather all week."

I got my 5WPM code because I spent five out of ten days in a tent during horrible rainstorms. Luckily I'd brought along some good reading, had electrical hookups, and old Gordo's tapes and some paper and a few pencils.

As there wasn't much else to do I learned "The Code".

73,
Tony

ZCZC AE13
QST de W1AW
DX Bulletin 37 ARLD037
From ARRL Headquarters
Newington CT July 6, 1995
To all radio amateurs

SB DX ARL ARLD037
ARLD037 DX news

This week's bulletin was made possible with information provided by Lanny, W5BOS, Marios, 5B4WN, Rick, N6NR, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

WEST KIRIBATI, T30. Dave, T30DW, has been worked on 14208 kHz around 1200z. He should be active for the next two years. QSL via PO Box 29, Bairiki, Tarawa, Republic of Kiribati.

SOUTH SHETLANDS, VP8. Listen for Andy, VP8CQS, on 40 meter CW and SSB. Europeans report hearing him with a good signal on 7004 kHz CW around 2100z and on 7050 kHz SSB around 2145z. QSL via DL1EHH.

BURKINA FASO, XT. Ed, XT2CH, has been on 14160 kHz around 1945z. QSL via XT2CH - Ed, c/o American Embassy Burkina Faso, Department of State, Washington, DC 20521-2440.

ETHIOPIA, ET. ET3AA, has been on 14224 kHz starting at 0200z. QSL via PO Box 60258, Addis Ababa, Ethiopia. ET3YU has been on the low end of 20 meters running stations on CW starting around 2230z. QSL via YU1FW.

KENYA and UGANDA, 5Z and 5X. Paul, 5Z4FO, is active and plans to remain so from Uganda as 5X1WM. He should be leaving Kenya some time this month. QSL via KB4EKY.

CHINA. Rick, N6NR, will be operating during July from Beijing signing BY1QH and N6NR/BY1, and possibly BY1PK. Rick will focus on HF CW, primarily 40, 30, 20 and 17 meters, and on OSCAR 13 on 145.890 MHz.

ANGOLA, D2. Peter, ON6TT, will use either D2TT or D3T from July 7 to August 28. He plans to be on all bands, with special interest in

the WARC and low bands, and RTTY. Peter will be in the IARU contest this weekend. He also plans to have beacons on 160 and 10 meters. During his daytime work hours, check 28203 kHz. During his sleep hours, check 1821.5 kHz. Beacon signal reports can be sent to ifrclad at angonet.gn.apc.org, his Internet address. Note his name clearly in the message body. Please do not use his Internet connection for skeds or uses other than beacon reports. QSL via ON5NT.

TRINDADE, PY0. Sergio, PU1LOK, is active as PU0TRI only on 80 and 10 meter SSB. He will be on the island until October and will then start QSL chores.

DODECANESE, SV5. Ralf, DL9GTI, will be on from Rhodes Island, EU-001, until July 19 as SV5/DL9GTI/p. He will operate a QRP station running 5 watts to verticals and long wires on 40 to 10 meters. Listen for him in the IARU and the AGCW QRP Summer Contests. QSL via his home call.

IOTA TIPS. POPOF ISLAND, KL0. Lanny, W5BOS, will activate Popof Island, NA-087, from 2200z July 12 to 2300z July 15. He will operate CW and SSB. Popof is part of the Shumagin Island group. QSL via W5BOS.

GREEN ISLAND, BV9G. Operators from CTARL, including BV8YA, BV8YB, BV8AB and BV8BC, will sign BV0ARL/BV9G July 20 to 25. QSL via BV8BC and/or CTARL Bureau, PO Box 73, Taipei 100, Taiwan, R.O.C.

CULATRA ISLAND, CT1. The Northern Portugal DX Group, NPDXG, and Radio Clube de Loule, RCL, will operate a multi/single effort in the 1995 IOTA Contest, July 29 and 30, from EU-145 in the Algarve Province Group. They plan to have a station on the air a few days before the contest on all bands and modes, including satellites. They have requested the call CQ2C. Europeans QSL via CT1EEB. North Americans QSL via WA1ECA.

BANKS AND HERSCHEL ISLANDS. Frederick, VE3VRO, will be active July 10 to 13 from Banks, NA-129, and July 14 to 17 between 0000 and 0300Z from Herschel, NA-193. Listen for VE3VRO/KL0. Banks is in the Arctic Archipelago Islands Group and Herschel is in the Yukon Territory Group.

GEORGIOS ISLAND. From July 10 to 13, operators 5B4WN, KH, AFM and 8AH will operate 80 through 10 meter CW and SSB from AS-120, signing C4AG/P. QSL via 5B4AFM or 5B4KH CBA.

WHAT'S THE FREQUENCY, KENNETH? From time to time we mention to check the usual IOTA frequencies. General gathering spots for Island Hunters are 3530, 7030, 10114, 14040, 18098, 21040, 24920 and 28040 kHz for CW. On SSB try 3765, 7155, 14260, 18128, 21260, 24950 and 28560 kHz. The IOTA Net is at 1300z Saturdays on 14260 kHz and at the same time Sundays on 21260 kHz.

THIS WEEKEND ON THE RADIO. The IARU HF World Championship starts at 1200z July 8 and runs for 24 hours. Exchange signal report and ITU Zone. IARU member society HQ stations will send signal report and official IARU member society abbreviation. For complete rules, see page 110 in April QST.

The CQ World Wide VHF Contest and QRP ARCI Summer Homebrew Sprint are both this weekend as well. For more information check page 113 in June QST.

365. ECPA of 1986

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-07 00:00:00 UTC
From: tom.miller@oho.com
Message-ID: <9507070112094437@oho.com>
Source record: 242947

I am posting in this here only after repeated emailing to the White House as well as my congressman's local office with no luck whatsoever. I explained that I do not have at this time the capabilities to browse web sites. I only have email & limited Usenet Forum capability. Even now, I don't have the chance to read this group very often.
I am trying to get ahold of a copy of the ECPA of 1986 as well as the amendments to it that President Clinton signed into law not too long ago that made it a federal offense to listen to cellular as well as cordless telephone calls with scanner radios. From the White House they tell me to browse certain Web Sites. This is after I've repeatedly told them that I do not have the capability for Web browsing. From my congressman, I get water reports, so you see where I'm left. I'll appreciate any assistance in obtaining this info. Please email any replies.
73's,
Tom Miller

I'm on the fence about going for the call of my long SK uncle, W2JFY. He introduced me to Ham Radio but passed away before I got licensed. Years later I got licensed, and recently moved to 6-land. When I moved I retired my 1-call because I think having an out-of-area call causes uneeded confusion, especially when DXing.

So my delema : I'd love to have my uncle call because, well you know, he taught me so much and introduced me to this life long obsession with radio, BUT, signing W2JFY/6 is bad enough on phone, and really rotten on cw, especially with my lame fist.

What to do, what to do???

de KN6BX (also not a great cw call)

[re "Nothing heard"]
|I hear this frequently on repeaters with no tone required. I feel like going
|back to them and thanking them since I thought my receiver was out since I
|didn't hear anything either! I really look at all the extra comments as more
|clutter we don't need on the repeater. You call a station, it doesn't answer,
|go on to whatever you want to do next. It is somewhat obvious that you did
|not get an answer - no need to announce it to the world.

If I have asked for a break in someone else's conversation to make a
call, "nothing heard" can be used as a way to say to the nice people
that you're giving up and they can get back to their conversation.
Actually, my form would be, "Nothing heard, thanks for the break,
KD1ON clear." Actually, I guess I'd do that without the "nothing
heard" as well. :-)

Looking for anyone who knows about any problems associated with the following radios.

Kenwood TH-79A Deluxe HP

Yeasu FT-51R HP

Yeasu FT-530

Standard C5508A

If anyone owns one of the above a quick note on your experience would be great. Also if your experienced in Hand Held Tx'ers I would appreciate a recommendation for a dual band.

Ever seen those tractor pull TV commericals...you know, the ones
that start "50,000 tons of nitrous burning traction action...THissss
SSSAturday.....(echo echo echo). Anyway, you might want to borrow
one of those monster trucks to pull that ground rod outta there (especially
if it is one of the 10 foot variety. Best not use your car tailgate else you'll
have a heafty repair bill to re-attach the bumper.

^^
any particular reason for the recommendation?

If the yatch has normal HF eqpt just use that, much better, except you'll
have to check to see if it allows LSB, due to the old quirky tradition in
amateur circles :-)

> I would be grateful for any info/opinions on this and advice from
>anyone who has experience in maintaining communications with a boat
>travelling from the Mediterranean via the Red Sea and across the Indian Ocean.

err, yes, but not with amateur radio.

Questions-

How big is the yacht?
How many crew?
How many amateurs?
How many experienced hf operators (professional or amateur?)
What sort of antennae are fitted on the yacht?

Gordy

This frequency should be in the Federal Agency band (I don't have specifics).
I suspect you're hearing a repeater very close by that is blasting the front
end of your scanner - try subtracting the first or second IF frequency of
your scanner from 166.85 and you may find the actual freq. The amateur
2-meter repeater sub-band is from 145.11 to 145.49 and from 146.61 to
147.39. Fixes to this would include an attenuator or a lesser antenna or
possibly a re-oriented antenna.

Hope this helps a bit.

The clue may be the word "scanner"

Most scanners are pretty poor receivers with, amongst other failings,
very poor image suppression. If your scanner is using single conversion
to a 10.7 MHz IF, the image will be 21.4 MHz away from the tuned
frequency.

166.85 minus 21.4 = 145.450 MHz which is in the 2 metre band.

Guesswork, so far, but you can check it by trying 145.450 when you
find the repeater on 166.85

It is, of course, possible that it could be a transmitted image from
a faulty repeater. The repeater would have to have a superhet
transmitter with a 10.7 IF, and would have to have poor output
filtering, and the cavity diplexer would have to have inadequate loss at
166.85 not impossible and stranger things have been known....

Hope this helps,
David GM4ZNX

Looks like you are hearing an image of a repeater on 145.45. This is common
with double-conversion scanners.

166.85 - (2 * 10.7) = 145.45

Where 10.7 MHz (or perhaps 21.4) is your scanner's IF frequency.

>designed specifically for driving ground rods. Greatest thing since
>sliced bread for driving ground rods.

You don't need to go so high-tech.

1) Go to the local hardware or home supply store (Lowe's, HQ, etc. around these parts) and get a 4' length of heavy steel plumbing pipe with threading on at least one end. Buy a few threaded metal caps to fit the end of the pipe. Buy a 2' section of pipe if you're going to drive 4' ground rods.

2) Thread a cap on the end of the pipe. Tighten with a pipe wrench.

3) Slide the pipe over the top of the ground rod. Stand the rod and pipe up at the place you want the rod driven.

4) Grab the pipe, slide it up as high as you can, and start pounding. Be amazed at how well it works.

5) When the rod is halfway in and the pipe hits the ground, remove the pipe and finish off the job with a sledge hammer (or you might try the 2' pipe at this point, if you bought one). A block of hard wood with an indentation in the middle of one side might make hammering easier.

6) Replace the threaded cap, which is probably cracked and about to break.

You can have a thick steel disk welded to the end of the pipe so you won't have to keep replacing the screw-on caps.

Probably 166.85 - 2 * 10.7 (IF) = 145.45 which is a repeater output.

Scanner's have notoriously poor front ends!

Chuck

As far as I know there isn't. The ARRL repeater directory can only be
assembled by signing a non-disclosure statement with the repeater
co-ordinators, most of who feel proprietary about the location and
frequency of their repeaters. I asked the ARRL if I could get their
data base for a program I'm writing and this is the story I heard.

All seems very strange to me.

Source record: 242972

I recently passed the 20 WPM code test, and here's my two cents worth:

- Get a copy of Morse Academy or a similar package and copy random code letters only, and then numbers only, and then both at 25 WPM.

- Don't worry about the prosigns, except / . BT , as they are the only ones that will appear in the text. AR & BK appear at the end.

- Get a copy of Jerry Ziliac's 35 WPM Code Word tapes. They teach common words and are very good. Listen to these in your car on the way to work.

- Using Morse Academy take the sample tests again and again and again...

- Take the real test until you pass. I would recommend taking the same tests, either ARRL or W5YI, as each has its own style. The Morse Academy tests are best for ARRL.

I started to learn code in Nov of 1994, passed 13WPM in January, and 20WPM in June. You just have to work at it.

My own experience was that I seemed to get stuck at around 17-18 WPM. I sent wife and the kids to Grandmas for a weekend, and spent two days listening to computer generated code, taking tests and working CW on the air.

The next Saturday I passed easily.. 8 out of 10, fill in the blank.

Good luck, it can be done. It just requires work.

Paul: You are correct but the switch is set up such that
switch no. 1 is the binary one ie 1000000
switch no. 2 is the binary two ie 0100000
switch no. 3 is the binary four ie 0010000
switch no. 7 is usually off. it parallels the on off switch on the
top deck. (now you only need to carry a list of the pl tones
so you know what number in the list to enter.)

Well, we also live nestled amongst several oak trees which are even taller, if that helps.

What I don't know is if being underground means that there are ample opportunities for a strike to dissipate (it is underGROUND, after all), or if that just means that I have a long inaccessable conduit to a unknown lightning source. I suppose that, being centralized, it is possible for the power company to provide effective lightning protection prior to the cables going under ground, and once there, they are pretty safe. I have no idea if this is done, however. Anybody know?

402. CB AM/FM radio antenna box = Random wire antenna tuner?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-07 00:00:00 UTC
From: mam@cbnews.cb.att.com
Message-ID: <DBD3F1.8p7@nntpa.cb.att.com>
Source record: 242984

OK. So I picked up this CB at a garage sale (it's for my kids)
and it had this cute little box which allows you to degrad the
performance of your AM/FM radio by using the built in car antenna as
a dual AM/FM/CB antenna. Opps, I meant allow dual utilization.

This little box, with an adjusting knob on the front to 'tune'
the antenna for optimal CB performance: How close to a random
wire antenna-tuner is this? I reckon it should work for 10 meters,
but how about 30, 40 or 80?

I'd like to use the box as part of my QRP station, as a random-wire tuner.
If it works, I'd take it and the QRP setup 'in the field' like at Scout Camp.

I'll probably go scope it with my MFJ SWR Analyzer, but would appreciate
any comments on how successful I'm likely to be.

The Conch Republic Amateur Radio Club has the pleasure to
announce that we have finally got our repeater on the air!

(insert cheering crowd noise here)

It is on: 146.655(-) call: N7CJE

The repeater is at mile marker 99 in Key Largo, FL. It is
located at the Key Largo Vol. Fire Dept. station. The system has
911 and full autopatch functions.

Thanks to all who have helped to get this long involved project
up and running. So, when visiting the Keys, give us a call on
the
N7CJE/Rpt.
73,
Randy Williams-N7CJE

408. Band openings on Saturday, 7/1/95!!??

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: jahern@uoknor.edu
Message-ID: <3tmul9$oc9@romulus.ucs.uoknor.edu>
Source record: 242790

Did anyone else experienced what I did on Saturday,
July 1, 1995, or if they noticed unusual band openings at this
time:

I was driving in the Oklahoma panhandle around 1:30 pm CDT and
thought I'd try to find an FM station (broadcast band, that is) to
listen to. This is usually difficult in these parts, since I was
a long way from anywhere (I was east of Guymon, OK, if that helps).
Lo and behold, there was a strong FM station on EVERY spot on the
dial (i.e., every 200 kHz). In fact most of the frequencies had
2 or more stations "doubling." All of these stations were from the
southeast: Florida, Georgia, Alabama. This band opening lasted
at least a couple of hours.

I scanned the 2 meter band with my HT and mag-mount antenna, hoping
it might be open, but 2m was pretty quiet. Giving a CQ (no, I don't
normally do this!) on 146.52 simplex didn't raise anybody.

I've never heard of such a band opening on FM like this!
Did anyone notice anything unusual on 6m or below?

And this from the "person" who claimed OTHER hams were unfeeling.

Burt, this is the most cold and heartless posting I have ever
had the displeasure of seeing come across the net. To attack someone
who has suffered and now must leave his job due to health. And in his
last comments, leave a heartfelt thanks to the PEOPLE he has worked
with.

You sir, are not worth any more of my time, and I consider
your worthless dribble to no longer be a plea for attention, but
garbage that will simply be put in its proper place before it
even comes into my machine.

YOU REALLY NEED A LIFE. Get off your butt, turn off your computer,
and take a walk outside. There is more to life than YOUR sophmoric
little tries at wit, and constant pleas for attention.

<Author Kill File include Burt Fisher>

To all others out there, have pity on this poor lifeless lump of
flesh that has insisted on posting here. He apparently cannot get
satisfaction in his own home, like the rest of us.

Lesson learned from Field Day experience: If you've got one of the old post-type car bumper jacks, use it and a piece of heavy chain. If you can't loop the chain around your ground rod connection, use a heavy vice-grip pliers to give you an anchor point (it's likely you can't get the hook of the jack itself close enough to the ground clamp for it to hook directly. Take your time and run the garden hose down the hole a bit to loosen things up.

When it's on emergency power, our local repeater's owner usually
switches off the squelch tail - cuts it to 0 seconds (it's usually
on 15-20 seconds, another story). It's pretty hard to tell if
you've keyed up the repeater if there's no tail.

> Police."

What came after this was Walter talking about how he was unable to
copy the information because the other operator had just spilled
out everything at once and Walter just couldn't get it all while he was
driving. I'll comment on this in another post.

My point should have have been clear here, but I wanted to see if
any one would get it on their own. What I find wrong with the
..mobile and monitoring" call is the use of the word "AND". It is
reaaly not a big deal, but it makes it sound as if the operator is
telling you what he is doing....

"KD6ELA" is the identity of my station (it does not necessarily mean
that I am the operator of the station).

"Mobile" in my book means I am a mobile station as opposed to a
permanant or portable station. If I am walking down the street
talking on my hand held, I am a "mobile". I consider "mobile"
to be part of my call sign, not an announcement that I am driving
a car.

"Monitoring" means that is what I am doing. I am monitoring the
frequency.

The use of "mobile AND monitoring" tells me that the operator is using the term "mobile" to describe what he is doing, not what type of station he is operating. It really isn't a big deal - something I have observed.

If I am in my car and I am parked on the side of the road, I still call myself "KD6ELA mobile" because I am a mobile station. I would expect someone that uses the phrase "...mobile AND monitoring" to say something like "...PARKED AND monitoring" in similar circumstances.

So- what I would say is "KD6ELA mobile. Monitoring." Or maybe "KD6ELA mobile is monitoring."

Does this make sense? Does to me. Does it matter to anyone? Probably not. It was just a thought that went along with whatever the thread was (though right now I don't even remember what the previous post said).

Walter brings up another problem with operators that really don't know how to send emergency traffic.

> Walt

Walt: You have experienced what I consider a classic problem with ham operators, they don't know how to request help by radio during an emergency. They don't know when to shut up and listen. What they end up doing is wasting their breath telling you everything when you can't help at the moment.

I hear this on autopatch calls to "911" (or whatever) dispatchers all the time. The dispatcher answers (maybe in another county) and ham proceeds to spill out a big speech about who he is, he's on an amateur radio patch, there's been a big wreck, where it is, all of landmarks, send an ambulance, what lane he's in, etc., etc. Only to find out that the dispatcher needs to transfer him to another agency - where he will start the whole speech over again when the next person answers.

I wrote an article for a club newsletter on this subject once and got a lot of positive response from members that thought it made sense. The guidelines I spelled out were primarily for emergency autopatch calls but can be applied to any radio call for help.

When a dispatcher (or whoever) answers the phone make sure you have ESTABLISHED two way communication with the before you give any other information. Something like, "Sir. I am calling on a radio patch. Can you hear me clearly? Over." And get a grip on yourself - it seems like people's voices go up one octave and 6 dB when they make a real emergency call - then they might start "talking off" the repeater.

Once you have established two way communications, tell them what you need to report BRIEFLY. "There has been a car accident in East Bunganuts. Over." Then let them ask you questions and give them

brief, to the point answers. They know what to ask.

The same type of guidelines would apply if you are calling another station. Call them first and get an acknowledgment that they can at least hear you. Tell them you have an emergency and ask if they can contact the proper authorities. Then tell them the basic scenerio without going into a bunch of little details.

Congrats on your long distance 2 meter contacts, Charles. During the period that I made the contacts into CO and NM on 2 meters, 6 meters was also wide open, with a few weak "2" land stations, in addition to strong "0"-land stations. Were you able to check six meters during the time of your two meter opening?

>many of the handhelds (Yaesu, ICOM, Kenwood, etc) can RECEIVE out of the 2M band,
>but not transmit. Can some of these be modified to TRANSMIT (with license, of course)
>in the 154 Mhz region?

>What would you advise?

Yes, these radios can be modified to transmit in the 151-154 range,
however, you must understand that they are not FCC Type Accepted for
transmit in that range. That is why the commercial radios are so much
more, the manufactures spend a lot of money to get through the type
acceptance. So, the answer to your question is yes, it can be done,
but if you get caught doing it, look out! BTW, even if you are
licensed to operate on these frequencies, the radio still is not
allowed.

|Everyone can at least tell if they keyed up the repeater. No one is that
|stupid.

When it's on emergency power, our local repeater's owner usually
switches off the squelch tail - cuts it to 0 seconds (it's usually
on 15-20 seconds, another story). It's pretty hard to tell if
you've keyed up the repeater if there's no tail.

421. This Week in Amateur Radio #119

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5a2f-vq.sanderman@delphi.com>
Source record: 242803

Here is a summary of news items covered on edition #119 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 14-Jul:

-

1. FCC Approves New, Lower Vanity Call Sign Fees
2. DXAC Votes Against DXCC Status for Aruba and Scarborough Reef
3. QCWA Adds World Wide Web Home Page
4. RAC Looks to Streamline Management Structure
5. Weekly Propagation Forecast with George Bowen, N2LQS
6. "Amateur Radio Newsline" - Edition #934 from Los Angeles
7. Ontario Science Center Adds New Gear in Modernization
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. "The RAIN Dial-up" from Chicago
10. Upcoming Special Event Stations
11. Your Voice Needed for "This Week in Amateur Radio" ID Breaks

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Transmission and production costs were provided by the Marquette Repeater Association of Marquette, Michigan. Funding to access "The RAIN Dial-up" was provided by a grant from the Eastern New York Chapter 95 of the Quarter Century Wireless Association.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

The following is a QST

George Wilson, W4OYI resigns as ARRL president, congress wants to freeze the F.C.C.'s budget and a ham radio computer hacker strikes a plea bargain in a major cyberspace case. These stories and more on Newsline report number 934 coming your way right now.

(*****
GEORGE WILSON STEPS DOWN AS ARRL PRESIDENT

One of the most popular presidents in the history of the American Radio Relay League has resigned. George Wilson, W4OYI says that his continued poor health makes it impossible to remain as the leader of the United Stats only recognized Amateur Radio Society.

George S. Wilson, W4OYI has tendered his resignation as president of the American Radio Relay League. In his letter to the Leagues' Secretary and forwarded to Board of Directors, President Wilson cites his ongoing health problems leading to his inability to travel, and expected long term rehabilitation as the primary reasons for his decision to step aside.
As most listeners are aware, President Wilson suffered a serious stroke last February while in Washington, D.C. on ARRL related business. He spent two months in a hospital nearby the nations capital before being transferred to a rehabilitation center in Indiana. It was from that facility that W4OYI issued his resignation letter on July 1st.
Replacing George Wilson as League President is Rod Stafford, KB6ZV of San Jose, California. As the ARRL's first vice president, Rod has been serving as the League's Acting President since W4OYI became incapacitated. He now officially assumes the job full time.
Jay Holliday, W6EJJ, of Los Angeles, California will be automatically elevated to the First Vice Presidents chair, replacing Stafford. His Second Vice President's position will be filled at a later date.
In his term as the ARRL's President, George S. Wilson has instituted many changes that have affected very soul of the United States Amateur Radio Service. That is a story in itself which we will cover in future Newsline reports.

Don't look for any immediate shift in ARRL policy as a result of this change in top level ARRL leadership. This is because Rod

Stafford and George Wilson come from similar backgrounds. Both are attorneys with Stafford also having served as a judge. As a result, most of the programs undertaken under George Wilson will probably be carried on by Rod Stafford. At least for the time being.

(*****
F.C.C. FUNDING FREEZE

Congress is considering whether to freeze the 186 million dollar budget of the Federal Communications Commission. This, at a time when it may greatly expand the agency's powers.
The proposed freeze was written by Representatives Jack Fields of Texas, and Edward Markey of Massachusetts. They are the chairman and senior Democrat, respectively, of the House Commerce telecommunications subcommittee.
F.C.C. chairman Reed Hundt says that a proposed appropriation freeze for fiscal year 1996 would not provide enough money to carry out new telecommunications laws unless the agency curtailed its other activities. This could have a marked negative impact on all services including Amateur Radio.
The F.C.C., backed by the Clinton administration had requested 223.6 million dollars for fiscal year 1996. No additional employees would be hired. Most of the additional money would go to computerizing the agency.

(*****
N6NHG GETS A PLEA BARGAIN

Ham Radio super hacker Kevin David Mitnick, N6NHG has lucked out once again. The Los Angeles computer hacker arrested last winter in Raleigh North Carolina after a nationwide hunt through cyberspace has reached a plea bargain with federal prosecutors. An agreement that could have him back on the street in a few months.
According to the Raleigh News & Observer, the plea bargain throws out all but one of twenty three charges Mitnick faced. It also calls for no more than an eight month prison sentence on the remaining complaint. The Raleigh paper says that under the plea agreement, Mitnick, who has been held in North Carolina jails since his arrest, admits possessing 15 telephone numbers he cloned so he could burrow into computer systems.
The remaining 22 charges will be dismissed and he is likely to receive credit for time served while awaiting trial.
But Mitnick's problems are not over yet. He will probably face prosecution in several other jurisdictions. One of the most likely in California where he is wanted for violating the terms of his probation.

(*****
MORE TROUBLES FOR KV4FZ

More problems for Herbert L. Schoenbohm, KV4FZ. An administrative law judge assigned to handle a review of his application to renew his Extra class license has granted a request filed by the F-C-C's Wireless Telecommunications Bureau to expand the issues brought in the case. Judge Edward Luton issued an order on June 7th in which he says, quote "it appears that during amateur radio communications made by him on April 3rd 1995, Schoenbohm stated that while he is not permitted to make any requests for political intervention in this matter, other people could make such requests on his behalf". KV4FZ is then alleged to have provided the name, address and telephone number of Congressman Victor Frazer.
The government contends that the Schoenbohm license renewal is a restricted proceeding. It says that Schoenbohms' actions may have violated the Commissions rules regarding exparte presentations. Based on this allegation, Judge Luton granted the F.C.C.'s motion to expand the probe.
You may remember that several months ago Schoenbohm was ordered to show cause why his the F.C.C. should grant him renewal of his amateur radio license. This in light of his conviction on the unauthorized use of long distance telephone access codes. While this is not a violation of the Part 97 F.C.C. amateur service rules, the F.C.C. believes that it has the right to deny any citizen a license if they believe he or she has shown disregard for any law.
Until now, this regulatory interpretation has been used primarily in the broadcast and land mobile services. Schoenbohm is one of the first ham radio operators to have his license renewal challenged under this policy.

(*****
ARRL ON RM-8626

The ARRL has filed some very strong words for publisher Fred Maia, W5YI. This, in its reply comments to the F.C.C.on RM-8626. This is the petition for rule making filed by Maia that seeks to prohibit Amateur Radio stations from transmitting one way information bulletins and international Morse code practice below 30 MHz.

The fact that the ARRL would not support Maia's petition comes as no surprise. But what is unusual is one particular comment the League made in opposing Maia's idea. Most of the comments, the League sez, perceived Maia's effort to have been driven by his commercial interests. He publishes a newsletter aimed at amateur radio operators, he sells examination preparation materials, including Morse Code tapes. The League points out that its W1AW daily HF code practice sessions, which Maia's proposal would ban, are available free of charge. The League calls Maia's petition ill conceived and unthinkable. And it sez the comments strongly support the timely dissemination of amateur radio information, such as the declaration of voluntary communications emergencies by

the F.C.C. and information about disaster relief communications. Among the comments filed in response to Maia's petition, support for the idea is minimal. Opposition is overwhelming. For those reasons, the League sez, Fred Maia's proposal should be dismissed without further delay.

By the way. Some 537 comments were received by the F.C.C. on RM-8626. Almost all opposed the Maia scheme. The ARRL notes that this is an extraordinarily large number of comments in response to any rule making petition. The League says that indicates the depth of the sentiment of amateur radio operators opposed to the W5YI petition.

(*****
W9CSX S.K.

Some sad news to report. Word that Marvin Camras, W9CSX, the man credited with the invention of magnetic tape recording, died June 23, in Evanston, Illinois at age 79.
According to The New York Times, Camras worked and taught at the Illinois Institute of Technology for more than 50 years. As a student in the late 1930s, he built a magnetic wire recorder and later discovered that making recordings on magnetic tape made splicing easier.
In 1944 he was awarded a patent on method and means of magnetic recording and received the National Medal of Technology in 1990. He was awarded more than 500 patents for his work and they were licensed to more than 100 manufacturers.
Marvin Camras was first licensed as W9CSX in the late 1930s and held that call sign until his death.

(*****
GET YOUR CALL

Do you know someone who is anxiously awaiting a brand new or a first call sign? Recent F.C.C. rule changes allow new hams to start operating as soon as the license is granted, and the Commission is now making licensing transactions available on a daily basis.
Unfortunately, the F.C.C.'s phone lines are often busy, so tell that eager new ham to call A.R.R.L. at 1-800-326-3942, between 8AM and 4PM Eastern Time. By doing so, he or she can easily find out their new call sign.
Also, if a V.E.C. is using electronic filing, licensing information will likely be available 7 to 10 days after the exam.

(*****
COAST GUARD NET CHANGE

As of July 1st, the U-S Coast Guard Ham Net move its call-up one hour earlier to 16:00 UTC. The change is being made to allow the Maritime Net to operate without a break in their schedule.

The Coast Guard Net meets each Saturday on 14 dot 300 MHz. It is a directed net open to all active and former U.S. Coast Guard personnel, U.S.P.H.S. Doctors and US Coast Guard Auxiliary. The objective is to share news about the Guard and make new friends with common interests and renew friendships.
Net control operators are needed. Please contact KE7A via packet at WO5H in Dallas, Texas.

HIRAM IMPROVED

Hiram, the A.R.R.L. Headquarters BBS is once again capable of accepting uploads again! The new number is area code 203-594-0306.

(*****
UK REPEATER QRT

If you are planning to visit Great Britain this summer, heres a heads up. The 2 meter repeater near the city of Jersey is temporarily off the air. The GB3GJ repeater will remain silent until a notice of variance to permit it to change sites is issued by British licensing authorities later this year.

(*****
UK MORSE PRACTICE CUTBACK

The Radio Society of Great Britain reports that its GB2CW Morse Code practice transmissions for the greater Glasgow area have been trimmed back to once a week for the summer months. The current schedule is Wednesday evening starting at 20:00 hours U.T.C. on 14.250 MHz.

(*****
COLLINS CONVENTION

The Collins Collectors Association will hold their second annual convention in Cedar Rapids, Iowa, on August 12 and 13, 1995. Included will be a tour of the Collins Radio museum and antenna farm; displays of one of a kind Collins equipment, and "a very interesting program" at the Saturday evening dinner. The Cedar Valley ARC annual hamfest will be held on Sunday, August 13. To register for the convention, contact Tom Vinson, NY0V or Rod Blocksome, K0DAS at their call book address.

(*****
SA AMSAT SPACE COMMUNICATIONS CONFERENCE

The Southern Africa Amateur Radio Satellite Association will be holding its annual Space Communications conference in Durban, South Africa. Spacecon '95 will be presented in cooperation with the University of Natal's Department of Electronic Engineering on September 9. The theme of Spacecon '95 is Development through Experimentation.

While a number of proposals for presentations have already been received, there is still opportunity to submit proposals for papers. Please send synopsis of a proposed papers to Spacecon '95, Post Office Box 1842, Hillcrest 3650, South Africa before July 20th.

(*****
DX-WESTERN SAHARA

In DX, KC0PA, who was active earlier this spring from the Western Sahara, has returned to the country for additional duty until August. He has resolved his legitimacy problems with the Leagues DXCC desk and is signing 4U/KC0PA. The DXCC Desk advised him that they would have great difficulty in approving his operation using an S0 call, but if he obtained permission from the United Nations commander to operate and used the 4U prefix, his operation would probably be approved. Tim has obtained the appropriate approval from the UN commander and is, therefore, hopeful that his current operation will receive the blessings of the DXCC. Unfortunately, contacts made prior to his return to Western Sahara will not count for DXCC credit. His QSL Manager is VE9RHS.

There is no reason he cannot be licensed. Neither the exam teams (I'm a
VE team leader so I know) nor the 610 form ask about prior convictions.
I think the FCC keeps a list of people whose licenses they've revoked and
cross-checks against that, but other than that I don't think there are any
restrictions based on prior criminal record or lack thereof.

> not be the most up to date question pool. Some of the questions will be
> the same, tohers will be diferent.
>
The most recent question pool change was the Advanced pool which just
changed July 1 of this year. Last year it was the general pool and the tech
was the year before that. The exams I'm using (from ARRL-VEC) are dated
in 1995 for Advanced, 94 for Extra and General, and 93 for Tech/Novice.
The most recent ARRL VE manual has the following schedule for exam pool
updates:

Novice and Tech - 1997
General - 1998
Advanced - 1995 (already done)
Extra - 1996

Hopefully this helps. I suspect your technician pool is current unless it
is dated 1990 or before. There are a few questions that have been dropped
from current exam versions (even though they still use the old pools) due
to recent rule changes, which is the reason it may look old. Good luck.

428. HELP: QST Febr.93 - TS50 interface

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: thees@eos.ncsu.edu
Message-ID: <3tmo9c$48d@taco.cc.ncsu.edu>
Source record: 242810

Hello everybody,

I'm looking for an article from QST'93 about how
to build a computer interface for the TS50 yourself.
Unfortunately the library down here has discontinued
receiving QST in 1992!
Anyone who could help me somehow please respond by
email. I'm not sure but possibly this article
is also in one of these nice ARRL-handbooks.

If you have bought the computer IF from Kenwood -
does it come with drawings / circuit plan?
I could use them, too. And of course any comments/
experiences welcome.

430. Can X-Felon get Ham Radio License?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: an154644@anon.penet.fi
Message-ID: <121320Z08071995@anon.penet.fi>
Source record: 242909

Hello
I have a friend who would like to take the Tech/Novice exams for his amateur radio license. He had some trouble in his life about 4 years ago and was convicted of several serious felonies (none involving radio or communications) related to his drug addiction. Today he is clean and sober, and has changed his life around and is married and has a life.

My question is: can he get his ham license or will the FCC deny him on this basis? When you go to take the test, do they ask if you've ever been convicted of a felony? DO you have to give specifics? I think he is too embarassed to give the specifics here in our small community, but he really wants his ham license. Please, all suggestions and comments are welcome. Thanks.

> damages from "magicnet.net" and "rdavis" for every day the above post
> remains public.
>
> WARNING - You should have this post removed immediately.
>
> Howard M. Ginsberg
>

The facts:

Mr. Ginsberg tried to buy a radio from me. I listed a radio and accessories for $550. In that listing I stated the price was firm and not-negotiable. We exchanged E-mail 7 times. I sent him 4 E-mails, he sent me 3, so by my 4-function calculator that adds up to 7. During those 7 exchanges we "bargained to an agreement" just as Webster defines "negotiation." Then he made an offer in writing of $550 for my equipment. I accepted. He then E-mailed me that he had made a "typographical" error and had meant to press 500 on the keyboard instead of 550. I replied, "No deal."

After I reposted the listing and found another buyer for my asking price, I sent Mr. Ginsberg another E-mail. I asked him if he didn't understand my listing, the price of $550, or the words "firm" and "not-negotiable?" He did not respond. I then posted the above article to a thread - "What are the chances of being ripped off?"

Mr. Ginsberg then sent me a reply that he was trying to buy the rig for a poor ham in England and could not overspend. I replied that he should have discussed an upper limit with his friend, and if my firm price was above that, I would have broken off negotiations. His reply back was, "This is what swap meets are all about." I sent him a final reply that we had done the "swap meet" thing during our exchanges, and then reached an "agreement" of $550 which I accepted. And his attempt to lower the offer after the fixed price was accepted just wasted a week of my time.

Now Mr. Ginsberg is threatening the owner of the Internet service provider that I use, and myself with litigation. It seems like a very long journey for an individual to undertake when his destination has already passed by. The owner of my service provider responded to Mr. Ginsberg by inviting him to take whatever steps he thought necessary.

I would be interested in hearing of other such incidents that happened through Usenet and on any newsgroups. I have 14 attourneys on staff and

we are just getting into "Intelectual Property Law."

: I need a couple portables (hand-helds) that can operate in the 151-154 Mhz region.
: This is a commercial band. The problem is that commercial radios seem to be $400-600
: MORE than 2M units and they operate about the same frequency. I understand that
: many of the handhelds (Yaesu, ICOM, Kenwood, etc) can RECEIVE out of the 2M band,
: but not transmit. Can some of these be modified to TRANSMIT (with license, of course)
: in the 154 Mhz region?

If your application is in a foreign country you could do this. If your application is in the US, forget it. To do this legally would require obtaining type acceptance from the FCC, a long and expensive process.

As a long term repeater owner/operator I insist that everyone operate
under all FCC rules and regulations. No unidentified transmissions.
When we have curchunkers we place the repeater in GOMER mode no tail no
beeps, no nothing except the required ID. We want them to go away and
use their radio for something other than a costly beeper... just my two
or three cents... cheers....

440. Re: ARTOB Launch 07-02-95

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: welp@uni-muenster.de
Message-ID: <3tmels$1q8e@majestix.uni-muenster.de>
Source record: 242919

[Please, spread this message to you favorite PR mailbox/BBS,...]

The Nienberge Amateur Radio Group (NW Germany) launched an ARTOB on
sunday, 07-02-95. This is what we did:

Balloon:
call sign: DL0ART/am
QRGs/mod.: 145.200 MHz FM data and call sign (CW) (beacon)
(six tone sigs have been transmitted after the call sign:
two serve as a reference, the others show altitude, balloon and
outside temperature, batterie voltage)
29 MHz remote control
power: 2.5 watts
antennas: turnstile - 2 m
lambda/4 vertical - 10 m
weight: balloon: 1320 g
rig: 1340 g
-> totals 2660 g
diameter balloon: 7.5 ft
gas: hydrogen
lift when launched: abt 200 g

The launch on 07-02-95:
(UTC)
11:15 arrival of the team at launching site Schoeppinger Berg (NW Germany),
JO32PC
11:18 aviation weather data:
ground wind 100 deg / 3 knots
upper wind 130 deg / 6 knots
QNH 1008
no clouds below 5000 ft
11:25 infalting of the balloon
(...)
11:52 turning on transmitter
(...)
12:17 launch
12:20 altitude: 1895 ft
12:21 altitude: 2110 ft
12:22 altitude: 2460 ft
12:23 valve opened (30 s) by control team (DF1QE, Armin)
12:28 -same-
from
12:30 five ARDF teams give QTE information every 10 min. to DF coordinator
Joachim, DL3YBQ. Talk back via repeater DB0EG.
12:34 valve opened (30 s)

12:36 valve opened:
12:39 rate of climb is abt zero; the valve should be closed. The control team is in a village at that time, and somehow the remote control fails (thuogh using 150 W on 10 m). The valve stays opened another two min. till (finally) the control team succeeds with their commands. The balloon now sinks by 120 ft/min.
12:40 greatest altitude: 6200 ft
13:00 altitude: 3660 ft
13:05 altitude: 2785 ft
13:08 altitude: 2085 ft
The DF teams are informed and move to the expected landing site
13:16(?) balloon lands near Metelen JO32OF
13:33 First DF teams DF1QE (Armin), DL3YBO (Ludger) and DL9QJ (Oliver) reach the balloon. All equipment is fully operational (even the teams, hi), the balloon stands (!) in a little grove and is easy to recover.

conclusion:
The sigs from the balloon have been (accidentally) re-transmitted by DB0WA, repeater in Aachen (JO30BT). We got a few more reception reports, but we still would appreciate more!

The planned flight on constant flight level did (because of the remote control failure) not happen. The batterie was almost exhausted (much to fast), because of a defect cell.
The beacon power was too high, maybe a couple hundreds mW would have done.
The DF teams need directions from the coordinator where to go.

Besides that, this launch is considered to be a success, especially the (most of the time, hi) controlled landing procedure looks promising. Now the operation is not limited by a bursting of the balloon in high altitude. It is found easy to recover all the (not yet) valuable rig.

Another launch will be performed on one the next weekends using almost the same rig. After that, data transmissing will be changed to a PR like protocol, using a (8051 or so) micro controller. A repeater 2 m / 70 cm is planned, also adding a CCD camera for ATV or FAX/SSTV.

A big thank you to anybody participating, especially to Armin (DF1QE) who did most of the technics.

Any suggestions and response are welcome (address see below). We'll anounce the next launch (always on a sunday) 48 h in advance.

Best 73, Oliver

444. Ham radio on CNN, noon, July 9!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-08 00:00:00 UTC
From: bbattles@nai.net
Message-ID: <3tmid9$6ia@a3bsrv.nai.net>
Source record: 242923

On Friday, July 7, a video crew and reporter from CNN came
to the 1995 Special Olympics World Games at the Yale Bowl in
New Haven, Connecticut. They shot video of the special-event
station and the ATV operation from the sailing venue, they
interviewed me on cameram, and they did some shooting at ARRL
Headquarters in Newington, Connecticut.

I called CNN this morning (July 8) and was advised that
it was currently scheduled to be aired at noon Sunday (July 9).
This is tentative and subject to change, but if you're interested
you may want to be watching or taping it...and it may be repeated
at other times afterward.

Real international network coverage of ham radio!

Thanks to all who are helping at the
Special Olympics and very 73!

Just like a few years ago ('91/'92?) the California OES put out a
bulletin saying that amateur radio is no longer a part of the state's
disaster plans because of the widespread use of cellular telephones.
What the state neglected to notice, among other things, is that when
power was lost (including the cell sites) after the Loma Prieta
earthquake (Oct 89, I think), the only way messages could be sent in
and out of the Santa Clara Valley was via amateur radio. In SoCal,
they have fires, mudslides, earthquakes, locusts which all can take
out cell sites, but ham radio antennas can be set up faster than the
cell sites can be restored. Not to mention amateur radio (i.e.,
trained volunteers) is more economical than cell phone time, even if
the state did get a discount.

Message-ID: <3tma4ppjv1@mhadg.production.compuserve.com>
Source record: 242931

Internet making ham radio obsolete??? I don't think so.
The two make a wonderful combination of technology. Amateur
radio is still there to allow the use of hands-on experimentation
and operation. Building a project to allow wireless comms is
still one of the most fulfilling parts of the hobby. Putting
this stuff on the air is a lot of fun. The new world of PCS and
other wireless technologies got its start from hams. Besides,
if vhf and uhf mobile is all anyone operates, how can you make an
observation about ham radio in general? Please don't make
blanket statements about the demise of something if you have
minimal experience with it. Embrace the two mediums of
communications. Combine the two and find the synergy that comes
with the marriage.

Besides, when all the L/L wires are gone in a storm or other
disaster, who'ya gonna dial-up?

It sounds that way to me, as well. A "non-disclosure" agreement
makes no sense for something that you're going to publish and sell.

If a repeater operator wants to keep his/her frequency or location a
secret, I have no problem with that. If he doesn't want me to use
his repeater, then I don't want/need the info, anyway. But why
operate an OPEN repeater, and then play games with the info
necessary to USE it?

BTW, I did find a repeater database of sorts. It's available via
ftp from:

ftp:://ftp.mipg.upenn.edu/pub/yee/

I'm not sure of the exact filename in that directory, though. It
was compiled by Conway Yee (N2JWQ) and his email address is:

yee@mipg.upenn.edu

That's the case, Greg, having once worked for an electrical utility.
While underground power lines are less succeptible to ligntning
damage than overhead lines, they're a lot harder and costlier to
replace if they do get fried by a lightning strike, so most
utilities tend to protect them well.

better yet, he could go down to the local library - odds are they have a copy
of at least one edition of the Radio Amateur's Handbook/ ARRL Handbook
for Radio Amateurs...there's probably even one of those library things on
campus (although they might call it a "learning resources center" instead
of the common name).

even better - i bet there's a ham radio club on campus -- check with the
EE department (don't know if LSU is an engineering school or not..) or the
student activities guys. see also magazines like CQ, QST, 73, and others
in the library as well.

This doesn't strike me as being much of a record, considering new trans-Pacific records were recently set on 2304 MHz along a similar path and given that longer 3000+ miles contacts across the Atlantic on 144 MHz have been occuring on a regular basis for many, many years. This source and the ARRL VHF/UHF records archive should be checked before this is declared a new "North American record".

474. Re: Can X-Felon get Ham Radio License?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-09 00:00:00 UTC
From: faunt@netcom17.netcom.com
Message-ID: <FAUNT.95Jul9072136@netcom17.netcom.com>
Source record: 242828

Unfortunately, the new Newsline has a case where the FCC is making a crime committed by an amateur, apparently not connected with amateur radio, an issue in the renewal of an amateur license.

I'd still say go for it.
73, doug

475. Can X-Felon get Ham Radio License?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-09 00:00:00 UTC
From: an154644@anon.penet.fi
Message-ID: <150304Z09071995@anon.penet.fi>
Source record: 242829

I am usually against the posting of private e-mail, but this is a case where I would like to bring forward this issue and get an answer once and for all. First of all, I am pleased that so many people (hams and non-hams) responded with such support and encouragement regarding my question about x-felons getting a ham license. Several people wrote in saying that there are *no* questions about felonies or convictions on the FCC application. One person said there used to be but currently there are no such questions on the application or exam.

Well, then I get the following e-mail in my box and I am confused. This individual obviously "has it in" for x-felons and that is his right. However, I thought his message was rude and inappropriate, particularly coming from a ham. I wonder if he was blowing off steam and just trying to discourage, or if he was right in saying that the application DOES ask if you've been convicted. I would really like to know the truth. That's all: I just want a yes or no, please no flames.

The ">>" are quotes from my original post and the ">" are KB0OXD's responses to the original post:

>> I have a friend who would like to take the Tech/Novice exams for his
>> amateur radio license. He had some trouble in his life about 4 years ago
>> and was convicted of several serious felonies (none involving radio or
>> communications) related to his drug addiction. Today he is clean and
>> sober, and has changed his life around and is married and has a life.
>> My question is: can he get his ham license or will the FCC deny him

> ANY PERSON convicted of ANY felony crimes CANNOT get an amateur radio
> license. The FCC will deny him this faster than you can blink your eyes.

>> When you go to take the test, do they ask if you've ever
>> been convicted of a felony? DO you have to give specifics?

> The last time I looked at a 610 form, it DOES ask if you've ever been
> convicted of any felonies, and you MUST answer that question truthfully,
> completely, and honestly.

Since I haven't seen anyone else post this, I thought I would mention
that
Suncoast Sound has ceased touring this year due to a lack of money.
Apparently, the corps is helping the members join other corps if they
desire, otherwise, they will be back in Florida sometime Monday. The
board member my wife talked to said that Suncoast plans on fielding a
corps next year, I imagine depending on the financial situation. I know
that they have not had much luck with fundraisers this year, and lost
a
bundle on their rained out show, but I sure wish that they would have
toured later, rather than try it now and not finish the season. I really
hope that this is a temporary setback for the corps.
Dave

Boy I want to tell you this is dangerous. A MD friend of mine tells me
these naked hams are fiddling around with something very dangerous. RF
energy in the UHF range and up can be harmful to many different organs,
not just the eyeballs. Lets say one of these naked guys made a
transmission on his 440 HT using a speakerphone and happened to hold the
radio too near his "waist"..... man oh man - you are looking at a
potentially nasty situation.

From: andyneal@ocf.berkeley.edu
Message-ID: <andyneal-0907951133330001@dial-berk1-17.iway.aimnet.com>
Source record: 242836

Unable to obtain the latest ARRL repeater guide, I would like to know if any ham with spare time and a current repeater directory could e-mail the freqs./offset/pl. of some open repeaters in the 2m/70cm bands around Sacramento, CA.

I'll be going there on 22 July, and would like to be able to communicate with some friends back in the San Francisco area over the airwaves. Linked repeaters are, therefore, a bonus.

Please reply via e-mail to: andyneal@ocf.berkeley.edu

Thanks for your help.

This op was in the IARU contest this weekend, and I see no reason
to question the call. ZA is not rare anymore, and there are plenty
of ops who use ZA/own-call legitimately. The fashionable pirates
these days use 3A or 5A calls.

Admittedly, the only OK5 calls I have heard on the air have had
one-letter suffixes, so you can still worry about it if you want
to. Best thing to do would be to send a card via the OK bureau,
and meanwhile work several of the other ZAs who are active daily.

>without going into a bunch of little details.

Curtis, et. al. -

I echo your advise - almost to the letter. I would add the main reason
that it's best to be queried for the information is: the 911, or emergency

operator, is generally filling out a computer screen or some log; so, the order of information is important to faciliate rapid logging - and, of course, emergency deployment.

In conflict, I would say that the only time anyone "spills their guts" is when they're likely to die and time is very critical. ie., your airplane just lost it's only engine and there's about two minutes left until a forced ditch. Then, it's time to spill all: id, location, parties on board, heading, and intentions. But, this is not generally (if ever) done to 911 or on the ham bands at all.

Curtis, we'll have to meet sometime!
Walt

As others have pointed out, "yes, this is true". You're far better off
buying a used Motorola HT and converting it to amateur use than vice
versa.

Speaking of which, I picked up a Motorola APCOR at a recent hamfest (for
less than $100 - quick, go tell your comm manager :) and am looking for 1)
a battery - I have the charger; 2) a schematic/service manual; and 3)
notes for converting this to the 70 cm amateur band.

Yea Burt. You see they are playing on our toys, Everyone is welcome to
use the repeater if they follow the rules, the autopatch is even open
to all. All of my friends have the codes to turn on the repeater.
They also turn it off as I do on people who don't follow the rules.
If we want to use it we just turn it back on.. Doesn't cause us any problem
at all We only have problems with repeaters because owner/ trustees
don't follow FCC rules and regulations. People forget that they are
using our station licence along with their own. I'm sure that you have
noticed that some repeaters run rampid with violations while other's
are very calm. The only reason is enforcement... cheers

I hope this is the right place to discuss this and if not let me know I will take it somewhere else. I feel it is two issues that should be addressed. My name is Jim, and my call is WA4ZXA. I am an advance class operator. I am getting ready to take my extra. One thing I will do before I go before any VE team I will ask are there any no code extras on the team. I mean someone who got there extra without taking the code. I am not going to have someone give me a test on something that they cannot do. I know there are people out there who truly deserve their license in that manner but in this area it is getting to be a joke. I don't consider high blood pressure a reason. I believe this should be a rule in the VE program.

The other thing is on a local repeater the control operator has hooked up a remote link setup. On this repeater a no code tech can bring up the remote base and work anywhere in the advance portion, since the control operator is only adavnce. I am talking anywhere on the HF bands. They could work WAS, DXCC, and many other awards. If they do not tell the station on the other end they are operating remote no one knows. I do not feel that there should ever be a link between VHF and HF. Plus you now have a no code tech operating in the bands most of us worked hard to get to.

I know the FCC cannot do anything or won't and the ARRL (which I am a member of) is to busy into ads to get into any issues, so maybe there might be a way for the Hams to form a group. I mean a group that could lobby and tackle issues without Kenwood, Yaesu, and Icom being involved.

These are only my opinions, but I feel they are issues that need to be addressed. I am sorry if I put them in the wrong group and will move them wherever they need to be if someone will tell me. Maybe a refractor should be started to discuss these issues. Thank you for reading and I will get off my soapbox.

73's Jim // WA4ZXA

Hi Peter. I don't have an Apcor manual - - those are pretty rare, but you
can probably find a manual for an MX300/330 type radio, and the
transmit/receive boards inside your Apcor are basically the same cards.
They also take the same crystals. Is yours the 1watt or 12 watt version?
I have a 12 watt which is still on the Med 1- 10 freqs. I was told by our
local service tech that Apcors are a real pain to change the frequency on.
They are full duplex, and the internal duplexer is not easily retuned.
Let me know what kind of success you have.

When you say no code extra, do you mean Extras who never passed a code test,
or Extras who got the 20 wpm waiver? As you probably know, the 20 wpm waiver
still requires the 5 wpm exam. I agree, I wouldn't want to take an exam from
someone who did not pass the exam, not because they couldn't, but because
if a question about that part of the test pops up, they may not be able to
answer it. My code is lousy, and if I ever become a VE, I plan on only
administoring the written part. Why give a test if your lousy at it?

>The other thing is on a local repeater the control operator has hooked up

Obviously that is illegal, however if they were stupid enough to submit
QSLs for an award they would be caught. If the ARRL was to ever run a
check on the callsign of the person submitting the cards, they would not only
not get the award, but would hopefully be punished (if the FCC did its job).

>I know the FCC cannot do anything or won't and the ARRL (which I am a

Why would the manufactors be involeved? The FCC can do something if the
person is caught, they just don't do anything as they are cutting back in
personnel. ARRL doesn't have any legal power so the most they could do is to

turn them over to the FCC.

>These are only my opinions, but I feel they are issues that need to be

The no code issue has been going on for sometime, and it will continue for
years to come.

>before I go before any VE team I will ask are there any no code extras >on the team. I mean someone who got there extra without taking the code.

I don't understand this. ALL extra class ops must take and pass a 20 wpm code test. If they cheated, I am with you, get their rear ends out of radio. But, hey, all the extras I know have taken the 20 wpm code test and passed, even if they later didn't use it and forgot!

>The other thing is on a local repeater the control operator has hooked up >a remote link setup. On this repeater a no code tech can bring up the >remote base and work anywhere in the advance portion, since the control >operator is only adavnce. I am talking anywhere on the HF bands. They

Well, if the control operator is actually in control of the remote, that is fine. I can have a novice guest to my home station and put him on 20 meters in the DX window as long as I "control" my station and my callsign is used. However, if you are saying that these fellers get on and just work HF on their own, that sounds pretty unruly, and I would complain to the repeater owner. But check carefully on it, there are local systems here with remotes where they are very careful to check license class and who is actually controlling the remote base to keep it legal.

>could work WAS, DXCC, and many other awards. If they do not tell the >station on the other end they are operating remote no one knows. I do not

Well, I suppose anyone could cheat like this. The rules state, I believe, that you cannot work these awards remotely.... If your argument is to catch cheaters, good. If it is that the possibility of cheating bothers you, well, OK, but it doesn't mean the whole thing is bad.

>feel that there should ever be a link between VHF and HF. Plus you now >have a no code tech operating in the bands most of us worked hard to get >to.

Well, again, sure, I understand, but if a kid comes to MY station I am going to put him on 20 to work some DX on SSB to GET HIM INTERESTED in UPGRADING! It is not all bad, at all.

>These are only my opinions, but I feel they are issues that need to be >addressed. I am sorry if I put them in the wrong group and will move them >wherever they need to be if someone will tell me. Well Jim, I support you bringing up the issues and it is nice to get such respect in advance. I hope I have returned the favor, even if I disagree.

What did he do? IF the FCC does any kind of background check on new
license applications, its certainly not very widely known.

I can see where they might be concerned about someone who had been
convicted of some form of communications related fraud, for example,
but basing license qualification on ANY conviction would be a stretch.

I can't see where anyone violated anyone else's privacy here. No names,
anon server. No bad form.

I agree -- better if Mr. Buffington had just answered the question.
After all, he's a 1L law student ....

As far as I know, the FCC does not restrict licensees based on a personal
background check. In another newsgroup, someone mentioned that there
was a current RENEWAL case under review because of some kind of criminal
activity, but no details.

I'd guess you might have a problem with a conviction on something related
to communications fraud -- like telephone long distance fraud or theft
and sale of cellular phone ID codes.

Yes this is funny. Please see June 95 QST, pg 92 for a description of the
Brendan trophies. The Irish Radio Transmitters Society will award them
to the 2 stations making the 1st 2 way contact between Europe and America
on 144mhz using terrestrial propagation.

SB DX @ ALLBBS $OPDX.214
Ohio/Penn DX Bulletin No. 214

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 214
BID: $OPDX.214
July 10, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & 59(9) DX Report, ARRL Bulletin, AD1C, N3AHI, K4CEF & Southeastern Cluster Group, K4LYG, N4VZ, W5HVV, N6RFM, W6EL, KY0A, DK3VN, DF4RD, DL9GOA & DX News Letter, VA2RC and VE2TBH for the following DX information.

3A, MONACO. Laura, 3A2MD, is active almost daily on 14250 kHz (+/- QRM) at 2100z, sometimes on the DX net that is on that frequency and time.

3W, VIETNAM. A station signing 3W5FM has been active over the past week and weekend on 14195 kHz around 1330z. No other details available at this time.

5A, LIBYA. Latest word we hear on 5A is that the operation has been slightly delayed, but will be active on July 11. The source for this was UX4UA who had spoken to Toly, UT3UY, himself, and this information was passed on to the W2MIG's net. It has been reported that several individuals have been working with Toly to make sure that he is aware of ALL the proper documentation he will need to provide to the League.

A5, BHUTAN. Reports of VK9NS being in Bhutan are apparently false. He was heard on July 3th on 14260 khz operating from Norfolk. Meanwhile, a station signing A51OS was reported on 14247 kHz (3rd July 95) talking to WA4JTK and VP2VF. The station was too weak for WA4JTK to put on the DX net but said he would return the following day at 2200Z. No other QSNs have been reported since. Meanwhile, the DXNL states rumours are circulating that Jim, VK9NS, will be active in a few days from a rare location, and that he could work as A51JS from Bhutan or from Bangladesh (S2). So watch out for him on the usual DX frequencies. QSL via VK9NS.

NEW IRC RATES IN THE U.S.!!! Effective July 9, 1995, the selling price for U.S.-issued coupons is $1.05. While the redemption price for foreign-issued coupons is $0.60.

OZ, BORNHOLM ISLAND (DENMARK). Peter, DF6QN, will be active from here (EU-030) July 29th through August 11. He is planning to be active near the IOTA meeting frequencies 7060, 14260 and 21260 kHz. His callsign was not mentioned.

QRP DXPEDITION. Stefan, DL1FDF, will be active as VY1QRP, from July 24th until the 16th of October. He will be traveling through Canada:Ontario VE3/, Manitoba VE4/, Saskatchewan VE5/, Alberta VE6/, Brtisch Columbia VE7/, Nortwest Territories VE8/VY1QRP and last but not least from the Yukon Territory as VY1QRP/p. Look for him around 0500z on 14060 or 14285 khz. Also check the QRP frequencies on: 80m (3560 or 3690 kHz), 40m (7030 or 7090 kHz) and 20m (14060 or 14285 kHz)

QSL INFO. Steve, W4/YV5DTA, who was active from the Florida Keys (NA-062) last weekend (July 1-2nd), states to QSL to: Steve Morao (YV5DTA/W4), 1920 NE 1st Terr # 104H, Ft Lauderdale, FL 33305.

S0, WESTERN SAHARA. Tim, KC0PA, continues to remain active from here as 4U/KC0PA. He was reported earlier this week on 30m CW. His CW is very slow, but he is giving it a try. He was also heard on 18137 kHz 1325z. Tim will be going QRT from S0 on August 1st.

TY, BENIN. Ken, WA4OBO (ex-TT8OBO) has plans to stay in Benin several times during the next two years and will then become active as TY8OBO. It has also been reported that Ken has applied for a license to operate from Ethiopia. This operation is planned to take place in August or September. Ken operates mostly in SSB on the HF bands. QSL via homecall.

V5, NAMIBIA. Charlie, KY0A (Rocky Mountain DXAC) will be active from here the first part of August (KY0A says probably August 7-10th) from Luderitz. He then states he will be operating in other places in Namibia but not as heavy as his Luderitz operation. Charlie will be signing either V52/ZS6YG or V52YG. He will operate on CW only on 160, 80, 40 and 30 meters. There is the possibility of some 17 or 12 meter activity. This depends on his business trip activities. Charile adds that after his V5 activity, (during September) he will be active as ZS6YG and will operate from various areas within South Africa (CW only). There is the possibility he could also be active from A22-land, but he does not have a license nor has applied for one yet.

VP9RND CERTIFICATES. Bob, WB2YQH (editor of the 59(9) DX Report) states that the certificates for working VP9RND (on May 20-21st) have been sent out on July 5th to all who sent SAE with proper postage funds. This station was active to commemorate the 200th Anniversary of the Naval Dockyard in Bermuda. Anyone needing a certificate may send an address label and $2.00 or 3 IRCs to WB2YQH, P.O. Box 73, Spring Brook, NY 14140. The envelope, cardboard stiffner, certificate and return postage will be supplied to any destination.

XJ1, PICTOU ISLAND (Nova Scotia). Members of the West Island Amateur Radio Club (WIARC) of Montreal will be active from this small island in the Northumberland Strait between Nova Scotia and Prince Edward Island, Canada between July 27th and August 3rd, with emphasis during the IOTA

contest (July 29-30th). Pictou Island is a rare IOTA (Islands on the Air, NA-154) and also counts for the Canadian Islands Award group (NS-05). The special callsign XJ1CWI will be used. Operations will be on or near the following frequencies:
CW - 1835, 3510, 7050, 10110, 14040, 18080 and 21040 kHz
SSB - 1835, 3795, 7250, 14195, 18120 and 21320 kHz
VHF - 50.11 and 144.3 MHZ
RTTY- 7090 and 14090 kHz
Satellites - RS-12 Tx 21.220, Rx 29.420, RS-15 and popular Oscars.

QSLs to: The West Island Amateur Radio Club Inc., P.O. Box 884, Pointe Claire/Dorval, Quebec, H9R 4Z6, Canada The special prefix is to commemorate the 100th anniversary of the first man sailing around the world in solo. In 1895 Nova Scotian Captain Joshua Slocum left Boston to begin his circumnavigation of the Earth in the 36-foot sloop Spray. Three years and 46,000 miles later he completed his journey, landing in Fairhaven, Massachusetts. This Nova Scotian Dxpedition to this semi-remote island will be dedicated to him.

XJ2, ANTISCOTI ISLAND (CANADA). Frank/VA2RC, Gilles/VA2LG, Jean-Marc/VE2BZL and Jean-Pierre/VE2DFY will be active from (NA-077 in Quebec Province Centre Group) July 15-21st. The callsign to be used is XJ2CQ. The frequencies to be used are: 80 meters (SSB - 3737 / CW - 3650 and 3707), 40 meters (SSB - 7057 / CW - 7007) and 20 meters (SSB - 14267 and 14270 / CW - 14027). QSL via VA2RC, 4434 Astrolabe, Quebec, Quebec, Canada, G2B 2G9.

DXCC NEWS. The ARRL DXCC Desk announced that documentation for P5/OH2AM has been approved. In accordance with a news release dated July 16, 1991, North Korea (Democratic People's Republic of Korea) will now be added to the DXCC Countries List. The DXCC Desk will accept QSL cards for this new country starting October 1, 1995. QSL cards received at the DXCC Desk before October 1, 1995 will be returned without action.

ADDED NOTE: There have been a few reports that Martti, VR2BH/OH2BH, was heard active in the IARU Contest this past weekend and he has stated that the next P5 operation will take place before the Beijing DX Convention in October. The operation will be much smaller than his ZA operation due to the delicate situation in North Korea.

OPDX GOES ON VACATION. The OPDX Bulletin will not be published for about three weeks. There will be no publications for July 15, July 22 and July 29th. I will be visiting Los Vegas, NV and Mariposa, CA, for a short time, but spending most of my time in Simi Valley, CA. Please keep sending your DX information. --- Thanks for all your input de Tedd KB8NW

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every

second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. Thanks to everyone who responded. My scanner's IF is 10.8Mhz. Tuned to
145.25Mhz and found a repeater that has just started operating in my
area. 166.85-(2*10.8)=145.25. Thanks again for all the responses.

George

> them?

Apparently not. As I understand it, Japan already grants codeless
hams low power HF phone privileges, and I see no multi-national
"peacekeeping" force being organized to enforce treaty provisions to
the contrary.

1995 14 23 24 18 14* 14* 13* 12* 11* 10* 8* 8*
1996 8* 8* 7* 7* 7* 8* 8* 9* 10* 11* 13* 14*
1997 16* 18* 20* 23* 25* 29* 32* 37* 42* 48* 53* 59*

Asterisk indicates predicted value.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

==========

2. FLARES AND SHORT-WAVE FADEOUTS - NONE

2.1 Comments on Solar Activity.
Solar activity was at predominately very low levels for June.

The monthly sunspot number in June was 15.8, which is the 3rd lowest in the
decline of this solar cycle (only 14.6, April 95 and 14.7, May 95, were
lower). This low sunspot number is the 3rd month in a row of such low values,
confirming a trend downwards in the cycle.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
1 Jun 95 active to minor storm
3 Jun 95 unsettled
19 Jun 95 unsettled to active
20 Jun 95 quiet to active

Recurrent geomagnetic activity observed 18-20 June was generally stronger this rotation than during past rotations. However, the other major recurrent pattern of recent times did not assert itself as expected over the period 26-30 June.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)

DATE T MUFs
1 Jun 95: 10 to 15% below predicted monthly values

The lack of ionospheric depressions in June continued the trend noted last month. However, mid to high latitude propagation conditions may have been degraded during the month, despite the absence of significant geomagnetic activity.

==========

From: Tony Vella <tonyv@magi.com>
Message-ID: <DBH120.6Bo@magi.com>
Source record: 242860

I have a pc, windows 3.1, a Kenwood R-5000 and a Yaesu FRG-8800. I would like to start logging cw transmissions but I don't know morse code. I was recently told I could somehow connect one of the receivers to the pc and when I catch morse on the cw I get to see the code converted to text on the monitor. If this is true I would like to know what I would need to buy and where from. Thanks.

This Davis guy is out in left field. Just for kicks, after reading the
above diatribe I emailed him and offered him $350 for the radio.
He accepted the offer, and added that if I didn't send him the money
he would sue me.

I suggest everyone stay far far away from this dingbat.

Hi, I have this stuff for sale. I need to get rid of it.
All prices include shipping...

Timewave DSP-9 Latest version. Great for HF work or SW listening. They sell brand new for $165. Get this one (Like BRAND NEW) in box for $110 shipped.

Kantronics KPC-3 packet TNC about 7 months old with all the stuff (Books, ect) shipped for $65!

MFJ/Bencher Keyer combo. Great for saving desk space, also nice if just starting out because the keyer will key lower than 5 WPM and has a built in practice ocillator. Why learn on that darn straight key when you KNOW you're gonna get paddles eventualy anyway. Put a 9v battery in it (it fits inside, there is a bracket and a cable inside for it) and practice ANYWHERE!!! Why waste your lunchtime eating? Learn CW and annoy your co-workers. $65 shipped.

If interested, e-mail me at WCOYLE@DCCC.EDU

Tnx & 73
Bill

Hi Alex my name is Mike and I am listed in any callbook on the ARRL SWL Bureau that I take care of. I have a very big collection of qsl managers so I may be of some help to you. I will look these up for you and sent you the managers via the Internet. Along with the swl bureau I have my own dx newsletter called the hamband dxer. In my spare time I also run a bulletin board called the byte stops here!. We have ham programs on this board and every month we have a updated file for our qsl manager database. The board is available 24hrs a day at 1-715-341-9723. I will wait to hear from you first before I look up these managers for you. Please reply that you have received this message. 73's and the very best of dx. Mike WDX9JFT

516. Re: 1 Hour Code Course?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-10 00:00:00 UTC
From: davros@news.eden.com
Message-ID: <3trgdk$j0o@matrix.eden.com>
Source record: 242739

The way I learned code was...

Well, I learned it out of a book first. The book had dahs and dits written down...but I had the rhythm all screwed up. Then someone straightened me out there one day, which didn't take much.

All I did after that was listen to a shortwave receiver whenever I felt like I wanted to: everything from CQ CQ CQ DE WNU32 WNU#@ WNU#@ QSZ 4 8 12 16 mhz obs? CQ ... to hams on the novice band and everything else in between, regardless of speed, just to see which letters I could pick out. I started doing this in July of '87; the first cw I ever heard was on Field Day '87, and I was surprised that I could copy anything at all, because on the way over was when I got my rhythm problem all straightened out. Between July and September, I listened. I listened to voice, I listened to cw, I listened to it all, and then on something like September the 23rd (well, end of September anyway) 1987, I passed my 5 wpm 100%. No kidding. *Then*, after I had passed my test, I found W1AW, and found (to my amazement) that I could copy about 13 WPM! (By the way, I passed my novice theory only barely, as I had studied out-of-date material.) In January, I went to take my General (figured I'd just skip over Tech), and passed my 20, at the urging of my elmer. "Sit in on it anyway," he said, "and the 13 will sound slower. Besides, you might just pass." Well, I did pass. Then I went on to fail tech and general (in reverse order--they gave 'em to me wrong way round). So, "I was a 20 WPM Novice." Not for long though, because the next month I became a 20 WPM General...then two years later, a 20 WPM Advanced... then, two years after that...Extra. So it's do-able. I was only 14 when I passed my Tech, and still 14 when I passed my General. I passed my Extra 2 months before I turned 19. Now, whether I do code or not--sometimes I have long dry spells--I can copy 25 wpm solid, no problems, in my head. Sometimes faster, on good days. If I practiced more, who knows? Would you believe I actually enjoy cw?

By the way, if you really learn cw, you don't forget it. I even decode car horns sometimes that don't intend to be sending. *Heh...* The problem, to my mind, is that people go in thinking they won't like it, that it'll be hard, that they're just going to learn it, dammit all, but they aren't going to like it. So it's that much harder. People make the whole thing a lot harder than it needs to be--and that's really a shame. It's not all that bad, really--about like anything else, I suppose.

A little bit of advice with SuperMorse, DO NOT run it from under Windows [tm].
It screws up the weighting and timing factor pretty good! Make sure you run it
from a DOS prompt and set your operating parameters.

Hope this helps.

Source record: 242741
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I have a collins 75s-3 receiver. It has crystals for the older ham bands.
If I select one of the higher ham bands (14.X, 21.X etc), and I peak the
pre-selector at approx 7MHZ (rather than peaking it at the real freq range for
that band), I can pick up lots of shortwave broadcast signals...My question is:

Is it possible to come up with a formula so I can tell what frequency I am
listening to? (based on band setting, preselector setting and tuning knob)?

Thanks much...
-boB

}

Ah yes Jim, more discrimination. I guess what you're saying is that a person
who is handicapped in some way and unable to complete the 20 wpm,
i.e: has a waiver, has no right to be there...

Our club has such a person, although not yet an extra - and quite frankly
I would be more than happy to have this person serve on our VE team! He is in
no way unable to understand and interpret the items needed to administer
any test. Further, I look forward to the day when he decides to make
that final jump to Extra as my team will no doubt be the one to
administer the test and sign off on any waivers - and I can tell you
there won't be a moments hesitation the team's part as well.

You need to seriously rethink your position Jim.

David,

Do not waste too much time in the search of a service manual for the IC-471 radio.
There never was such a manual, only the IC-271 had a service manual. I can tell you
that the output of the PLL needs to be with in 1 db for the entire tuning range. And the
typical
service monitor spectrum analyziers do not cut the muster when working on this radio. theu

do not go low enough in level, and if they do they are not calibrated close enough. Icom uses an 18 GHz spectrum analuizer for this job, Ship the radio to them you will be glad you did.

Gary

You might try Gordon West out here in the LA area. He runs weekend classes that will get the code into you. He also has the theory part.

He took me from "Terminal Tech" to General in one weekend. It was just the 13 wpm, but it worked. You need about 8 wpm to go for the General, but if all you want is 5 wpm, I am sure you could start from scratch.

Look up his phone or address in one of his books.

I have no connection with Gordo other than being a satisfied customer!

Yours,
cantrell wa2vxu

523. FT-51R .RDF Files

|>

Since Floyd is coming to us from nando.net, He's prolly in the Raleigh
NC area, where there is a 2 meter repeater on 147.39 linked full time to
a 10 meter repeater. The 10 meter repeater identifies as required.
There is nothing illegal about this operation. I don't particularly
like it, but it's legal.

No punishment is due. You can work DX on a link such as this. As
far as awards go, are DXCC and WAS awards available for QSOs made
via repeaters?

You don't say what part of the world you are from, but I would be interested in sharing frequency information also. To make this idea useful, I think that we need to place the .RDF files in an FTP site somewhere so that you can search for the correct file for an area.

Who maintains an appropriate FTP site where this archive could be kept?

For anyone interested in an .RDF file for the Yaesu FT-51 for Austin, TX you can e-mail me at this address.

I've got one of those (from JC Whitney). It works OK, but not the sort of gizmo you'd want to use for working 11 meter DX. If you can see'em, you can work'em.

I opened the box up. It consists of a pair of LC traps. One is a parallel circuit which isolates the AM/FM from the CB. The other is a series circuit which tunes the CB to the antenna. Both circuits use a variable capacitor for the tuning, and depending on which antenna I used (long story) it did or did not have sufficient range to tune for <2:1 SWR.

They probably wouldn't work for ham use, but then again, you could build one yourself for less cost, that would.

Netting? Dunno.
Zero Beating -- matching your transmit freq to that of the person you're communicating with. This is easy with voice -- adjust RX freq until the voice sounds right and transmit on same. To do this on CW, you need to know what the tone should sound like (not too high or low).

This is NOT a correct statement. What Apple wrote in their petition is: "Because NII Band technologies generally will be a more hospitable 'neighbor' than ISM devices ..., the NII Band allocation likely will not adversely affect existing radiolocation or Amateur operations." Apple absolutely HAS NOT proposed to take this band away from Amateur use. Jim Lovette, author of Apple's petition, has a rusty ham ticket in his background although he is not currently active. He has worked cooperatively with the ARRL in recent FCC rulings concerning Part 15 usage of the 902-928 MHz and the 2.4 GHz band.

The 5.7 GHz band is already a shared Part 15 band. Apple's NII petition is basically an enhancement or extension to existing Part 15 usage. The petition does not now specifically give technical requirements to the proposed usage but it would appear to be basically low power devices (like Part 15) but with directional antennas allowed.

I can hardly call this a "taking" of the 5.7 Ghz Amateur band.

Our best hope for continued access to UHF spectrum is to share our allocations. Commercial interests don't particularly want to have shared bands. All Amateur allocations above 420 MHz are today shared bands. And remember that between 1980 and 1989, we lost an average of 9 MHz of spectrum each and every year. 1989's loss of 220-222 MHz made 1989 a fantastic year for ham radio - only 2 MHz lost!

The point about not publicly posting private e-mail has nothing to do with the law (at least not as far as I know) and everything to do with courtesy and good practice. My personal opinion is that it is appallingly bad form to post a private e-mail message without the author's opinion. I have read comments in various internet guides that made this same point.

Someone else here on Usenet pointed out that the chap that did this did not identify himself, but instead hid behind an anonymous identification.

BTW, FWIW, I have no opinion, none, about the convict issue, except to say that if someone has done his or her time, then hopefully that's that, and society doesn't hold a further grudge.

I don't, in any case. :-)

This is older than Berne. You may own the letter (and can sell it,
if it's a collector's item, etc.) but you can't publish it. Why do
you think people who publish collections of letters have to go
around getting the permissions of the writers (or their estates)
before they can include them in the book?

Of course there's little or no case law on e-mail, and I still feel
free to post nasty or abusive mail someone might decide to send me.

I think you have only a rumor. I am aware of no Federal Law that protects hams explicitly from state anti-mobile-scanner laws. Of course, it is a winning argument that your Federal license gives you some leeway over state laws, but that is not something your local police can honor right off the bat. They are under a different immediate command in their jobs. There are probably some state laws that specifically exempt amateurs from anti-mobile-scanner laws but they won't protect you except in the state where they originated.

Keep looking, and if you actually find something, enlighten us all!

Grant,

This is the KV4FZ thing ... the Commission is trying to jerk Herb's license based on his felony conviction for telephone toll fraud.

Wagga Field Day

The Wagga Amateur Radio Club will be holding its 1995 Riverina Field Day on the 6th August 95. The venue will be the Police Citizens Youth Club Gurwood Street Wagga commencing at 9.00 am.

The entrance fee will be $6.00 for adults and $4.00 for senior cardholders and pensioners, school children free.

There will be the usual displays from Daycom, Andrews Communications, Melbourne Satellites, Strictly Ham, ATV, ATN Antennas, Icom. There will be demonstrations of the latest in mobile antennas from ATN and also the latest from Wally VK4DA on ARDF. There will be a mobile foxhunt around the city so bring your gear with you.

Disposal tables will be available on site for selling and buying.

Food and drinks will be available from the club and if you desire something a little stronger the leagues club is across the road.

There will be convention dinner on Saturday 5th August so if any one wishing to attend could they please let me know on the 23rd July as we have to make the booking. The cost of dinner will be $16.50 and if you book and cannot make it please let us know by the 30th July as we have to pay for the number booked whether you turn up or not. So please let us know.

Accommodation is available at the PCYG for $8.00 per night which includes a hot breakfast, so bring your sleeping gear, or accommodation is available at the Junction Motel or at any of the many motels, hotels and caravan parks.

Directions on the day will be available on 146.750 Ch3 on the day.

For more information contact Paul VK2KVY on 069 243009 or on packet on VK2KVY @VK2KAW and we will get straight back to you with the information you request.

VK2 WICEN news

VK2 WICEN News

Members with access to Internet ought to be aware that following a re-arrangement of the "aus.radio" hierarchy, the new WICEN

newsgroup is now "aus.radio.amateur.wicen".

Central Coast WICEN will be holding their AGM on Friday, in the Central Coast Amateur Radio clubrooms, Dandaloo St, Kariong; the meeting will commence at 8pm. This will be followed by the Hunter meeting on the 17th, conducted by Pauline VK2GTB. The State Annual General Meeting is Sunday 30th July, at Hornsby RSL Club, and of course the bar afterwards; all are welcome. There will be further details in a later broadcast, and of course in the newsletter as well.

The next major event is the annual City to Surf Fun Run, on 13th August, for which David Shaw VK2TIP is the event commander. He needs quite a number of people for this race, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100. This is followed by the Shahzada Horse Enduro, run by Andy VK2XRX over 21st-25th August.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer/ex

News briefs

NEWS BRIEFS

Communications news is in somewhat short supply this week, so to fill the gap, we remind you that the Red Cross is still urgently looking for donors to bring blood stocks back up to safe levels. Please give up an hour of your time, and half-a-litre of blood this week.

(A public service announcement from Richard VK2SKY, who will make his 36th plasma donation this week)

NTAC request

NTAC news

Ian Rosser VK2XB has requested that if any clubs have not yet received their applications back from the SMA for repeaters, links, or changes of frequencies, or whatever, would they please provide him with all relevant information as soon as possible.

Club news: Liverpool

The auction held yesterday (8th July) by the Liverpool Radio Club was a great success and the committee wishes to thank all those who participated for helping to make it a fun day. We hope you went home with something precious and useful or else it will turn up at the next auction.

The next general meeting will be on Wednesday night where we will probably spend much of the evening patting each other on the back and planning the next event.

The venue as usual will be the hall at the Glenfield Scout Camp in Cambridge Avenue at Gelnfield, just off Moorebank Rd.

See you there at 7:30pm.

Brad VK2QQ Publicity Officer

Club news: Manly-Warringah

Members of the MANLY-WARRINGAH RADIO SOCIETY are reminded that the Society's Annual General Meeting will take place on Wednesday 12 July, at the Warringah Volunteer Services Centre, Terrey Hills.

The meeting starts at 8pm, and all club members are encouraged to attend, and hopefully nominate for Committee positions as well!

See you there!

--Richard VK2SKY, MWRS Publicity Officer

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

THE NEXT MEETING OF THE SOCIETY WILL BE ON WEDNESDAY 19TH JULY AT 7:30 PM AT THE CLUB HOUSE IN VICKERY AVENUE, ROSE BAY, NEXT DOOR TO THE R.S.L CLUB. DOORS OPEN AT 7:00 PM.

THE MAIN ITEM FOR THE EVENING WILL BE A TALK BY RICHARD SOULIE, VK2ARS, ON HOME-BREW EQUIPMENT.

PLEASE NOTE ALSO THAT THE SOCIETY'S PREMISES WILL BE OPEN DURING THE AFTERNOON OF THE FIRST SATURDAY OF EACH MONTH FROM 1:00 PM, PROVIDING A GOOD OPPORTUNITY FOR A GET-TOGETHER OR TO USE THE CLUB'S LIBRARY OR EQUIPMENT.

THE SOCIETY NOW CONDUCTS BOTH THEORY AND MORSE CLASSES AS WELL AS AMATEUR EXAMS. DETAILS OF THESE CAN BE OBTAINED FROM GRANT ON 319-1913.

--SIMON BUXTON - VK2EII - PUBLICITY OFFICER

CLUB news: SPARC

The next meeting of the Sydney Progressive Amateur Radio Club

SPARC

will be held on Wednesday the 13th July 1995 at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milson's Point, in the first arch below the railway line (the State Emergency Services headquarters for North Sydney) and immediately to the north of Lavender Street.

Our guest speaker will be the current Treasurer of SPARC, Danny Butler VK2KDG who will be describing the construction of a Baycom packet system based on the board available from RCS. If time permits, Peter, VK2AQJ will be presenting a nostalgic look at 100 years of portable radio communications, illustrated with slides.

Refreshments are available and all are welcome.

Peter Jensen VK2AQJ, President

Club news: CCARC

The Central Coast Amateur Radio Club, in conjunction with Central Coast WICEN will be holding a joint Lecture night on Friday 21st July. The Lecturer will be Mr. Ray Lotty, Emergency Services Chaplain.

Ray will be speaking on stresses on Emergency Services personnel due to involvement in emergency incidents such as bushfires, floods, accidents, etc. Since WICEN and Amateur Radio personnel may be involved in these situations, what Ray has to say is felt to be most applicable.

Members of the Central Coast Amateur Radio Club and Central Coast WICEN, as well as any interested visitors, are invited to attend.

The lecture will commence at 8.00 p.m. on Friday 21st July, and will be held at the Central Coast Amateur Radio Club Rooms, in Dandaloo Street, Kariong.

from: Bob Fitzgerald, VK2XRF

Club news : St George

From the St George Amateur Radio Society Inc.

The Society will run its tenth annual 80 metre contest next Friday evening the 14th of July 1995.

Although this short 4 hour contest is restricted to St George members, it does present a great opportunity to non-members of the Society to qualify for the issue of a St George Award and of course to have some fun.

Contest rules are as follows:

Start: 8pm local time, Friday 14th July.
Finish: Midnight local time, same night.
Duration of contest: 4 hours.

The contest is confined to the 80 metre band and in the areas specified by the individual licence and authorised power output.

St George Amateur Radio Society Inc. members only are eligible to participate and the contest operates on the principle of "one station one contact".

Scoring is as follows:

Contact with another Society member ..... 1 point.
VK2 contacts..... 2 points.
VK1 contacts..... 3 points.
Club callsigns - VK2LE or VK2ALE..... 4 points.
VK3 or VK4..... 5 points.
VK5 or VK7..... 6 points.
VK6 or VK8..... 7 points.
ZL or DX stations.....10 points.
VK0 or VK9 stations.....15 points.

Contacts using CW score one point extra per contact to the above.

Signed copies of log entries stating that the conestant has complied with the rules and spirit of the contest should be forwarded to:

The Contest Manager
St George Amateur Radio Society Inc.
PO Box 530
Engadine N.S.W. 2233.

Logs should be posted so that they arrive before Friday the 4th of August 1995.

Winners for 1st, 2nd & 3rd positions will be announced at the Society's September monthly meeting.

As mentioned this contest presents an ideal opportunity for non-members to qualify for a St George Award. A brief resume of the award rules are:

All modes and bands permitted, but not through a repeater.

Ten points for an Australian station and five points for an overseas station are required to qualify.

One point is scored for every St George member contacted and two points for the single mandatory contact required with one of the club station nets, VK2LE portable or VK2ALE portable. Multiple contacts do not score.

Entries should be forwarded to the Awards Manager at the above address.

From Allan VK2XF, SGARS Inc. Publicity Officer

Club news: Great Lakes

The Annual General Meeting of the Great Lakes Radio Club Incorporated will be held at the Forster-Tuncurry Adult Education Centre in Lake Street, Tuncurry, on Friday 25th August, 1995, commencing at 7.30 p.m. It will be followed by the regular monthly meeting. Neither meeting is expected to be very long, and will, at their conclusion, be followed by a light supper and informal discussion.

The Great Lakes 2-metre voice repeater, VK2RGL, on 147.375 MHz, continues to be plagued by pager interference, which has been confirmed as a transmitted intermodulation product, believed to originate from two co-sited pagers at Mt. Elliott near Gosford. The SMA has been investigating this problem for some time and advice is expected in the near future as to whether it can be eliminated or a frequency change required.

Our packet UHF transceiver has been repaired and returned to service. Apologies are extended for its absence from the UHF backbone.

The CB UHF channel 4 repeater operated by this club had its masts and aerials demolished by fierce storms on 16th July (sic). Work is now in progress to restore this repeater and also to improve its performance.

Other constructional work is in abeyance pending the issuing of repeater licences applied for at the beginning of the year. In response to a packet request from the NTAC chirman, full details of these applications have again been forwarded and early action is anticipated.

Stan Ellis, VK2DDL

AN INTERESTING ITEM FROM PACKET...

Pactor and C64

Gidday All,

Some time ago I advised that there might be a Software Upgrade
to ,QBF, to allow the Pactor mode to be used with the C64.

Well,I have just been advised by a fellow Amateur in Germany
that the Author of ,QBF, has started on this already and hopes
to have a working version ready in about 2 months time.......

Lets say about September/November.

Anyhow as soon as I get more info from the Author I will place
a bulletin for all to read.

Dont throw the ol C64 away yet!!

73s..Don..VK2DW @VK2DW.NSW.AUS.OC

THANKS TO CLEM VK6CW FOR THAT ITEM

640K OUGHT TO BE ENOUGH FOR ANYBODY -- BILL GATES, 1981

BARTG AMTOR/PACTOR CONTEST JULY 8-9 1995 (CONT.)

EXTRACTS FROM THE OHIO/PENN DXNEWS 030795

5X & 5Z, UGANDA AND KENYA. Paul, 5Z4FO, is currently active from Kenya, but plans to be active as 5X1MW from Uganda when he leaves Kenya in July. QSL via KB4EKY.

BV9G, GREEN ISLAND (TAIWAN). Operators from CTARL (BV8YA, BV8YB, BV8AB, BV8BC and others) will be active as BV0ARL/BV9G, from July 20-25th. Activity will be on the IOTA HF frequencies

and VHF/UHF. QSL via BV8BC and/or CTARL Bureau, P.O. Box 73, Taipei 100, Taiwan, R.O.C..

D2, ANGOLA (UPDATE from Peter). Peter, ON6TT, is planning to use the callsign D2TT or D3T. QSL route will be ON5NT. He will be there July 7th through August 28th and plans to be an entry in the upcoming IARU contest. His bands of activity will be on 160-10 meters, with emphasis on the WARC bands, the Lowband and RTTY. Most of his operations will be on SSB and RTTY, but will take CW requests if the pile ups are not too fierce. This is a tour of duty as telecom consultant for the Red Cross, not a DXpedition. He will be as active as much as he can, but will have to move about in the field a lot. When he is in Luanda, look for him during his morning and evening, and on the weekends. NOTE: Peter will have beacons on 160 and 10 meters. During the day, while he is out, a beacon will run on 28203 kHz. When he is home sleeping, he will run a topband beacon on 1821.5 kHz. The beacons will go:

V V V V V V DE <HISCALL>/B DE <HISCALL>/B

Peter would like to hear QSNs to help him determine when he should be active. Reports can be accepted over the air or send via InterNet to:

ifrclad@angonet.gn.apc.org

Note his name clearly in the message body and PLEASE DO NOT use this address for skeds or anything else.

HG1, HUNGARY. The DX New Sheets report that between July 1st and December 31st, the special station HG100R will be active during the Centenary of the Radio. QSL direct to: HA1KSA, P.O. Box 79, Gyor H-9002, Hungary.

NORTHERN IOTA DXPEDITION. Frederick, VE3VRO, states he will be active July 10-13th, from Banks Island (NA-129), which is located in the Arctic Archipelago Islands Group. He will also be active July 14-17th (only between 0000-0300z) from Herschel Island (NA-193), which located in the Yukon Territory Group.

PY0, TRINDADE. According to the DXNS, Sergio, PU1LOK, is active as PU0TRI, but can only operate SSB on 80 and 10 meters (28300-28500 kHz). He will be on the island until October and will then answer QSL cards. Currently there have been no QSNs reported on the Ohio/Penn Network. QSL to Sergio S. Mendes, Rua Visconde de Santa Isabel, 692 apto. 202, Grajau, 20560-121 Rio RJ, Brazil.

T30, WEST KIRIBATI. Dave, T30DW, has been heard on 14208 kHz around 1200z. He is a native from Australia and will be active for the next two years. QSL to PO Box 29, Bairiki, Tarawa, Republic of Kiribati.

Hi there,

I am looking for a list of VHF clubs in the United States for a mail shot reference my magazine VHF Communications. I am obviously quite prepared to pay for a databse of such information, but can anyone advise me as to where and if such a list resides.

Many thanks in advance.

Mike

I've been following your position with interest. When the Morse code waiver policy became the law of the land, I asked W5YI if there would be an indicator on the license of those who had not passed 13 or 20 wpm. Of course he had no answer because the regulation was new and untested.

Back to your point. If you would like to be tested the same way I was tested (1 minute straight copy), come to the Dallas area. We can arrange it.

The VE system works. Problems occur when the Congress caves to interest groups. I yield the soapbox.

Message-ID: <3tq2v2$q6e@geraldo.cc.utexas.edu>
Source record: 242870

Floydjr <floydjr@merlin.nando.net> says:

>>I am getting ready to take my extra. One thing I will do before I
>>go before any VE team I will ask are there any no code extras on
>>the team. I mean someone who got there extra without taking the code.
>>I am not going to have someone give me a test on something that they
>>cannot do.

I think this is an unrealistic attitude to adopt. Many Extras
who took and passed the 20 wpm test couldn't pass it now. This
is why the test is multiple-choice or fill-in-the-blanks, and it
is why there is no sending test. Many of the VEs could not pass
the higher-level written tests now either, and again that is why
they are multiple-choice tests.

It makes as much sense as asking the VE whether he or she voted
for a particular presidential candidate, or is an NRA member or
is left-handed or a vegetarian.

Good luck with the Extra tests - just make sure the VEs have the
answer keys and you're all set. Ask them about their code ability
and/or political preferences after they have passed you, not before.

|Well then, how in the hell is he supposed to find out things like this
|unless he asks someone?????
|This is the internet, not the home shopping club or your sisters buliten
|board in her kitchen.

Roger is frowning on the previous poster publishing e-mail sent
privately to him without the e-mail writer's prior permission. Get
a grip.

And he had a lot of nerve publishing the identity of the private
e-mail writer while hiding behind an anonymous remailer besides.

My take on private e-mail (I ought to put it in my sig, though):

Normally, posting it _without permission_ is a no-no (I have posted
it several times _with_ permission secured in advance). I feel free
to quote from or paraphrase e-mail I've received as long as the
writer's identity is not given and one couldn't deduce that identity
from the reposted stuff.

However, (this is what I should put in my .sig) - I do feel free to
post any harmful or abusive e-mail I receive, and have done so on
occasion. By sending that kind of mail to my personal mailbox one
forfeits any consideration as a civilized person.

Many people that under no circumstances should private e-mail be
posted without permission; I make the one exception.

|I don't understand this. ALL extra class ops must take and pass a 20 wpm
|code test. If they cheated, I am with you, get their rear ends out of
|radio. But, hey, all the extras I know have taken the 20 wpm code test
|and passed, even if they later didn't use it and forgot!

People who qualify for a medical waiver still have to pass a 1A code
test, 5 wpm. The waiver only exempts them from needing to pass 13
or 20. So yes, there are extras who have only passed 5wpm,
presumably for a good and sufficient reason (and I suspect Floydjr
owes them an apology). There are no extras who have never passed a
code test.

|>feel that there should ever be a link between VHF and HF. Plus you now
|>have a no code tech operating in the bands most of us worked hard to get

|Well, again, sure, I understand, but if a kid comes to MY station I am
|going to put him on 20 to work some DX on SSB to GET HIM INTERESTED in
|UPGRADING! It is not all bad, at all.

In at least one circumstance I know of it's perfectly legal for a
technician to work HF; the late lamented 440 - 10m linked repeaters
W1OJ used to run were a great way to run DX from the car; since the
link was at the repeaters and W1OJ was responsible for the
transmission on 29 Mhz, it was perfectly legal for a nocoder to work
stations on 29 Mhz. This is separate from what constitutes contacts
eligible for awards; repeater contacts usually don't count for some
things.

BUDDY10 <buddy10@aol.com (BUDDY10)> wrote:
|Can someone explain these two terms to me as they apply to CW operation ?

I won't talk much about "netting". Zero beating is the term used to describe matching your transmit frequency to someone else's; presumably, that means if she is listening on the same frequency that she's transmitting on, you'll be dead-on frequency when you send to her. This assumes that both your radio and hers are correctly set-up so the pitch of the sidetone you hear when you transmit CW matches the frequency offset you are listening to. Most modern radios take care of this automatically. To zero beat, you turn off transmit and then key some dits or steady tone (you don't want to transmit this, just generate sidetone), and then adjust your frequency till the sidetone "zero beats" or exactly matches the received signal. Then turn transmit back on and you're ready to begin transmitting when appropriate.

The connection with nets as I understand them is that everyone wants to be on the same frequency (unless two ops go off frequency to exchange some traffic), so you might zero beat with net control and use your RIT/Clarifier to listen to other operators. When a net starts, control will often start out with a series of V's to give everyone a target to zero beat with.

Hope this helps.

I did not mean the VE had to be able to pass a test then. I have no problem with any VE who has passed the test at least once. Most likely after I pass it I might throw my key away. The ones I meant are the ones who get a doctor's waiver and have never passed more than 5 wpm test. These are the ones I will not take a test from.

I know this is a little silly but would take a test to fly an airplane from someone who can't fly.

I do agree that there are people out there who deserve a waiver from elements of the test. To those people I will say I am sorry. But most likely those people are truly disable and will not be involved in the VE program. We recently has a local ham get his extra in this manner and wants now to start a VE team. These are the people this post was directed at and I will apoligized to the turely deserving ones of the waviers.

579. Callsign server @ U Arkansas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-10 00:00:00 UTC
From: shreed@MCS.COM
Message-ID: <3tr6id$ikj@Mercury.mcs.com>
Source record: 242882

Does anyone have the telnet address for the callsign server at the
University of Arkansas? I've misplaced it. It seemed to be more
up-to-date than the Buffalo server.

Tnx.

Hi - wonder if anyone has any experience of the FT690 6m rig?

In particular, what you think of the receiver
what modes are covered (SSB, CW and FM???)
believe it is 3W output???
approxamate size???

Any comments here or direct would be appreciated.

After all the comments from Roger and others about the propriety, legality, etc. of posting private email in a public forum, there are a few things some of us are apparantly forgetting.

If you send me a piece of First Class mail, it is MINE once I receive it. I may do with it as I wish. Period. No matter how personal or private, it is MINE, and if I wast to rent out the TImes Square lightboard and have your letter displayed at rush hour, I can do that.

Unless certain personal communications fall under the protection of ethics canons (ie. attorney-client, doctor-patient, clergy-parishioner, etc.) there is NO protection under the law. None whatsoever. Unless you copyright your letter to me, and clearly indicate so, you're out of luck.

Bad form to republish - maybe. That's my problem, and yours. It's NOT the problem of EVERYONE else who gets mail through the Post Office.

Get the point?

I'd like to abuse a 'normal' VHF (TH-22AT) to communicate with
a yacht on a upcoming sailing trip.
Where can I get information about what frequencies are the equivalet
to the marine channels ?

I would like to make one comment to what someone else posted.

The word has finally come up and I was wondering how long it would take. The nasty word "CHEAT". A person stated that the VE could be there just to make sure the other examiners did not cheat. I only have one question to that. If they cannot copy the code how do you know they did not cheat. Be the same thing if they gave the written in spanish to some people.

You won't get thrown off of repeaters if you use your radio courteously and correctly. If your story is true you could explain the situation. The repeater users would probably be glad that the "big Jammer" no longer has his radio. There are ways to change the "fingerprint" of a radio but based on the non-credible tone of your post I don't think I want to tell you.

Robin: The FCC issued a Memorandum Opinion and Order in FCC 93-410, 8 F. C.C.R. 6413 on September 3, 1993 entitled

IN THE MATTER OF
FEDERAL PREEMPTION OF STATE AND LOCAL LAWS CONCERNING AMATEUR OPERATOR USE OF TRANSCEIVERS CAPABLE OF RECEPTION BEYOND AMATEUR SERVICE FREQUENCY ALLOCATIONS.

That Opinion was in response to an ARRL Motion for a Declaratory Ruling requesting that the Commission preempt certain state statutes and local ordinances affecting transceivers used by Amateur Radio Service licensees. The laws referenced by the ARRL prohited the possession of such transceivers if they are capable of the reception of communications on certain frequencies other than amateur service frequencies. On March 15, 1990, the Commission released a public notice soliciting comments, and on September 3, 1993, issued a Memorandum Opinion and Order.

That Order (some 24 pages) stated:

CONCLUSION

13. "We hold that state and local laws that preclude the possession in vehicles or elsewhere of amateur radio service transceivers by amateur operators merely on the basis that the transceivers are capable of the reception of public safety, special emergency, or other radio service frequencies, the reception of which is not prohibited by federal law, are inconsistent with the federal objectives of facilitating and promoting the amateur radio service and, more fundamentally, with the federal interest in amateur operators' being able to transmit and receive on authorized amateur service frequencies. We therefore hold that such state and local laws are preempted by federal law."

Thus, state or local laws prohibiting the possession of receivers capable of monitoring police or emergency frequencies do not apply to amateur radio transceivers with wide band frequency coverage in the possession of licensed amateurs. Carry your FCC licence or a copy.

: >where I might find a copy of this law?

: There is no such law. Most State anti-scanner laws have exemptions
: for amateurs. I believe Kentucky was the most recent to add that
: feature to their anti-scanner law. However, in some cases local
: jurisdictions also have anti-scanner laws, and some do not offer
: a waiver for amateurs.

: Only criminals, and news reporters (same thing, profiting from radio
: intercepts is a violation of CCA'34), have a need to monitor police
: calls from an automobile (so the thinking goes). Are you wanting to
: be the lookout man for a stickup gang? Or are you just a voyeur who
: wants to be on the scene (and in the way) of police busts? In either
: case, the police don't want you listening.

: Gary

Okay...this is related. I suspect that the statement about "scanners"
per-se, is correct. However, there is a FULL FCC FEDERAL PREMPTION for
amateur gear that can receive outside of the amateur bands. All state
laws banning the possesion of such equipment are null and void.

So, if the arguement is that this gear can receive my police channels,
so I get to confiscate it.. Nope. This is what we ARE protected
against.

Now, as has been pointed out by previous posters, convincing the local
cop on the beat that such a thing exists is another matter. It might
take a trip to court, or at least to the guys supervisor with all of
the required documentation to convice them otherwise.

: where I might find a copy of this law?

Sadly, there are places in which legislators with sloping foreheads think that they can control the populace by making everything illegal. There is no such federal law, and there are a couple of states, many counties, and many, many cities in which dementites in need of Ex-Lax (tm) create boneheaded laws. There are no current federal laws which restrict the use of scanner (amateur or not), but you can receive additional penalties if you use such in the commission of a crime.

Some law enforcement agencies even choose to ignore selected portions of their own laws. For example, Minnesota has a law banning the mobile use of scanners, but with an exemption for amateur radio operators. Two years ago, a fellow Californian was pulled over on the highway there (for no apparent reason), and had his scanner confiscated despite his immediate production of his amateur radio license as well as a copy of that state's law. Despite many letters, phone calls, promises, and so forth, he still doesn't have his radio back. This is not the only case of the abuse of this law.

I suppose that the best thing to do if you get pulled over in such a locale and your assault radio happens to be visible is to push the "WX" button. I wonder how they would handle trunk mounted radios? (Shudder!)

"VE" means "volunteer examiner". In other words, someone who gives
up his or her time for amateur radio. Assuming this person is an
honest VE, I'm not sure what the problem is, since all laws have been
fulfilled.

Of course, with flames like this already directed towards the individual,
you have to wonder why the individual wants to be a VE...

: No-Code Extra? Perhaps someone who got a waiver because of physical
: disability?

There actually isn't any such creature as a "No-Coe" Extra. In order to
get the waiver for the 13 wpm and 20 wpm tests you STILL have to *pass*
the 5 wpm test, and are supposed to *attempt* the 13 wpm and 20 wpm
tests, including with all the adaptions that they are allowed to make.

So, there are 5 wpm Extras, but no No-Code Extras.

DC.

Not true

>More accurately: it's virtually impossible to eavesdrop on a *digitally-
>encoded* 900 MHz phone. If the manufacturers choose to make the 900 MHz
>transmissions "in the open", or speech inverted, eavesdropping would be
>simple and possible.

Yes speech inversion is simple & very possible but I take exception
to the previous statement, "it's virtually impossible...*digitally-
encoded* 900 MHz phone." Impossible? The base portion of the phone
does it so doesn't it follow that some other properly configured
device could do the same? I believe so but of course I don't speak
from experience on this one, that would violate the EPCA.

To answer the original question no it is not impossible. Different
900 MHz phones use different technologies. Some can be heard by
a typical scanner, others can be heard but with more effort required
to do so and some are extremely difficult or just not figured out yet
but I would NOT say impossible. The safest thing on any phone that
is not wired to a wall is to always assume that someone is listening.
Just don't bad-mouth the neighbors or give out vital info.

Wilson was the one who professed "undying love for the ARRL", that is NOT a
term you use for a ham radio organization. He may be all you say. But
his comments portrayed otherwise.

Wilson professed "undying love for the ARRL."
That is a term best reserved for a REAL loved one, a human one.

Get the all mode rig. The exciting part of six meters is on
SSB and CW. In nearly every part of the U.S., six meter FM
is useless. With SSB and CW, you can work DX during sproadic-E
openings, try meteor scatter and even EME.

No argument. If some weenie wants to post e-mail to the net, to the best of my knowledge there is no way to stop him, and I'd be the last one to try.

Such things, just like good operating practice on the bands, are best left to peer pressure. Which, by the way, is what I was trying to exert when I posted my message condemning the practice.

Digital way down to the bottom end of the band? I am afraid my
license already allows me to utilise discrete signaling methods
such as A1A and F1B all the way down to the bottom (modulo the
bandwidth of the signal) of HF bands.

"Digital" has always been with us. It just happens that in the
age of computers, F1B has become accessible to more hams.

Where will it end? Only when Amateur Radio is no longer allowed
on the HF spectrum. Otherwise, progress will occur, however slowly.
We read of OTs who lament the loss of spark privileges. Well, such
things do happen to outmoded techniques.

TO: Any Radio Dealers(Oregon/SW Washington)
RE: RELM's WHS-150
FROM: woody1@teleport.com

I belong to a non-profit organization who is in need of
aquiring 3 Relm radios, model number whs-150.
My organization is not "tax supported" by anyones
income or property taxes.

Sources indicate that these radio's can be obtained
from the factory distributor for around $284.00 each.

Pending purchase aproval I would offer $950.00 for three
transceivers. S&H would be considered.

I know this is not big money to some and could be
considered "serious charity". If you are a dealer and
would be willing to assist my organization it would be
greatly appreciated.

We have the identification and authorization required to
purchase these radio's for someone who would require it.

Your charitable contribution is appreciated.

Please respond to via E-Mail to woody1@teleport.com

Code doesn't come all that easy to some. It took me 2 years listening to code tapes morning and night to get my 5 wpm. When I wanted to study for 13, I used a code program that would send from scripts that included speed control words. I set up a program to generate 5-letter random groups and write them to a file. I edited the file to send 1 minute at 40, 1 minute at 35, ... 1 minute at 20, and 5 minutes at 15 wpm. Of course I couldn't copy anything for the first few months.

After a while I started to get 30 to 40% at 15 wpm and a little at 20. By the time I was copying 15 well, I wasn't doing all that bad at 20. The advantage (for me) in this method was that 15 (and even 20) wpm started sounding pretty slow after coming down from the higher speeds.

If I had just stuck with it for a few more months, I'd be an extra now. :-) 73!

Well, that explains it! Should have recognized the footprints of good
ol' Herbie in this one somewhere.

In any event, this is a very specific case with a long and contoversial
history and is certainly no indication that the FCC routinely hassles
folks who have had a prior generic bout with the legal system.

We did that with our last two incidents, in January and March, with respect to the floods in California. It made for very efficient communications, but it did catch a few people off guard that didn't know if they were getting through. But that's what a net control is for.

What really gets people, though, is decode. We have to have it on because of local use of the repeater pair from up north. Whenever I turn off the repeater during an ARES net, just to see who comes up on the output frequency to continue the net, I will invariably get a few that never knew what hit because we everyone came up on simplex and no PL. Nothing to decode, nothing to hear!

Good thread, Joel. Got any more, anybody?

> code test.

There are no true "No code extras". This obviously refers to the
situation of someone who passed a 5 wpm code test, got a physician's
waiver for the 13/20 wpm code tests, then passed all the written elements
and got an extra class license. There are a few VE's around who fit this
situation; in fact, a guy who passed his "extra" class exam this way
at a VE session I was involved with is now a VE and heads up a team giving
exams in the Lake Ozark, MO area. As a VE team leader who has been involved
with at least 75 exam sessions over a 6-7 year time frame, I too have
concerns about such people giving CW exams. The VE scheme is basically
set up so that non-extras can administer elements relating only to
licenses below their own, and cannot give elements they themselves have
not passed. I think that, since questions about CW elements DO
occasionally come up, that CW-waivered VE's should not be giving CW exams.
Unfortunately, there is no way for the VEC's to know who those people are,
since their licenses do not indicate that they were waived from their CW
requirement. A valid point is being made here, but the solution being
proposed is basically unenforceable, unfortunately.

> likely those people are truly disable and will not be involved in the VE
> program.

The law relating to disability waivers does not define the types of
disabilities that qualify. All it takes is getting an MD or DO to sign
the back of the 610 form. We have in our area a VE who got his license
this way (at one of my club's exam sessions, BTW), who now heads up an
exam team in an adjacent town. His disability has no impact on his
ability to copy CW or to get around, but he was able to get a waiver
anyway. As a physician (and a VE team leader) I knew all this but the law
does not allow VE's to question signed waiver forms so I had to let it pass.
Furthermore, the VEC's have no way to tell who such people are due to
their licenses not indicating that they were waivered out of their CW
exams. But to state that they "will not be involved in the VE program" is
a grave error as many of them are.

627. Programming a message into CMOS-II keyer

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-11 00:00:00 UTC
From: dfjenki@ibm.net
Message-ID: <39n0maNLbPzU079yn@ibm.net>
Source record: 242630

I built a CMOS-II keyer some months ago, and just this morning decided to store a CQ message in its memory. Using the 'C' load mode and Auto-space ON, I entered all the characters, and then played it back. Thence ariseth the following problems/questions:

1) If I pause for even a few milliseconds (it seems) between letters, I get the keyer's 'I' response, and therefore when I play the message back, I get a word gap between the two letters.

2) If I key fast enough to escape the unwanted 'I', when I play the message back the letters almost (but not quite) run together. Certainly, they are closer together than one would hear from over 95% of the keying that's present on the bands I visit.

Questions:

In character load mode, how can I avoid this problem? (I would like to avoid using 'R' recording mode for the time being.) I have tried using Auto-space OFF, and that seems to help some, but I'm not really sure I understand this mode. For instance, the documentation says that Auto-space OFF "...character spaces are determined by the operator.) Apparently this is only true up to some limit, beyond which the progamming decides that a words has ended - true? If so, what is that limit?

If one is keying fast enough to make the keyer think that a word space is not required, how does the keyer recognize the break between the end of one character and the start of another?

Any CMOS-II recording tips from the group would be aprreciated. Thanks.

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
July 16th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

I can't hear it here in San Diego. I think it's being swamped
by the 146.64 repeater.

Could you maybe swing the antennas a little more to the west so
it will be stronger in Southern California?
Or would around-the-world to the east be better?

Thank you!

My ATT9100 uses digital audio sent via WBFM. Essentially impossible to
monitor.... unless you build a decode with a fairly common MC3418 and
attach it to your receiver.... listening on a conventional analog
NBFM receiver you don't hear anything.

Brian,

I recently purchased the Kenwood and so far have nothing but praise for it. It seems to be a tough radio, that has some interesting features. QST gave it fair reviews, commenting only on the fact that there is no squelch knob, rather it has a squelch mode, and turning the multifunction knob controls this. In no way do I find this an inconvience. I traded out an old Yaesu FT-470, and have been happy since.

I've only found one mod on the radio, but it also includes some handy notes about its use as a control radio for other kenwood mobiles in cross-band mode. I do tend to lean towards Kenwood, owning 4 radios of various bands, so I guess mine is a biased opinion, but I like it.

There is an ongoing case now involving the renewal of license
of one H. L. Schoenbohm, KV4FZ. I understand he was convicted of a
felony regarding possession of telephone access codes. As some of you
may know, he has been very controversial for many years. There are
many, many good hams who are applauding the FCC's action in this case.
We only wonder what took them so long.
The hearing is scheduled for Aug. 8.

The 1995 Duke City Hamfest will be held at the NM National Guard Armory, 600 Wyoming Blvd. NE, Albuquerque, NM on August 26, 1995. The Armory is approximately .75 mile south of the intersection of Interstate 40 & Wyoming Blvd. Talk-in on the 147.15 MHz repeater (no pl, open, +600 KHz Tx). Pre-paid set up is after 6 PM MDT, August 25, 1995 (Friday). Doors open to the Public @ 7 AM MDT, on August 26 (Saturday). Free admission. Indoor tables are $10.00/each, prior to August 21, 1995. Free tailgate, on a first come, first served basis, in the west side parking lot of the Armory. There is no overnight camping or parking allowed, at the Armory.
All indoor table reservations must be accompanied by a check ($10.00/table, a mix of 6 & 8 feet in length). The ARRL Forum will be presented by KA1CV, Ed Hare. His talk will be on Electronic Troubleshooting, or as we like to say in the Southwest, "Shooting the Trouble, with Electronics" ;)
SASE for a flyer to the Duke City Hamfest, P.O. Box 6552, Albuquerque, New Mexico 87197-6552 (Same place to send the indoor table reservations too).
WA6ITF will be making his annual "fill me with green chili" trip to Albuquerque.
VE Exams are by pre-registration only (limited to 50 People).
Contact Bob Witter, AA5MK @ 505-292-3218, to pre-register.
By voice, information only, 505-821-2771, Ray & Robbie Hill, via the internet: wa5whn@rt66.com .
Hint: Since this is the peak of the Tourist Season, there are very few vacancies, therefore, we are not allowed a group discount, on Hotels/Motels.

>I've had a ground rod installed in a location for about a year, and
>now I'm moving. I'd like to take the ground rod with me (ten bucks is
>ten bucks, after all), but I'm not sure the easiest way to get this
>rod out of the ground! Can anyone offer suggestions?

It's usually better to spend the $10 and buy a new rod rather than
trying to retrieve the old one. If it's well set, it's going to be
a bitch to remove, and if it's been there a while the copper plating
is probably corroded anyway. If you must try, use a Hi-Jacker, a
stout chain, and the wire clamp as a chain anchor. It won't come
easy, and you may need a sledge to rock it side to side a bit to
make it come at all. I've totally stalled the hydraulics of a 4020
John Deere trying to lift out an old rod. I normally just cut it
off below grade and leave it.

>I'll be installing the rod into a new location. I got the first rod
>into the ground with brute force; can anyone give some ideas on what
>might be easier ways to get a ground rod into the earth?

Here I can help. The easiest way to set a rod is to dig a hole about
the size of a quart jar, a post hole digger is handy. Then pour the
hole about half full of water and start churning the rod up and down.
It will quickly start to sink into the ground. Add water as necessary
to keep the hole about half full. It should take less than 5 minutes
to sink the rod all the way. Now let it set undisturbed for a day or
so until all the water is absorbed and the mud has settled down the
hole around the rod. It should be really tight at this point, and
ready to be connected.

I've been setting rods this way for 30 years, after an older electrician
showed me how. It's lots easier than trying to dry drive a rod, and makes
a better connection to Earth to boot.

Gary

More accurately: it's virtually impossible to eavesdrop on a *digitally-encoded*
900 MHz phone. If the manufacturers choose to make the 900 MHz transmissions
"in the open", or speech inverted, eavesdropping would be simple and
possible.

640. Ex-felon licensee // Amateur Radio Newsline #934 07 Jul 95

> for any law.

This might answer the question as to whether an ex-felon can earn
an amateur radio license. It depends. Upon what? Probably upon
how severe the felony, whether he's still on probation, his
past criminal record, and who knows what else.

I doubt that Charles Manson (if he ever gets paroled) would be given
a license. Besides, who'd want to have a QSO with him?

Ex-felon - it sounds like an oxymoron!

>are welcome. Thanks.

The FCC does not ask on its application about criminal records. However,
amateur licenses are normally available only to citizens or aliens legally
in this country. A felon has his citizenship rights restricted, IE he's
inelegible to vote, hold office, own firearms, etc, unless his rights have
been restored at the end of his sentence. This restriction also applies to
Federal licenses of all kinds, not just radio licenses. (The FCC doesn't
normally check for this sort of encumberance, but if they find out, they
will revoke the license.)

Your friend may petition to have his rights restored, for state felonies
this petition often goes to the governor's office, for Federal felonies,
a private bill in Congress is required. These are usually rather routine
matters unless the felon is notorious. Your friend's lawyer should have
advised him on this process, and may indeed have already done the necessary
filings. If so, your friend has had the vote restored to him (the most
visible encumberance), and may confidently obtain a Federal license.
If your friend can not vote, then his rights are still encumbered, and
he will be running a risk if he applies for a Federal license. If he's
still on parole, this may also be a parole violation, and might land
him back in the slammer.

Disclaimer: I am not an attorney. This advice is worth only the
photons it produces on your screen. Consult a lawyer for a definitive
legal opinion.

First of all there are no waivers of the 5 WPM requirement.
The higher speed can be waived but not the 5 WPM. I don't
know about other VECs but the ARRL does not allow Extras with
waivers to give the code portion of the exams although they can
give the writtens.

This urban legend of the no code Extra is more of the CW forever
paranoia. The world will not end if every ham cannot do 30 WPM
in his/her head while SCUBA diving.

Don't worry there will not be a no code Extra testing you.

644. Seeking Information on J-38 Keys

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-11 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <3tu1nk$3re@orion.aoc.nrao.edu>
Source record: 242703

The Socorro Amateur Radio Association will be operating Special Event Station NA5N this weekend to commemorate the 50th Anniversary of the first atomic bomb explosion at Trinity Site, 36 miles southeast of Socorro, New Mexico.

On Sunday, July 16, we will be operating from Trinity Site itself, which will be open to the public for the anniversary. There will be thousands of people visiting this site, and we will be operating very much in the public eye -- an excellent opportunity to publicize amateur radio. We are assembling a small collection of World War II vintage radio equipment for display. This collection will include keys and bugs. Each piece of gear will be accompanied by a description, and I am seeking information for the description of the J-38 key.

I presume that the J-38 specifications were prepared by the government, which then invited manufacturers to bid on contracts to produce the keys. I would like confirmation of this as well as the following information:

o When were the specifications/design prepared?

o What were the dates of manufacture of J-38s?

o How many J-38s were produced?

o How many companies produced J-38s?

o Was there any theater of war or major operation that did NOT include J-38s?

o After the war, what were the typical selling prices of surplus J-38s in ham stores?

In addition, if anyone has any particularly exiting story about J-38s in combat, I would like to hear it.

Thanks in advance for any help. The crowds that watch us operate our special event station will include a very large percentage of unabashed history buffs who, I am sure, will appreciate any details we can provide.

By the way, the operation at Trinity Site will run from 1100-1700 UTC Sunday, 16 July. We will be in the General CW and phone portions of whatever HF bands are open. There will be QRP CW operation on at least 40 and 30 meters. In addition, NA5N will be in operation Saturday, 15 July. Amateurs contacting the special event station should send QSL and business-sized SASE to the Socorro Amateur Radio Association, Trinity Site Event, P.O. Box 522, Socorro, NM 87801.

645. D104 microphone Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-11 00:00:00 UTC
From: n4lq@iglou.iglou.com
Message-ID: <DBK37F.43D@iglou.com>
Source record: 242704

I have a microphone that looks exactly like a D104. It has the squeeze switch. In the bottom is an amplifier which run on a 9 volt battery. On the back of the microphone is an eagle. It's all chrome. No markings of any kind. This obviously must be an Astatic look alike but has anyone any idea who made it?

No code liscense is available for operation above 30 MHz. I am curious
why you are taking these polls and if you think the ARRL and the rest
of us in the Amateur community would care about receiving questionable
polling results?

From: ac742@FreeNet.Carleton.CA
Message-ID: <DBJzMH.9yy@freenet.carleton.ca>
Source record: 242706

I am looking at getting a 6 metre rig. While it certainly depends on personal interest, how really useful are the other modes, other than FM, on 6 metres? A 6 metre FM only rig is a couple of hundred dollars less than an all mode.

Thanks for any views you can toss my way.

What you have is an Astatic Silver Eagle Mic. Very popular in the CB SSB
operators in the mid 70's. The average Hamfest price can range from $30-55
depending on the condition. There should be a tag on top of the mic stating it
is a silver eagle. If that is missing the value drops a bit. They are quite
sensitive and I have been using one on SSB. (Picked it up at an estate sale
for $15!) The problem is they pickup almost any noise in the background. If
you use it you will have to turn off the 2 meter rig in the background or you
will find it was re-transmitted.
Hope this explains the Silver Eagle,

73, Mike KB9KFE

Don't forget that bad form is simply bad form, and unless some of your
legal cohorts wind up with too much time on their hands, I hope it'll
stay that way. (I happen to agree with you, by the way, but I except
anonymous mail.)

> Someone else here on Usenet pointed out that the chap that did this did not
> identify himself, but instead hid behind an anonymous identification.

And did a pretty lousy job of it at that. From his "anonymous"
message:

| The best suggestion ANYBODY can make is for him to forget becoming a ham
| radio operator.
| ...
| As far as I'm concerned, he can put his wish where I'm not allowed to say
| on here!
| DE KB0OXD
| an308228@anon.penet.fi

Going on the assumption that KB0OXD really wrote that message, a quick
look at the callsign server followed by a run through Four-11 provided
plenty of information. Just don't sign the guest book on his home
page. :-)

>where I might find a copy of this law?

There is no such law. Most State anti-scanner laws have exemptions
for amateurs. I believe Kentucky was the most recent to add that
feature to their anti-scanner law. However, in some cases local
jurisdictions also have anti-scanner laws, and some do not offer
a waiver for amateurs.

Only criminals, and news reporters (same thing, profiting from radio
intercepts is a violation of CCA'34), have a need to monitor police
calls from an automobile (so the thinking goes). Are you wanting to
be the lookout man for a stickup gang? Or are you just a voyeur who
wants to be on the scene (and in the way) of police busts? In either
case, the police don't want you listening.

Hello! I wrote the 2/93 QST article. I also rewrote the Station Setup and Accessories chapter in the 1995 ARRL Handbook and the interfaces are in there too.

I haven't dealt with a TS-50 yet, but I believe they are like the old 940, etc. in that you have to buy something that goes inside the radio AND an interface like I wrote about. Sigh.

>>dirty men to sit on their butts. There are exceptions but they are
>>EXCEPTIONS.

Let me relate an "EXCEPTION", to use the constructive :) term from the
previous paragraph. At approximately 6:40 PDT this morning, my carpool was
making its daily drive through the Angeles National Forest (LA, CA area) on
our way to Pasadena on the Angeles Forest Highway, when we noticed immediate
slowing ahead around a sharp turn. It seems that some poor fool had the bad
lack of sense to try passing another car over the double yellow on a turn and
ended up rolling his BMW into a ditch off the side of the road. The person
driving my carpool has EMT training, so we stopped to assess the situation.
About 6 cars had already pulled over at the scene (mostly rubber-neckers) and
one man was holding a cellular phone. When Derek (the EMT) got out to check
on any victims (one had facial lacerations), I asked the cell phone user if he
was able to contact any emergency personnel. He said that he tried 911 and
was cut off twice when he couldn't hit any cells. This part of the forest is
pretty cell-lean. However, there are at least three 2m amateur repeaters that
are reachable, since they are on mountain tops, so I asked if there was
anybody on frequency who could call the highway patrol for a traffic accident.
As it turns out, there was since the local repeaters usually get alot of

traffic during rush hours, and I was able to get someone to relay the information to the CHP and ambulance personnel.

This road is only lightly patrolled, and public phones are not very frequent, nor are there any call boxes along the route. Sure, there are alot of people that drive the route who have cellular phones (This is LA County after all :)), but they are quite useless in the remote portions. I'd have to conclude that amateur radio made the difference between minor medical attention being needed and a longer wait for response causing more serious injuries to develop in the victim of this accident.

Just my $0.02 (and a good excuse for being late for work today).

Where do you get this stuff from, Gary? Immature citizens have the exact
same restrictions on voting, holding office and owning firearms. Do they
also fall victim to your ideas on FCC licensing? Maybe whatever was in
your "etc" would have made your point better.

Your proposition that FCC amateur licenses are "normally available" only
to legal residents flies in the face of the regulations and of the facts.
U.S. amateur radio licenses are wholly available to forign visitors and
indeed, through V.E. sessions abroad, also to forign non-visitors. The
sole exception in the regulations is that of representatives of foreign
coutries, whetever they are. (Diplomats and spies, I guess?).

The FCC does have the power to suspend and revoke licenses but I know of
no right to refuse one's issue. And I would suggest that their sole valid
ground for revoking or suspending a license would be a history of conduct
which gives an FCC adminstrative judge good cause to suspect that the
license will be misused under its terms. I think your average convicted
drug-dealing homicidal bigamous tax evader can happily enjoy his dx along
with the rest of us. Wire fraudsters and computer hackers need not apply.

Second Saturday of each month, IEARC Swapmeet at A.B. Miller High School in Fontana.

Third Saturday of each month, DeVry Tech in Pomona, near the intersection of the San Bernardino and 57 freeways.

TRW is the ->last<- Saturday of each month (not fourth!) at their facility near LAX.

All swapmeets start ungodly early, like 7 AM. If you don't arrive early, the best gear that individual sellers have will be gone. Some pretty much break down by 10-11 AM.

|> The higher speed can be waived but not the 5 WPM. I don't
|> know about other VECs but the ARRL does not allow Extras with
|> waivers to give the code portion of the exams although they can
|> give the writtens.

This is not true. It is up to the ARRL accredited VE team how
they want to use any examiner. From the VE manual (ARRLVEC)
seventh edition, page 15:

The FCC allows VECs to accredit handicapped licensees to become VEs.
The FCC stated, that although VEs might be competent to administer a
20-WPM receiving test where the message is sent by a tape player and
the content of the message is known by the VE, a VE who does not have
the skill to receive Morse code sent at 20 wpm, for instance, is not
competent to administer a 20-wpm sending test because the VE cannot
receive the message sent by the examinee.

On page 16: If a VE team plans to use the services of a handicapped
person, the VE team may determine in which ways that person's assistance
is accepted. For example, if a VE team is not comfortable accepting
the participation of a VE who is not competant to receive Morse code
messages sent by the examinee, the team does not have to accept the
services of that VE in administering Morse code examinations in that
manner.

End of quoted material.

Whether you like it or not, thats what the book says. Nowhere that
I can find does it say that a VE who never passed 1C is not permitted
to administer 1C. I wouldn't want him giving ME the test either...
but it is permitted.

Depends. There are two kinds of 900 MHz phones. The ordinary analog
phones can be scanned. The digital SS phones cannot (at least not
without additional equipment).

No, I am in Thomasville, NC. The repeater I am speaking of is the 147.00 machine. It is linked to a 10 meter repeater also. But it is also linked through 220 or 440 to 10 -160 meters. You will hear no code techs in the advance portion of every band on it. Some ID that they are operating through a remote base and others don't. What happens when you work one and look up the call in your database and it shows no code tech? I just do not feel they have earned the right to work in these portions of the spectrum. I worked hard to get the right operate there and feel it is unfair they are allowed to do it. Now if your license means no more to you than that then I guess thats OK. As I stated this is IMHO. I was hoping to find some other hams who felt the same way. Thanks for reading this.

>for around that price($1000.00) ?
>

Scott,

(I assume you mean an HF rig:) If you are reasonably sure you'll stay
in the hobby, get the best radio you can. Your enjoyment (and hence
likelihood to upgrade) will be much enhanced. Personally, I like
having a transceiver with a general coverage (ca. 100 kHz - 30 MHz)
receiver; then you have an excellent SWL radio as well.
For ca. $1000.00 you should be able to get a very clean, used
Kenwood TS440 or Icom 735 (I think that's the number of Icom's
roughly equivalent rig), etc. These are entry or mid-level
radios which are only about one generation old.

Amateur Equipment Supply (AES) lists some used gear in their
(otherwise) new equipment catalog (it's free), although it's likely to
be more expensive there. Get a copy of Ham Trader or some other
newsletter that lists used equipment, or better yet, find out
if there is a swapnet in your area, or a hamfest coming up soon.

Take a veteran with you when you shop. Few hams will try to rip
you off, but it is easy for a newbie to buy something that really
isn't the best thing for them. Most hams love to "spend someone else's
money," so I think you'll find a volunteer!

This really buggs me. ABOVE or *BELOW* in terms of frequency
in MHz or meters. To me any frequency less than 30 MHz is
pretty low, but it's refered to as High Frequency. Maybe Ray
meant above in terms of meters like uh, 160m is "above" 10m???
Very frustrating but I'm getting the hang of it.

I think the rumor started because some states that have mobile scanner
restrictions exempted amateurs. Not because we are better or something
(debateable) but because some amateur radios can recieve police
frequencies. The point being that they wouldn't confiscate an
amateur radio tranceiver that can recieve the police. I don't
think the exemptions apply as a blanket, which would include
the exemption for scanners, but specifically to trancievers. I think
if a state confiscated a tranciever that could recieve police
frequencies you could eventually get to a federal court and win.

Well in the scenario you put forth, since the examiner isn't the one driving it wouldn't matter if they had no arms and legs, as long as they are capable of judging my ability then I see no problem in their being an examiner.

So coming back to the requirements for a code-examiner, since they have the correct answers in their possesion it wouldn't matter what speed they personally could copy at, they could still evaluate your ability at any speed.

Now if it were to become a sending test, then you have a point there.

Knowing that the previous user has 'cleared' may be helpful to the person
waiting to make a transmission, but holding off out of courtesy.

^^^^^^^^^^^^^^^^^^^^^^^^

An on-road driving test bears no resemblence to a Morse code test.
In an on-road driving test, an individual is closely examined for
basic driving skills. In a Morse code test, you either copy the
information adequately or you don't. A computer (void of any skill)
can give Morse code tests; the only need for a human observer is to
make sure the examinees don't cheat.

Hi Greg,

How usefull is amateur radio? or how usefull is FM?

Well to answer the question properly, only with ssb or cw you can
make efficiently DX contacts and enjoy the very special propagetion
on this band. In the summer there are lots of contacts in the 1000 to
2000 km range, with some lucky stations catching intercontinental DX.

I guess I am missing something, but in the dark recesses of my mind I seem to remember a rule concerning signing at the end of your transmission, I guess if you call someone and give your sign it could be assumed that was the end of your transmissions.

Of course I could take this the otherway and say this is a carryover from the CB'ers who always had cute ways of claiming they didn't make a contact.

I also think it is just a good practice. If I hear someone I enjoy speaking to, and they call another call, who doesn't answer, I often times will call them after a minute or two, provided they do not say they are clear after not making a contact. If they say they are clear I don't take up the airwave calling.

I don't consider this near as offensive as Hams who insist on using CW shortcuts on voice. What is your QTH, why not say Where are you located. I always felt this was just a way for the OT to make the novices feel uncomfortable, or for the Novices to show how smart they are, in both cases wrong. The 'Q' abbreviations are for CW. What is my signal like makes a lot more sense than asking for your RST on SSB, how does that tone sound anyway.

I can't believe I am acutally responding to this thread, must be really bored today.

There's also a book out called the _U.S. Repeater MapBook and OPEN Listings_ published by Artsci, Bill Smith (N6MQS) editor/author. The maps aren't pinpoint accurate (I found several errors in placement) but they are in the general area and let you know about what they cover. Includes freqs and offsets. Includes a CD-Rom with a Ham Callsign Database and I think it might have the Open Repeaters on the CD-Rom as well. Not sure as I haven't accessed the CD yet.

I've looked thru it and it's OK. May be what you want. It also covers Canada and Mexico, but I've no idea how thoroughly. Looks to be about in the same detail as the state maps.

I'm not associated in any way with this book or its publication, it's just one I'm aware of that may answer the original query to some extent. Granted its not an on-line db, but it is a paperback listing. Cost was $29.95.

FWIW: from the inside cover:

: with, let alone the critical information} . . . please landline the State
: Police."

<Interesting story snipped>

Walter, you probably did this, but just in case, couldn't you just keep looking and as soon as the other guy stopped, inform him that you were mobile and looking for a place to pull off the road so that you could try to pass his info on or copy it down? A calm response might even get him to relax now that he knows he has someone on the other end, and you could also specify that he needs to stay on the frequency so that you could maintain contact. Tell him you missed his call when he called you, and would he please repeat just the call? Then put out a call yourself on the same frequency asking if anyone else was available to better handle this emergency traffic immediately. And request that they respond directly to the person initiating the emergency traffic. Wouldn't that help in a situation like that? Seems that would let you both know that there was someone else more able to respond with help immediately or not. Basically, take charge of the emergency but be ready to hand it off to someone better positioned. It sounds like the original caller, KF0OS, was a little frantic from all the adrenalin and would have liked you to take control.

I'm really interested in this as I'm part of our local RACES group, so the more I can learn from actual emergencies, the better I hope to be prepared.

As to me, I guess I don't really see the difference between "[call] mobile and listening" and "[call] mobile. listening." Seems like both indicate a mobile unit, whether in car or on foot, and that that person is just listenning. I'd also consider mobile appropriate when parked in the car, as you can just turn the key and go.

I confess I'm new, as you can tell from my call, only 3 months, but I don't see how there's any real confusion, just a matter of arguing about syntax

that results in the same effect.

Respectfully & 73 de Bill, KC7JSD

This is the reason that I have resisted requests by users to have our repeaters transmit PL. Those using PL decode eventually get lazy and don't MONITOR the frequency before transmitting.

We use PL decode on our PLMR equipment. But a mobile automatically goes into carrier squelch (monitor) when the mic is removed from the mic clip. Portables use "tx inhibit on busy channel" to prevent a user from keying up on traffic using a different PL or operating simplex. It more or less forces people to monitor.

If you have access to a fax with international access...
You can get a FCC-610 by "fax on demand" service from the FCC forms contractor in Washington D.C. You must CALL FROM A FAX machine - so you pay for the call. Use the fax handset to make touchtone selections then press the START button on the machine to receive the desired form.

The Document Retrieval Number for the 610 form is 000610.

Actually the case involved theft of services from a long distance carrier. So in that respect I think the FCC has a good case against the bozo.

>satellite subband (29.300-29.500).

David,

Although I do not want to encurage terestial work in the
satellite sub-band, I should like to point out, that the situation
is not quite as straight foreward as you describe it.

There used to be a section in the 10 metre band from 29.500
to 29.700 where interesting contacts usint FM were possible
during band openings, but this section has in the mean time
been cluttered with repeaters, which render it unusable
during band openings.

Also, there is a large proportion of amateurs, backed by contest rules,
who value a direct QSO higher than one carriede out with the help of some
repeater or transponder. BTW some satellite operators (including you?)
get upset about someone using their band even when the bird is not on.

Well, what I am getting at is, that we have to look a bit closer
into the subject before talking about reaching of breaching gentlemen's
agreements.

Current VEs:

I have one (1) current FCC Form 610.
I have three (3) family members that need to file
a change of address.

Can I simply duplex copy the form and still have the
FCC accept it? Is white paper acceptable? If color
is required, how close do I need to come to that
cream/yellow form?

Oh yes: the form is a little heavier than plain paper.
Is it necessary to match the paper weight?

Well I would ask for a definition of television, and whether the law
could be applied to a laptop. Obviously the trooper thought it
applied. Did your friend fight it in court? Do Florida troopers
watch television (MDTs) when they drive?

683. Digest of Articles - QST May 95 (Long - 54k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-12 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <3u0al8$m5f@horus.infinet.com>
Source record: 242492
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the May, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:"9600 Ready" Radios: Ready or Not?
Author>Bloom, Jon - KE3Z
Source>QST May 95, pp. 24-29
Abstract>Tests of current amateur VHF/UHF transceivers find many that are not effective in packet operation at 9600-baud, and a few that are. Manufacturers are now designing, and will soon introduce, many more.

Digest>In packet operation, 9600-baud operation is growing rapidly in popularity. Only a few existing VHF/UHF transceivers are capable of efficient operation at that data rate.

The reason is that the modulation and demodulation techniques usable at 300- to 1200-baud are entirely different from those required at 9600. At the lower rates, the data stream lies well within the passband used for voice, so transceivers designed for phone operation can handle them. Two-tone AFSK is simply applied to the FM modulation circuit, which causes the transmitter to emit the mark and space frequencies.

At 9600-baud, in contrast, the problem is more complex. The binary data signal must be encoded, filtered, and then applied directly to the FM transmitter to produce a true frequency-shift-keyed (FSK) signal.

Some time ago, G3RUH developed a 9600-baud modem design using a special pulse-shaping and coding technique that is especially resistant to distortion. His design has now become a de facto standard that most manufacturers of amateur equipment are following. Beyond that, however, each transceiver manufacturer has taken their own approach to producing radios capable of operating at the new, higher speed.

To determine how well they have succeeded, the ARRL laboratory has tested six currently available radios. Four are 2-meter FM transceivers that have been previously reviewed: the ICOM IC-281H, Kenwood TM-251A, Standard C-1208DA, and Yaesu FT-2500M. In addition, they tested an ICOM IC-820H, which is a dual-band (144/430-MHz.) multimode transceiver, and a TEKK KS-900 70-cm. data radio. The TEKK unit is a crystal-controlled 2-watt transceiver, providing FSK data operation only. It is designed for commercial users, but can be bought for amateur use through certain retailers.

The primary criterion used in rating the radios is the bit error rate (BER), which is a measure of how many bits sent through a system will be received incorrectly, on average. It is generally written in scientific notation, so one error per 1000 bits would be written as a BER of 1 * 10^-3.

The article describes, in detail, the equipment setup used in the tests, and the test procedure that was followed. In rating the receiver portion of each radio, the lab first measured the weak-signal performance of each. They then measured the BER at three different input signal levels: the 12-dB "SIgnal + Noise And Distortion" (SINAD) level, the 16-dB SINAD level, and at -50-dBm. At the 12-dB. SINAD level, even an ideal receiver would show a BER of greater than 1 * 10^-4. At 16-dB SINAD, excellent receivers should measure BER less than 1 * 10^-5. At -50-dBm. input level, even a rather poor transceiver should develop BER less than 1 * 10-5.

Although the tests found significant differences between receivers in weak-signal sensitivity, the overall bit error rates were respectable in all cases. The transmitter performances, however, showed a very different picture. Not a single one of the 2-meter FM radios comes near the minimum acceptable level. All miss it by more than 10:1! Only the TEKK KS-900 and the ICOM IC-820H qualified.

In a side bar accompanying the article, the author explains why the only amateur radio tested that performs well is the ICOM multimode dual-band IC-820H. The reason is that the frequency heterodyning scheme needed for multiband operation already contains circuitry that makes pure, relatively undistorted 9600-baud in a straightforward way. To add such circuitry to the single-band 2-meter radios would greatly increase their cost.

The six radios tested do not represent the only ones on the market. New data-radio designs are already on the market and many more are being developed that will provide greatly improved performance at high data rates.

Title>TA2:Weekend DigiVFO
Author>Craswell, James "Jay" - WB0VNE
Source>QST May 95, pp. 30-32
Abstract>Construction information for a frequency synthesizer using VLSI chips. Designed for use to replace the VFO in a Drake TR-7A, it is also useful in many other amateur applications.

Digest>WB0VNE's station transceiver, a Drake TR-7A, contains only one analog VFO, and it drifts appreciably. To replace the analog VFO with a digital one capable of instant switching from any one frequency to any other, he designed and built a digital VFO to be controlled by his computer.

The TR-7A requires a VFO to cover the range from 5.0- to 5.5-MHz. That signal is heterodyned to all HF bands, controlled with a bandswitch. The author's system duplicates that function and he makes no attempt to replace the manual bandswitch.

The circuit he selected is an excellent example of what can be accomplished using very large scale integrated circuits (VLSI). His systems uses three VLSI chips and a voltage regulator chip; the only

passive components are the filter capacitors in the power supply and one 1000-ohm potentiometer for setting the output level. Just one of the VLSI chips contains more than 32,000 transistors!

Since the Drake transceiver contains all of the necessary filtering to eliminate spurious signals from the entire system, the author had no need to provide filtering in his circuit. To use the circuit in some other applications, however, requires attention to the fact that the output does contain quite a number of spurious signals, some of which are less than 20-dB. below the fundamental.

In order to make it possible to use his IBM-compatible PC to control the DigiVFO, WB0VNE designed it to plug into the parallel printer port of the computer. He has so far written two control programs; DigiVFO and SIG_GEN. The former controls the output frequency over the 5.0 to 5.5-MHz. range with very fine resolution; any desired frequency can be set to a precision of less than 10-Hz. from the keyboard. In addition, the UP and DOWN arrows on the computer can be used to control the output frequency. The program also provides memories.

The other program, SIG_GEN, allows the synthesizer to be used in a sweep-frequency mode. When the article was written, it was stated that enhancements to these programs, and additional programs, were being written. Interested parties should contact the author to inquire about programs that are now available. His address is: 321 W. Fourth St., Jordan, MN 55352-1313. His E-Mail address is: 73016.27@compuserv.com.

A complete set of parts, including a double-sided etched and drilled PC board and all ICs, less only the power supply and enclosure, are available for $79.95 from Dover Research Company, 321 W. Fourth St., Jordan, MN 55352-1313. The kit also includes a 3-1/2-inch floppy disk containing SIG_GEN and DigiVFO, plus additional programs.

Title>TA3:How to Evaluate Your Antenna Tuner - Part 2
Author>Witt, Frank - AI1H
Source>QST May 95, pp. 33-37
Abstract>Evaluation of four representative amateur antenna tuners. Some designs can match high-impedance loads well, but fail with low-impedances. Others do well over a very wide range of impedances.

Digest>In this second and final instalment of this series, the author uses the testing procedures described in the first instalment to evaluate four widely used amateur tuners. They are: the Heath Model SA-2040, Johnson Matchbox, both the low- and high-power models, and the Collins Model 180S-1. These four were selected primarily because they represent commonly used designs.

The tests simulated conditions of SWR from 1:1 to 16:1 with the load impedance on the both the high and low sides of 50-ohms. This provided nine different load conditions on each of nine bands from 10- to 160-meters. In the unbalanced configurations, he derived two

measurements for each of the 81 sets of test conditions: the power loss percentage and the SWR bandwidth as a percent of center frequency. For the balanced loads, he made a third measurement: balance percentage. The article contains tables containing the relevant data.

The main thrust of this article is to compare the effectiveness of the different designs. The simplest circuit is represented by the Heath SA-2040. It is made up of a variable 12-microhenry inductor in parallel with a 125-0-125 pf. split-stator capacitor and a series 0-170 pf. capacitor in the output lead. The "hot end" side of the input goes to the rotor of the split-stator capacitor.

Test data shows clearly that this tuner is not suitable for use in matching low impedance loads. When used for that purpose, although it is capable of establishing a 1:1 match, the power loss in the tuner itself measures from about 25- to 75-percent! Those heavy losses apply to loads of less than 12.5-ohms impedance in the unbalanced case, and less than 50-ohms in the balanced case. Even when it is used to match loads that exhibit an SWR near to 1:1, the power loss on certain bands considerably exceeds 10-percent.

Unlike the other circuits tested, the Johnson Matchboxes were designed primarily to handle balanced loads. Both models of the Matchbox give remarkable performance over a wide variety of balanced load conditions. Although there is a provision in the design for shorting out one side of the Matchbox circuit to handle unbalanced loads, that configuration was not tested.

The fourth tuner tested was a Collins Model 180S-1. It is designed primarily for unbalanced loads and can be used as either an L-network, or a Pi-network. Test data is tabulated only for the Pi-network configuration and the performance is remarkable, indeed. The indicated power loss exceeds 10-percent only in the extreme cases of matching a 3.125-ohm load on the 10- and 12-meter bands.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:Azden PCS-9600D 440-MHz Voice/Data Transceiver
Author>Ford, Steve - WB8IMY
Source>QST May 95, pp. 78-79
Abstract>Performance evaluation of a new single-mode, single-band FM transceiver. It is a superior performer in both packet (1200- and 9600-baud) and voice operation.

Digest>The Azden PCS-9600D is apparently the first single-mode, single-band FM transceiver that is truly ready for 9600-bit/s operation. Its transmitter is also able to perform well at 1200-bit/s, as well as on FM voice, because of the design of its frequency-determining and

modulation circuits. To produce a data-modulated FM signal, the data signal is applied to a 45-MHz. VXO. The VXO output is mixed with the frequency synthesizer to produce the operating-frequency signal.

The voice modulation circuit is not active in that mode of operation, consequently the distortion that might be caused in that circuit is absent and high-quality frequency response results. When the radio is switched to voice mode, the VXO is left unmodulated and the synthesizer is modulated directly. Performance is excellent in both modes of operation.

The radio is well designed for either base station or mobile use. It is compact, with convenient front panel controls. It transmits from 430- to 449.995-MHz. and receives from 416- to 465-MHz. This provides complete coverage of the 440-MHz. voice and data sub-bands. The front panel contains a dedicated data jack, alongside of which is an LED indicator that warns if the audio level from the TNC is too low. In data mode, the unit can operate at either 1200- or 9600-bit/s.

The transmitter section produces either 10- or 35-watt output power. Twenty-one memory channels are provided, each of which stores transmit/receive frequencies along with CTCSS tone frequencies. A CTCSS tone encoder is also provided.

A multifunction microphone, with keypad, is included. The manufacturer's list price is $649.

Title>PR2:Autek Research Model RF-1 RF Analyst
Author>Kennamer, Bill - K5FUV
Source>QST May 95, pp. 79-81
Abstract>Evaluation of a small, versatile, and effective RF analyzer. It is effective in antenna and feedline analysis and adjustment.

Digest>The Autek RF-1 is a very small but versatile antenna and feedline analysis instrument. It contains an LCD digital display that is easy to read indoors or out, and the operating range includes frequencies from 1.1- to 47.6-MHz., completely covering all of the HF amateur bands. The power supply is a 9-volt battery, or else power can be provided by a 9-volt wall plug cube.

Frequency measurements are accurate to better than 1-KHz. at the low end and 5-KHz. at the high end of the range. SWR indications are accurate to better than 10-percent below 3:1, 15-percent below 9:1, and 20-percent up to 15:1. For SWR very close to 1:1, the accuracy of this SWR indicator, as is also true of most others, is affected by diode drops. If it is really necessary to measure an SWR less than 1.2:1, one should measure the impedance and calculate the SWR from the formula: SWR = Z / 50 or SWR = 50 / Z, whichever is greater.

The instruction manual clearly describes how the unit can be used to measure SWR, resonant frequency of half-wave dipoles, dimensions of half-wave and quarter-wave stubs, the velocity factor of coax cable,

power loss in a feed-line, cable impedance, the effect of radials on the impedance of vertical antennas, and the values of inductors and capacitors.

The manufacturer's suggested retail price is $130.

Title>PR3:MFJ-432 Voice Memory Keyer
Author>Swanson, Glenn - KB1GW
Source>QST May 95, pp. 81-82
Abstract>Evaluation of a device that records voice messages and plays them back on demand; primarily used for repetitive messages, e.g. for use in contests.

Digest>The Voice Memory Keyer is a device that records voice messages, and plays them back on demand. It is used primarily to reduce the load placed on vocal chords of operators during phone contests.

The MFJ-432 is a compact box that can be used to operate with almost any voice transmitter/transceiver. It contains a memory that will store up to 20-seconds of audio. The memory can be apportioned in any desired way among four separate messages, each selected for playback by a separate pushbutton. In addition, message 1 can be toggled into repeating continuously by means of another button. The power supply is a 9-volt battery, or else an a.c. adapter can be used.

In operation, the reviewer found the unit easy to program and easy to operate. Its audio quality is good. His one criticism is that, once one initiates the playback of a given message, it is not possible to abort the playback until the message is completely transmitted. This was found to be a considerable annoyance when, in the heat of a contest, the wrong button was mistakenly pushed.

The manufacturer's list price is $100. An a.c. adapter adds $13.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Credit Where Credit is Due
Author>Margelli, Chip - K7JA
Source>QST May 95, p. 86
Abstract>Author declines credit for helping invent the W7LR "Lazy V" array. It was completely described years earlier by Les Moxon - G6XN in his popular book on antennas.

Digest>In this letter, K7JA modestly declines to accept credit for helping to invent the "Lazy V" array, described by Bob Leo - W7LR in QST Feb 95 Technical Correspondence. Mr. Margelli points out that the antenna was completely described by Les Moxon - G6XN in his book: HF ANTENNAS FOR ALL LOCATIONS.

Mr. Margelli had a conventional "sloping dipole" that led from the top of his tower downward at about a 45-degree angle. After reading Moxon's book, he experimented by folding the lower half of the wire back toward the base of the tower. When he checked the performance on reception, he found an apparent great increase in DX reception from Europe, indicating low wave angle reception.

Title>TC2:HF Radio Kills Ignition
Author>Ryan, Cornelius M. - W5OGP
Source>QST May 95, p. 86
Abstract>Ford pickup truck engine stalls whenever mobile rig transmits.

Digest>The author writes to describe the problem he has with his 1983 Ford F-150 pickup when he operates his HF transceiver on 75-, 40-, or 20-meters. Whenever he transmits, his engine dies! He has been unable to solve the problem, and finds that his Ford dealer's personnel show little interest in helping.

Title>TC3:Trombone Capacitors Revisited
Author>Rowlands, Ed R. - W9KWD
Source>QST May 95, pp. 86-87
Abstract>Author explains why the measured capacitance of the "trombone" capacitor falls short of the calculated value.

Digest>The article: "A Home-Brew Loop Tuning Capacitor", QST Nov 94, described a tuning capacitor the author made from concentric pieces of copper pipe as the capacitor's plates. The dielectric was formed of Teflon film tightly wrapped around the inside pipe to fill most of the space between the two tubes.

When the author measured the maximum capacitance, he found that it was substantially lower than his calculation indicated it should be. In this letter, K9KWD shows that a small amount of air space between layers of the Teflon, and in the clearance space that is left to allow for easy sliding adjustments, is sufficient to explain the discrepancy.

Title>TC4:The Unwelcome Element
Author>Miller, Dave - NZ9E
Source>QST May 95, p. 87
Abstract>Describes how an aluminum downspout resonated in the 40-meter phone band, disrupting the radiation pattern from a nearby vertical transmitting antenna.

Digest>Mr. Miller's letter describes a problem that Ken - K9KPM, recently encountered with his Butternut ground-mounted vertical antenna that stands next to his 2-story suburban home. He experienced good results from the antenna on all three bands for some time until he had work done on his roof.

The roofer added some flashing and metal trim. The next time K9KPM operated on 40-meters, he found that the SWR had risen to an

unacceptable level. No such effect occurred on either 80- or 160-meters.

After a great deal of experimentation and frustration, he finally discovered that the new downspout, which was 2-feet longer than before, was acting as a parasitic element resonant in the middle of the 40-meter phone band. He solved the problem by adding a 6-foot wire extension that lowered the resonance frequency sufficiently to remove the interference.

LAB NOTES (LN)

Title>LN1:Power - Watt's It All About?
Author>Gruber, Mike - WA1SVF
Source>QST May 95, pp. 88-89
Abstract>A primer on definitions and measurement of a.c. (especially r.f.) power.

Digest>This article contains a primer on the definitions and measurement of electrical power. D.C. power is calculated in accordance with Ohm's Law. A.C. power is more complex, and is affected by not only the voltage and current, but also the phase angle between them.

FCC rules specify that hams must limit their power output to "... the minimum necessary to carry out the desired communications", but in no event can it exceed 1500-watts peak envelope power (PEP). Any amateur who wants to operate at or near the legal power limit must use a PEP-reading wattmeter to measure the peak envelope power output to ensure that it does not exceed that limit.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:How to Prevent Bugs from Nesting Inside Your Antenna Traps
Author>Brock-Fisher, Tony - K1KP
Source>QST May 95, p. 84
Abstract>Prevent insects from building nests in traps. Block all entrances with fiberglass fly screen.

Digest>Certain kinds of insects tend to build nests, webs, or cocoons inside cavities of different sizes. Antenna tubing and/or traps often provide cozy niches for such unwanted guests. K1KP suggests that they can be prevented from access by covering the entrance with fiberglass window screen.

He recommends that a circle of screen be cut to a diameter slightly larger than the i.d. of the trap or tube to be sealed. Apply a small amount of silicone sealant to the inside surface and use a piece of

dowel slightly smaller in diameter than the tube to push the screen into the hole, puckering the edges uniformly around the periphery so that it will be bonded in place by the sealant.

Title>HK2:Antenna-Jack Fix Cures Intermittent Operation in ICOM IC-25H Transceiver
Author>Carr, Peter - WW3O
Source>QST May 95, p. 84
Abstract>A broken lead in the antenna circuit caused intermittent problem. It was solved by replacing the lead.

Digest>WW3O's 2-meter mobile transceiver developed an intermittent connection in the antenna circuit, especially in cold weather. The wire leading from the center pin of the SO-239 antenna connector to the PC-board was a solid wire that had been broken by the repeated flexing caused when the antenna plug was inserted and removed. He fixed the problem by replacing the wire with a longer piece bent into a shape providing a strain relief between the connector and the circuit board.

Title>HK3:A Mobile 12-Volt Adapter
Author>McCarthy, Dennis - AA0A
Source>QST May 95, p. 84
Abstract>Operating a mobile rig from power from a cigarette lighter socket vs. a direct lead to the battery. Describes provision to allow either.

Digest>The author can successfully operate his 2-meter rig on low power by plugging into the vehicle's cigarette-lighter receptacle. But when he tried to operate at the 40-watt level, the current drain caused so much voltage drop that the audio was distorted to an unreadable level.

He overcame the limitation by using one of the 12-volt connectors described by N1IST in his article: "A Standard 12-Volt Connector" in QST Aug 93, connected directly to the battery. To make it possible for him to use the rig in other automobiles, he made a patch cord with a female Molex connector, compatible with the plug, connected to a cigarette-lighter plug. Now, in a pinch, he can still plug into a lighter socket.

Title>HK4:Using Amperite Thermal Time-Delay Relays
Author>Miccolis, Jim - N2EY
Source>QST May 95, pp. 84-85
Abstract>Describes how to identify and use thermal time-delay relays.

Digest>Amperite makes time-delay relays that offer delays from 2-seconds to 180-seconds. Each consists of a heater and a bi-metallic thermostat-like temperature-sensitive device that closes a contact when the temperature rises to a fixed point. The time delay is controlled by the rate of heat input from the heater wire, and is fixed at the time of

manufacture.

The relays are made like vacuum tubes, sealed in glass and mounted on either 8-pin octal bases or 9-pin miniature plugs. For octal base types, the heater leads go to pins 2 and 3; the relay contacts are between pins 5 and 7. For the 9-pin miniature bases, the heater is between pins 1 and 6. One side of the switch contact goes to both pins 3 and 4; the other side goes to pins 8 and 9.

The author suggests that Amperite relays would be excellent devices to provide the delay required to protect the filaments of high-power transmitting that need appreciable warm-up time. Suitable relays are often found at fleamarkets, or in old equipment.

To decide whether a particular relay could be useful requires one to know the required heater voltage and also the time delay it provides. These parameters can be read from the part number, using the following code. The number is comprised of three groups of characters, plus the suffix "T" if the relay is miniature. The first group is a one- to three-digit number giving the heater voltage. The second group is one or two letters giving the contact type: NO for normally open, C for normally closed, and F for repetitive flasher. The third group is a one- to three-digit number giving the time delay in seconds. As examples, a 6NO30T is a miniature relay with 6.3-volt heater, normally open contact, and 30-second time delay. A 115C3 is an octal relay with 115-volt heater, normally-closed contact, and 3-second delay.

The filament power used by most high-power transmitting tubes is too great for the small relay contacts to carry the full load. They should only be used to control a power relay capable of handling the heavy current.

Title>HK5:How to Install PL-259 Plugs on RG-58, RG-59, RG-8X, and Similar Cables
Author>Hoyt, Emerson M. - WX7E
Source>QST May 95, p. 85
Abstract>Describes another way to attach PL-259 plugs on coax cable.

Digest>In this hint, WX7E explains his favorite method attaching PL-259 plugs to coax. It differs from that described in the ARRL Handbook (p. 22.7 of the 1995 edition) only in the way the braid is connected to the reducer (the tubular device that must be slipped over the end of the cable to fit between the body of the PL-259 and the outside collar). The author suggests that the plating should be removed from flat end of the cable reducer using emery paper or a file, and that area tinned; the shield braid is not tinned. The reducer is slipped over the cable leaving about 1/8-inch of braid to be flared at right angles and soldered to the tinned end of the reducer.

After the solder cools, any of the wires that protrude beyond the reducer diameter are trimmed off and the body of the PL-259 screwed onto

the reducer. Finally, the center conductor is soldered to the center pin and the skirt screwed on in the conventional manner.

Title>HK6:Two Ways to Protect a Car Roof from Magnetic-Mount Antennas
Author>Harris, Art - N2AH
Source>QST May 95, p. 85
Abstract>Use thin sheet rubber to protect car roofs from scratching when using magnetic-mount antennas.

Digest>N2AH protects the finish on his car roof by placing thin sheets of rubber under the magnet. He uses toy rubber balloons, with the necks cut off. He stretches the main part of the balloon over the magnet, and then two more on top of the first, providing three thicknesses of rubber. He finds that the balloons last at least several months, and are very inexpensive to replace.

FEEDBACK (FB)

Title>FB1:"Building a Digital Voice Recorder for Less than $15" QST Apr 95
Author>Wilson, Mark J. - AA2Z
Source>QST May 95, p. 29
Abstract>Corrects identification of a switch, and also that the chips are not digital, but analog.

Digest>In Fig. 1, S2 should be identified as a normally closed (NC) push-button switch. Also, the article described the ISD devices as "digital voice recording chips". In fact, they are not digital chips; they use a unique analog technology.

NEW HAM COMPANION (NHC)

Title>NHC1:WWV - Not Just Another Pretty Face on the Dial
Author>Mendelsohn, Steve - WA2DHF
Source>QST May 95, p. 66
Abstract>Describes the opertion of WWV, including the detailed schedule of its broadcasts.

Digest>WWV is the broadcast station supported by the National Institute of Standards and Technology (formerly the National Bureau of Standards). It broadcasts continuously on 2.50, 5.00, 10.00, 15.00, and 20.00 MHz from Fort Collins, Colorado. The frequencies of the carriers are controlled to the highest precision known to science.

The broadcast format is a sequence that repeats each hour. Each second is marked by a ticking sound. Each minute of the hour is broken into three segments: the first segment lasts 45-seconds; the second and third are 7.5-seconds each. The first segment of each minute is used either

for a special announcement or for a continuous audio tone. The second segment is silent, except for the seconds ticking. The third contains an announcement of the time.

The beginning of each hour is identified by a 1500-Hz. tone for 0.8-seconds. The beginning of each minute is identified by a 1000-Hz. tone for 0.8-seconds. The 29th and 59th second ticks of each minute are omitted.

The 19th minute (beginning 18-minutes after the hour) contains an announcement of current solar, atmospheric, and geomagnetic conditions affecting radio propagation. A condition of stratospheric warming, called "stratwarm", is announced when it occurs, at 8-minutes after the hour and may occupy the first segments of as many as three successive minutes.

Title>NHC2:Low-Impact Amateur Radio
Author>Taggart, Ralph E. - WB8DQT
Source>QST May 95, pp. 67-68
Abstract>A persuasive argument for QRP operation. The author includes a summary of his logs describing several years' operating experience, using a home-built transceiver with 4.6-watts output.

Digest>WB8DQT is a dedicated QRP (low power) operator. In this article, he makes a persuasive case that a QRP station is the least expensive way to enjoy amateur radio, causes the least problems of interference and neighborly relations, and can be every bit as exciting and entertaining as other ways of operating.

To demonstrate how effective QRP operation can be, the author lists his operating results of about 9-months' operating on 30-meter CW using 4.6-watts output. The antennas he used were a half-wave dipole, only 12-feet above ground, for the first three months; a ground-plane antenna on his roof for the succeeding six months.

He made a total of 500 two-way QSOs plus five incomplete QSOs. He averaged about four per day of operating, worked 42 states, 8 Canadian provinces, and 9 countries total. Of the stations worked, 24-percent were also operating QRP. His average signal report received was 6.2 and given was 7.8.

Note that this activity was all conducted during a low ebb of the sunspot cycle, and much of it during summer months.

Title>NHC3:Anatomy of a Repeater
Author>Ford, Steve - WB8IMY
Source>QST May 95, pp. 69-71
Abstract>A description of repeaters and their functions. Their widespread use make VHF/UHF operations possible over relatively wide areas using hand-held, mobile, or fixed low-power stations.

Digest>It is the widespread availability of repeaters that makes the 2-meter FM band the most popular among hams. Repeaters are fixed installations with relatively high-power transmitters and elevated antennas that emit signals blanketing a wide area. The repeater receives signals on one frequency and retransmits them on a slightly different frequency. They are usually supported by an organization of member hams who pay regular dues.

A repeater installation is made up of a receiver, a transmitter, a duplexer that allows the receiver and transmitter to operate simultaneously, a controller, power amplifier, and antenna. They are common on the 144-, 220-, and 430-MHz. bands, and a few also operate on other bands.

A problem common to all repeater systems results from the fact that the system can only repeat one signal at a time. This means that each caller must wait until a previous user is finished.

Courtesy requires that transmissions be kept as short as possible, and also that before making each transmission, every user should wait for a second or two to listen for emergency callers.

Most repeaters are single installations at one site and on one frequency. Some systems, however, have multiple receiving sites, are on multiple bands, or are associated with other repeaters over a wide area, thereby expanding their service area substantially.

Title>NHC4:Recycle Those TV Rabbit Ears
Author>Brogden, Al - K3KMO
Source>QST May 95, pp. 72-73
Abstract>How to make a 2-meter dipole out of a "rabbit ears" TV antenna.

Digest>Usually when one buys a television set, or even a VCR, a "rabbit ears" antenna is included. In many cases, they lie around unused for years afterward. K3KMO points out in this article that the whip on each side of the center insulator can be extended to 19-inches, which is approximately a quarter-wavelength on 2-meters.

He made a half-wavelength dipole by disassembling "rabbit ears" and using only the telescoping rods. A center insulator was fabricated from a piece of Plexiglas; adding a BNC connector completed the antenna.

He uses it to replace the "rubber duck" on his H-T when operating his home base. Used from inside his shack, he finds it now much easier to access a local repeater with a full-quieting signal.

Title>NHC5:Hooked on Meteors!
Author>Hammond, Tom - WD8BKM
Source>QST May 95, p. 74
Abstract>Using meteor scatter to conduct marginal communications over distances of hundreds of miles (kilometers).

Digest>WD8BKM is a VHF/UHF enthusiast and operates with a Yaesu FT-736R transceiver and a 150-watt amplifier. During the Gemini meteor shower, in December, 1994 he noticed strong signals that popped out of nowhere for one to several seconds, indicating meteor scatter. With his interest whetted, he made schedules with several stations at distances up to several hundred miles and made successful contacts. Since then, he operates during most regular showers.

Most contacts made through meteor scatter are so brief that one needs to repeat the call many times over, with it limited to the call letters of the called and calling stations. After a sufficient length of time, the called station will reply giving the length of time of the "burn" as, for example, "S2" indicating a two-second burst. In this way, the bare fundamentals of a QSO can be completed over a short period of time.

Mr. Hammond points out that, by pre-scheduling contacts during known meteor showers, one can pile up an impressive numbers of grid squares quickly, leading to an award.

Title>NHC6:Keeping Up With Hand-Helds
Author>Simpson, Joe - KD4LLV
Source>QST May 95, p. 75
Abstract>Suggestions of ways to carry H-Ts conveniently, minimizing the chance of loss.

Digest>KD4LLV offers two suggestions of value to hams who like to carry H-Ts with them. The first idea is a safe way to insure that the unit will not be lost by falling off one's belt (or be snatched). He bought a device known as a "key-keeper" at a truck stop. This is a metal clip that slips over one's belt. Attached to the clip is a ring through which the H-T carrying strap can be threaded.

The second idea is a convenient carrying case for all of the accessories one might want to carry along, such as: spare battery pack, earphone, speaker/mike, and/or telescoping antenna. He finds that a foam-lined plastic pistol case that he found at a gun show is an ideal carrier.

Title>NHC7:The Doctor is IN
Author>Various
Source>QST May 95, pp. 76-77
Abstract>Questions and answers of primary interest to newcomers.

Digest>In this issue, the questions discussed include: the difference between "dual-band" and "twin-band" radios; the use of r.f. bypass relays on receiving pre-amplifiers when using the same antenna for both transmitting and receiving; hardware vs. software interrupts in packet operation; balanced vs. unbalanced transmission lines; the meaning of certain terms in PC CONFIG.SYS files; how a foreign amateur should use his callsign when operating under a US reciprocal permit; proper use of the FCC Form-610 and 610-V; and others.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Phase 3D - The Ultimate EasySat
Author>Ford, Steve - WB8IMY

Source>QST May 95, pp. 21-23
Abstract>Description of the Phase 3D satellite. It is the most sophisticated and powerful satellite ever built by hams. It will make worldwide communication available to all hams, every day.

Digest>The Phase 3D satellite is rapidly approaching completion. It is by far the largest, most sophisticated, and most capable satellite built by amateurs. It is scheduled to ride into space on board an Ariane-5 rocket in April, 1996.

Unlike previous satellites, the Phase 3D will have such high-power transmitters, high-performance receivers, and sophisticated antennas that to work it from Earth will not require an elaborate station. Any amateur on Earth will be able to work the satellite using Mode B, for example, (transmitting on 430-MHz. and receiving on 2-meters) without needing a large, multi-element beam antenna.

It will be especially easy using microwave bands (above 1.0-GHz.) Although in years past microwave gear was expensive and exceptionally finicky, that is no longer the case. The author explains how any ham can get on the microwave bands at relatively low cost.

Because of the highly eccentric orbit that 3D will follow, it will appear in the same part of the sky every 48-hours. This means that operators can aim their antennas at a fixed point in the sky and never move them! Every other day they will be able to work the satellite for relatively long periods of time and make contacts over half the Earth.

Phase 3D has been designed and built entirely by amateurs who have donated their labor. Most of the materials and equipment used in its construction have also been donated gratis, or for discounted prices. But that still leaves a cost of millions of dollars to build and launch the "bird".

Although AMSAT (a non-profit corporation) now has enough funds to complete the construction of the satellite, not enough funds have yet been collected to pay the cost of launching. More is needed. Every amateur, throughout the world, is urged to contribute any amount of money that he or she can afford to help make the project successful. Feel free to contribute any amount, no matter how small, in any convertible currency. Send contributions to: ARRL Phase 3D Fund, 225 Main St., Newington, CT 06111.

Title>GI2:Pepper Hill's Flying Field Day
Author>Taber, Patrick - KC1TD
Source>QST May 95, pp. 47-49
Abstract>Semi-comic fiction.

Digest>This is a fictional account of a Field Day effort conducted by an inept group of hams. After many foibles, they got a station on the air with a balloon-supported antenna. During the night, the balloon

developed so much lift that it raised the radio equipment, tent, operating table and chair, and operator up in the air, held down only by the power cord attached to the heavy motor-generator.

From the elevated working position, the operator was able to log many countries. But after the contest was over, the members decided they could not claim the resulting points because they had been illegally operating air-mobile.

Title>GI3:Let Your PC Do the Logging
Author>Rudd, Lauren - KD8PZ
Source>QST May 95, pp. 50-56
Abstract>Describes available software for keeping amateur logs on computers.

Digest>Many amateurs keep their logs on computers. Doing so provides several advantages. For one, is very satisfying to be able to check instantly whether a call heard on the air is a ham who has been worked before and, if so, to see a concise record of all previous QSOs.

Another advantage is the ability to derive statistics from one's operating log; for example the total number of countries worked; the new countries worked in the last month; QSO breakdowns per band, by time of day, or by month; average signal reports received by band, by dates, by antenna in use, or other classifiers.

If one is using a transceiver built in the last few years, it is probably possible to have the transceiver automatically enter much of the data in a normal log. The time of day, the date, the call letters, the frequency and operating mode should all be available for automatic entry. If a CD-ROM "callbook" is attached to the same computer, it should further be possible to have the name and full address of the station worked automatically entered.

The operation of a computerized log is controlled entirely by the software used. The author made a reasonably complete search for popular logging software packages and found nine in rather common use. All of them were designed for use with DOS computers (IBM-compatible). He did not find any written for MacIntosh computers, but he was not looking for them.

Of the nine, six are designed for use with the DOS operating system, and three for Windows. The article contains a summary of the features of each, including a photo of the entry screen of each. All of the systems contain the basic QSO data, and some provide space for other, optional entries such as personal comments.

The prices vary over a relatively narrow range from about $50 to $110. All offer telephone support, in most cases provided by the same people who created the software.

Title>GI4:APCO Project 25: Sweeping New Standards for Amateur Radio?
Author>Kleinschmidt, Kirk - NT0Z
Source>QST May 95, pp. 57-59
Abstract>Describes the fundamentals of a new standard for public-safety communications and equipment being adopted by APCO. Much of it will probably be adopted by the amateur community.

Digest>The Association of Public-Safety Communications Officials, International (APCO) is an organization of police, fire, and emergency organizations, all of whom use VHF/UHF fixed, mobile, and hand-held equipment. It is attempting to standardize communication gear so that safety organizations can communicate with each other during emergency situations.

APCO's effort is known as Project 25, which has now become a joint federal/state/local effort. Their proposed system will be digital, using FDMA modulation techniques (frequency division); it will provide voice quality equal to, or better than, current analog FM systems; narrower bandwidth (eventual reduction to 6.25-KHz. from the present 25-KHz.), trunked systems that provide a control channel to assign frequencies dynamically; data encryption available; greater range and signal-to-noise ratio than present; producible by many manufacturers with open system architecture and competitive pricing; among other features.

Since amateur UHF/VHF operation is very similar to that of emergency organizations, it is very likely that most of the features in the Project 25 standard will be adopted by the amateur community.

In Europe, a similar standard project has been underway for some time. It is spearheaded by the European Telecommunications Institute (TETRA) and it appears that all European nations are likely to conform to their standard. Unfortunately, the standards groups on the opposite sides of the Atlantic do not talk to each other, or if they do, they do not agree. Although the goals of the designs are essentially identical, they have decided on incompatible modulation techniques: the European TETRA plans to use TDMA (time division) vs. the Project 25 FDMA (frequency division).

Title>GI5:A Solar-Powered Field Day
Author>Capon, Robert S. - WA3ULH
Source>QST May 95, pp. 60-63
Abstract>Effective Field Day operations can be conducted by QRP using solar power. Discusses the types of equipment available, and the size and cost of solar panels necessary to power them.

Digest>Field Day operations can obtain extra points if they power their station from the sun. WA3ULH explains the various possibilities of a sun-powered station, relating the available power output and operating time to the capacity and cost of solar panels and batteries.

Operating a full-size transceiver with 100-watt output for a continuous 24-hour period would use some 54 ampere-hours of power. This would require a 60-watt solar panel, which is a very large and costly one. On the other hand, excellent Field Day results are commonly reported by groups operating with QRP equipment (maximum 5-watts transmitter output).

By selectively picking one's equipment, it is possible to keep average current drain to as low as 65-ma. This could be supported by a modest solar panel of only 200-milliamps (5-watt) capacity and a 7-amp-hour storage battery. The size and weight of such station equipment would be small enough to allow back-packing to the operating site.

The remainder of the article is made up of a one-paragraph review of each of eleven QRP transceivers for either SSB, CW, or both operation, that would be suitable for Field Day, as well as general purpose use.

>many, many good hams who are applauding the FCC's action in this case.
>We only wonder what took them so long.

There's more to the KV4FZ thing than the felony. He was, I believe,
deeply involved in the 14.313 mess, and his high profile there caused
the FCC and others to look more deeply into his activities in other
areas. One would hardly expect them to renew his ham license after
all that has occurred. After all, he's demonstrated pretty clearly
that the doesn't believe the FCC's amateur radio rules apply to him!

To the guy with the friend who wants to get a license: tell your friend
to go to the local Radio Shack and pick up a license study guide. In
the guide is a form 610. I don't have one in front of me, but I don't
recall any questions about felony convictions. Tell him to just apply
for the license like anyone else would.

The reception from a scanner with a quarter wave 70cm antenna (simple wire on a BNC) for 900MHz phones is much better than 46/49 phones with an appropriate antenna.. :)

I was actually amazed to hear people all over the place, at one time 11 conversations from 902 to 908 or so.. And this is in a lower middle class neighborhood, no super rich people around here...

Apparently just super-poor-because-they-like-neat-toys, like me.. :)

The Uniden 9100 rulz... Slight echo, but it's almost amusing.. Now if it had a LARGE echo delay it'd drive me nuts, but it doesn't bother me at all..

Just installed a TM-733A and found a feature (?) that
I cant find in the owners manual. If you hod [F] for
more than one second, the button on the right (next
to BEEP) has a big X over it. This isnt shown on the
manual for [F] functions on p. 24. If you push that
button it keys the radio and the only way I could unkey
was to do a reset. Powering off the radio didnt help
as the radio would power on in transmit mode.

Anyone know what that feature is for and how to unkey
without resetting in case it is accidentally activated?

> might be easier ways to get a ground rod into the earth?

I use copper pipe for all my grounds and WASH them into the ground.
Rig up a pressure fitting to adapt to the garden hose and connect that to
your copper pipe, then with the water running, slowly push the rod
into the ground. The only place this hasn't worked is solid rock and
thne with enough water that would go also <BG>.

All my grounds are a minimum of 8' deep and seem to work fine. All
strapping is done with RG8 braid.

As far as removing one, forget it. Its easier to buy a new piece.

692. source of quick-release harness for mobile rigs ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-12 00:00:00 UTC
From: sheppard@ruby.decatl.UUCP
Message-ID: <SHEPPARD.95Jul12151609@ruby.decatl.UUCP>
Source record: 242501

Can anyone point me to:
(1) a commercially made product
or (2) useful homebrew hints
for a quick-disconnect harness for a mobile 2M or dual-band rig ?
(The rig in question is a Yaesu FT-2400).

I remember hearing of such a beast once but don't remember the source.

My intention is to ease the transfer of the rig between two vehicles
and a fixed base station. I envision identical pre-wired docking bays
permanently installed at each location to provide power, ground,
antenna (and control ?) connections, and a corresponding low-profile
harness permanently mounted on the rig itself.
Mods to the rig are probably inevitable (sigh).

The prime issue here is speed and ease of connect/disconnect, not security.

Thanks in advance for any pointers, information or suggestions !

I really don't care how many people monitor the repeater. And I don't
think you really know why the users on our system want anything. If
they want to go somewhere else, I won't stop them.

>
> I would say the repeater tech committee is LAZY if they can't impliment a

> You would be surprised how many hams and their families come back and

> really monitor.

Is this an open system? Sounds like some of your users are pretty well informed if they follow all of this. We operate an open system and try to keep it simple. We don't want to have to educate every user. The point is that it is bad operating prcatice not to monitor the frequency before using it - even if you think everyone else on the frequency is using your system. There might be traffic on the frequency that is not using PL. And you end up with people that will stop monitoring or just forget to do it. Everyday generic users will sometimes get sloppy. We are a casual system.

As far as quality signal goes... Anyone receiving interference on a repeater output freq that would cured by CTCSS shouldn't be blaming the repeater. Blame it on the rice rocket radio capable of DC to light receive. I have very little problem with intermod on my Yaecomwood FT-TM-IC-XYZ - I keep the squelch turned up all the way - if the repeater can't break the full squelch setting, I am not going to have a very good signal into it anyway.

I am not interested in telling the users how they should program thier radios or use memory slots. We publish the freq with a standard split and required buzz. That's all you need.

Closed systems are another matter. When you limit access to your system, you can diseminate special info to your users more easily.

BTW - we are not a club, so there is no "tech committee" and the users don't attend meetings where we explain anything to them. No invitation is required to our repeaters (you can be uninvited for being a troublemaker). There are no "members".

You need to remember that systems and users are different. Different systems have different requirements. What works well on your system might cause trouble on mine.

Gary, The truth is, NO self selecting poll can ever be considered a scientific poll. I don't care how many questions you ask to achieve a proper demographic mix, because those who chose to voluntarily participate in a poll are usually more ego involved in the issue than the average person. One can attempt to control for demograhics, but the act of self section defeats that effort.

I'm sure you're aware Gary, that just because a poll has sufficent size, comprehensiveness,and randomness doesn't mean it's results are going to reflect the views of the group being polled. Why you ask? because there are a number of other variables that can affect the poll results. How a poll question is worded, from both a verbal and nonverbal perspective, can bais the respondent. The dress one wears can even communicate such a bias. Certain types of dress can send a message of a political bais. Extensive research on polling indicates that when those polled think they know the pollsters bais on an issue,they will then answer the questions so as to be more in agreement with that perceived bais.

Polling is vary new,its only been around for about 60 years. Pollsters still have a great deal to learn about the scientific methodology of polling. Many hard scientists, in fact, consider it a gross misnomer to call any poll "scientific". They would argue that polling is more an art from than science.

Gary, if you consider the so called Scientific polls accurate, you will be in for alot of disapointment. Just ask the 1994 Democratic Congressional Deligation.

I invite you to come on over to the web and vote on lowering the Code requirements for HF operations. I think You'll find the results at least mildly interensting, and if you disagree with the results, you can soothe your pain with the knowledge that the results aren't "scientific". 73's Ray

Why not use 29.5 or somewhere between 29.1 and 29.2 for FM simplex ?
What about the odd frequencies between 29.5 and 29.6 (ie..not the even
rptr input frequencies) ?
I know what you're getting at...there seems to have been a lack of
consideration to the FM portion of 10 meters when the sats were
allocated.
Maybe they should change the 10m bandplan: 28.0 - 28.2 CW
28.2 - 28.3 Beacons
28.3 - 28.5 Novice SSB
28.5 - 28.8 Tech SSB
28.8 - 29.0 AM
29.0 - 29.2 FM Simplex
29.2 - 29.5 Satellite
29.5 - 29.6 FM repeaters I/P

29.6 - 29.7 FM Repeater O/P

Tony,

The Commission may refuse to license, or revoke the license, of any person
for any valid reason. One of those reasonss is "character unfit to hold a
Commission license."

While the Commission designated the renewal of a license for a commercial
broadcast station for hearing based on the convictions of its owner for drug
trafficing, I doubt that the Commission would have a problem with a low
level drug offender who has "been rehabilitated." On the other hand, if this
individual's conviction was for drug trafficing I would check with Commission
staff (or better yet, contact the ARRL and see if their liason would check
with Commission staff) before taking the exams.

In article <3ts2qe$1fc@newsbf02.news.aol.com>, gfarobin@aol.com (GFA Robin) says:
>
>I have heard a rumor that says anyone with an Amateur Radio license can
>legally operate a mobile police scanner in any state. I have searched the
>Internet for information on this and can't find anything. Does anyone know
>where I might find a copy of this law?
>Thanks bunches!!!!
>Robin, KB9LAC, no longer a ham wannabe,but a Ham :)

In Florida hams are exempted from Florida Statute 843.16 (Unlawful to
install radio equipment using assigned frequency of state or law
enforcement officers; definitions;execeptions; penalties. -)

I have one question about section 1 below:

(1) No person, firm or corporation shall install in any motor vehicle or
business establishment, except emergency vehicles as herin defined, or
places established by municipal, county, state, or federal authority
for governmental purposes, any frequency modulation radio receiving
equipment so adjusted or tuned as to receive messages or signals on
frequencies assigned by the Federal Communications Commission to police
or law enforcement officers of any city or county of the state or to the
state or any of its agencies. Provided, nothing herin shall be construed
to affect any radio station licensed by the Federal Communications
System.

I understand the part about installing a scanner in a "motor vehicle",
but what about the "business establishment" part? Does it mean you
can't have a scanner installed in a store in Florida? I know A.E.S.
Orlando has 2 or 3 scanners running on their front counter every time
I go in there.

Our exemption:

(3) This section shall not apply to any holders of a valid amateur
radio operator or station license issued by the Federal Communications
Commission.

I was told by the director of communications of our local police
department (also a ham) that a hand-held scanner not attached to the
car by a power cord or external antenna is not considered "installed."
He also said the instant you modify your radio to transmit out of the
amateur band and possibly on law enforcement frequencies (by snipping
that little blue wire or removing some smt components), you are no longer
covered under the "receive" catagory of F.S. 843.16 and you are in

violation of the law.

I know that the 6 o'clock news makes a big story out of a captured bank robber suspect that had a scanner on the front seat of the getaway car. So I guess we scanner enthusiasts are "suspect" when stopped by the police and have the AOR 1500 on the front seat.

One last item of information. A friend of mine was driving down the road in Central Florida and attempting mobile 2 meter packet. He had a notebook on the passenger seat hooked to a tnc and into his installed mobile radio. He was stopped and given a ticken under the Florida law that prohibits "watching television" by any front seat occupant in a moving vehicle.

The State of Florida just went on-line in January. You might try searching their information at: http//FCN.state.fl.us

Good luck!

Rod

Well, its pretty wordy but it is here. No exemptions for 5 wpm.
For those interested, it is in the ARRL VEC VE manual, seventh
edition, chapter 7, page 55, under Morse Code Exemptions.

But it really does say just what many of you are saying it says.

That may be true today. However, I expect that the Commission will designate Mitnick's license for hearing if/when he trys to renew ... that's the Commission's normal procedure unless the individual is found guilty of an offense directly under the Commission's jurisdiction.

There are type accepted motorola radios that I have seen at discount
stores for the mid two hundred dollar range.

Andrew Ward (award@auspex.com) wrote:

: I need a couple portables (hand-helds) that can operate in the 151-154 Mhz region.
: This is a commercial band. The problem is that commercial radios seem to be $400-600

Source record: 242638

Someone Please Help--
I am in need of renewing my FCC Radio Amateur License and I dont have access to any 610 forms. I DO NOT need the "vanity call sign form" (known as 610 V), just need the plain-jane form to update/renew/change address of an amateur station license. It must be a newer version (I think printed after 1992 or 1993). Are there any VE's on-line that might have 1 form to spare? I'll send you $1 or IRC to cover postage and a QSL card in return.

Could someone please help me? Please send me Email if you can help and I'll send you my state-side address (which is delivered via internal company mail every few weeks to me in Taiwan).

Thank you in advance de Joe

From: holtzman@shazam.ecs.csus.edu
Message-ID: <3tvcto$iqk@csusac.ecs.csus.edu>
Source record: 242641

I need informaton on a Motorola Spectra model D43KMA7JA5BK and a Johnson model 242-8515. I would like to know the band split, no. of channels, method of programming, computer, cloning, keyboard entry, power output, and whatever else that would be interesting. These would be used on commercial freqs, so it is not necessary to go into the ham bands with them..

Thanks - jrh

** Weekly Posting **

The QRZ Callsign/Email Registry Now contains over 4100 callsign to
email address listings and ig growing daily.

We have a WWW page where you can input your e-mail address directly
into the QRZ Callsign Database, where it will be published on both
CDROM and on the internet. When you use this page, your email-address
is made instantly available to the online database.

Everyone is encouraged to check in and add their e-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and e-mail address.

The URL is:

http://www.qrz.com/email.html

Register your e-mail address today!

714. 10m Satellite Subband QSOs

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-12 00:00:00 UTC
From: dgordon@sadira.gb.nrao.edu
Message-ID: <3tvman$6g6@solitaire.cv.nrao.edu>
Source record: 242644

Being a satellite operator and enjoying the hobby, I have
been noticing that over the past several weeks when 10m is
open, there are some amateurs caring on QSOs in the 10m
satellite subband (29.300-29.500). This is set aside for
space satellite downlinks. Two hams were on 29.303 talking
about who was on frequency (29.305), both were not! They
were from the southern states. The next group was about
5 hams using FM!!! Talking from New York to AL. PLEASE,
QSY down from 29.300 or up above 29.500 MHz. Those callsigns
will not be posted here nor emailed; they are in my logbook.

I know we all get excited when the band opens up, but try to
observe the gentlemens agreement and try to keep the QSO's
out of the subbands and the weak signal subbands. Thanks.

Who the hell are you, what the hell are you talking about, and that the hell is your point? If you have something to say to me from this point forward, either say it in private email or keep your fingers off the keyboard.

Now, if I think I understand what you're blathering about, it refers to my comments about the copyright discussion (which, IMHO, belongs on rec.hang.all.the.lawyers, not rec.radio.anything). My point in the original post was that the subject was much more complex than posters were making it out to be, and the advice that you so admired was not necessarily applicable to the issue at hand, and that more info was available to those interested. I certainly don't need information or advice from YOU, though...

BTW - who said anything about photographs? Geez! Idiots just FLOCK from the woodwork to add their undereducated, underinformed $.02...

Unfortunately, this type of popularity contest has little meaning
as a polling technique. There are two major problems. First, the
sample is self-selected which biases the result, and second, the
sample isn't demographically representative. You can partially
rectify both failings by designing the questions properly. You
need to ask more than one question, and the questions have to be
selected to highlight the sample biases so that they can be properly
weighted. This isn't easy, which is why most polling organizations
don't use self-selected polling techniques.

: Wrong. Copyright doesn't depend on artistic merit.

But in the cited "white pages" example, the US Supreme court said
that the white pages was not copyrightable because there was
no creative effort involved. The white pages being nothing more
than an alphabetical listing of telephone subscribers (i.e. such
an alphabetical list as the white pages was neither creative...
nor artistic...i.e. creative).

: > (I tried my e-mail address and quest to no avail)??
: > Thanks
: >
: >

: login : anonymous
: password : your e-mail address

I suspect the following was left out:
ftp callsign.ualr.edu

: Connected to athena.ualr.edu.
: 220 athena.ualr.edu MultiNet FTP Server Process 3.4(14) at Tue 11-Jul-95 8:10AM-CDT
: Name (CALLSIGN.UALR.EDU:thivet): anonymous
: 331 anonymous user ok. Send real ident as password.
: Password: p_gachon@supaero.fr
: 230-Welcome to the University of Arkansas at Little Rock anonymous FTP server

The above gets you into the anonymous FTP site, but *not* to the callsign
server.

To connect to the server you must telnet to it using port 2000.

From a U*IX account or some versions of VMS TCP/IP packages:

$ telnet callsign.ualr.edu 2000

From VMS using Multinet:

$ telnet callsign.ualr.edu /port=2000

From other Telnet clients: make sure the TCP port number is set to 2000
(usually defaults to 23)

If you are unable to cause your telnet client to use port 2000, you *will*
receive a username and password prompt from athena.ualr.edu; you will not be
able to access the server this way.

Any further questions/problems/etc, feel free to contact me...

724. Kenwood BT-9 pack - No NiCd's?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-12 00:00:00 UTC
From: llee@gomez.sanders.lockheed.com
Message-ID: <LLEE.95Jul12105925@gomez.sanders.lockheed.com>
Source record: 242654
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I recently bought a Kenwood BT-9 AA-battery adaptor (it holds 4
standard AA cells and plugs in like the normal nicad pack for the TH22AT).
The TH22AT manual and the BT-9 have a warning:

"Installing NiCd batteries in the battery case will cause an
electrical short that generates heat and damages either the battery
case or the transceiver"

I'm wondering how is this possible? Also, does anyone know if charging a
NiCd equipped BT-9 pack is OK using the radio's internal charger?

I checked the schematic and the TH22AT internal charger uses an
(emitter follower) constant current source set to about 50 mA.

Thanks!

I'll bet that there's someone in the store with an FCC license.

>Our exemption:
>
>(3) This section shall not apply to any holders of a valid amateur
>radio operator or station license issued by the Federal Communications
>Commission.

This would be replicate and unnecessary if the, "Provided, nothing herin
shall be construed to affect any radio station licensed by the Federal
Communications System." is really, "Provided, nothing herin shall be
construed to affect any radio station licensed by the Federal
Communications Commission." In, Florida Statute 843.16.

>I was told by the director of communications of our local police
>department (also a ham) that a hand-held scanner not attached to the

Logic, not law! This should have been posted under "Dumb and dumber."

On the other hand, is it against the law, in Florida, to leave the controls
and slide into the back seat to take care of that priority packet message?
If not, this could be extended? It would be very helpful, on a long RV
road trip to Micky Land, to leave the controls for the restroom - maybe,
resuming the actual control of the RV later. :)

Do an Archie search for ADV22.ZIP every so often until it shows up somewhere. I haven't seen it yet, but the last version one was ADV21.ZIP. This is actually a test generator program. For just the raw question pool, check the ARRL's Internet server. I don't know if they have the new pool or not. BTW, the Radio Shacks here are still selling the OLD Advanced books. One store had them marked down to "$4.95, while they last" and another was still charging full price!

Just out of curiosity, why would you want the US question pool in Canada?

Bob:
The X you see is the cross band repeat feature that Kenwood did not print in the manual. There are other features not printed in the manual too. You can call Kenwood to receive the info and get the run around. Another option that you can send me a SASE (a very big envelope with first class postage, it is very heavy) to my call book address and I will send you every possible mod and undocumented features on the TM-733A.

Hello, KB2HWX here. I rarely make a European contact.
I talked to IK4GRO, Lauro Zanoli in Northern Italy
and I desire a qsl card.
I accessed the QRZ database and got "address 1 and address 2"
and I'm not sure how to address my qsl card.
Here's the info:
Address 1: Via Degli Espostil 9
Address 2: 41018 S. Cesario S.P., MO Italy
Does anyone on this newsgroup know if I should include
both lines on my card or is one different than another?

Also, when qsling with European countries, is it better/best to
mail qsl cards in envelopes or just as postcards.
I am thinking that it would be good if I included
a self-addressed unstamped envelope.

(I really want a card from Italy.)

Please e-mail me at the address below, directly, with any
advice and info.

Also, if anyone could look up TI2JJP (Jose, Costa Rica)
for me I would appreciate it as I can't seem to find his address anywhere.

Ed,

Burt is not worth the time. Below your post are my final words to Burt
(adjusted for the current post), and a reply to his orignial post on
this subject. I agree with what you have stated, and Burt will probably
ignore the point that Mr. Wilson was speaking about people, not an
organization (in the strictist sense of the word).

In article <3u0i6g$gr6@mgate.arrl.org>, ehare@mgate.arrl.org (Ed Hare) writes:
|>
|> Then Mr. Wilson used the term correctly; there are 170,000+ real people that
|> are part of the League. I don't think I love every one of them, but
|> I know I feel love for many I have met. As I go to conventions and hamfests,
|> I see a lot of League diamonds on the badges of people I talk to. These
|> people are not some faceless organization. The ARRL is far more than "that
|> organization in Newington." The ARRL is also what the local hams make it in
|> each ARRL Section and Division.
|>
|> 73 from ARRL HQ, Ed Hare, KA1CV
|>

Burt's posting is the most cold and heartless posting I have ever
had the displeasure of seeing come across the net. To attack someone
who has suffered and now must leave his job due to health. And in his
last comments, leave a heartfelt thanks to the PEOPLE he has worked
with.

He is not worth any more of our time, and I consider
his worthless dribble to no longer be a plea for attention, but
garbage that will simply be put in its proper place before it
even comes into my machine.

HE REALLY NEEDS A LIFE.

My author kill file now includes Burt Fisher, and the 'net is a more
genteel place.

To all others out there, have pity on this poor lifeless lump of
flesh that has insisted on posting here. Burt apparently cannot get
satisfaction in his own home, like the rest of us.

I'm a little skeptical about this message. Particularly the when she
claims that many repeaters throw her off, because of the "fingerprint"
(I rather call it a radio signature, but you can change it to raido if you
have the need to..) her radio gives off during transmissions. How
many repeaters or operators actually have this equipment? Do you
really think the majority of repeaters actually have this equipment
(which I understand is quite expensive).

Mary is either on some controlled substance or there are a group of
people trying to play a sick prank on her (or she could be flame baiting).

732. Do Pre-amps work?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-12 00:00:00 UTC
From: towen@freenet.vcu.edu
Message-ID: <3u0v3f$ndr@freenet.vcu.edu>
Source record: 242662

I've seen several amplifiers with built in pre-amps recently. I can understand the use of a preamp up on a tower to prevent feedline losses, but if my HT is connected to the 2 to 50W amp, will the pre-amp do anything?

I have heard that pre-amps are useless because todays receivers are very sensitive; the arguement is that the pre-amp amplifies the signal AND the noise.

Except in the long feedline case, will a pre-amp help my HT, mobile or base station receiver, or is it useless feature?

Hey Jeff,
I bet you'd be suprised to find that here in Massachusetts,
our driving tests are administered by folks who don't kow how to drive...
The STATE POLICE!!! I've yet to see one obeying the speed laws,
the laws reguarding safe driving, etc. But by Golly, they get to the
barracks in time for the end of work shift, and to spare!

Now... as for the real issue, I DON'T CARE HOW the extra got his ticket!
He has it and that's all that's required! (I wouldn't show my face at
an exam session as a VE if I was granted a waiver for High Blood Pressure!)
(But that's me!) I need every VE I can get! I have had to cancel sessions
for lack of VE's. (I'll nail any DIS-Honest VE personally!)

I can't believe the attitude though! A fellow is willing to VOLUNTEER his
time and stuff to help others into the hobby, and is abused for it.
Is it that there is a fear he will "comminicate" how to avoid the code test?
Is it fear he will "allow" a passing grade when one is not warrented?
Or is it, everyone else has had to do it, so measure up?

All me team's VE started out as NO-CODE techs. They sweated out the code
test, one way or another. And Yes! some by multiple guess, or multiple
tests (every month for a year!). I don't care, the FCC has granted the
license, which is good enough for me. (I'd rather not know if you got your
ticket via waiver, though! It will make for a better relationship.)
I even know a fellow who was granted, via a mistake at the FCC, an advanced
license, when he passed his general. Yes, the paper-work was CORRECT.
I brought the issue to the VEC, it was dismissed, so the fellow finished up
his Extra code and written and is one now! I suppose knowing the code well
was reason enough to waive the hardest written we offer! :) :) :)
(The fellow was a Navy code instructor!)

Do (collective) you get it? Let's not put stumbling blocks before the
"blind", rather let's spend our energy enhancing the prospectives.

>
>Gary

Gary, I think you're being a little harsh. I use a scanner in my
vehicle and have many other reasons for doing so. Actually I
have it for many reasons and the ones you mentioned are none
of the reasons I use a mobile scanner. First of all the police
are naieve to think that the only thing I want to hear is them.
BULL!!!
On the rare occasions that I do about the extend of it is if
I hear of some road blockage on my route I'll avoid it and also
avoid the detours that they are sending uninformed people on.
This not only *helps* the police but the congestion too.

To get Israely reciprocal license is a matter of 20 to 30 min.
Upon arrival, you should visit Israely Ministary of Telecomunication,
Radio Amateur Section in Tel Aviv located in "Shalom Towers".
Present your valid license and in 5 min you are done!!
That is if the person in charge is in the office, not on coffee/tea
break or strike.

If you run into any problems, please get in touch with 4X1AH - Yankel
or 4X1AT - Aharon.

Jim,
You obviously havn't been at an exam session...
Cheat? How do you imagine knowing the code allows the VE to better recognize cheating? I venture, MOST of the exam sessions I've attended have had MANY extra's who couldn't do 20 W/M if their lives depended on it. Passing the test once is all that's required. Forgetting code after is often a very real possibility.

Hi There,

To all current subscribers of VHF Communications Magazine, Issue 2/95 of VHF Communications has now been shipped and should have been received by all UK and European subscribers by now. Those of you in the farther reaches of our world may have to wait a little longer!. The following is a preview of the contents of this issue:

A Sweep Tuner for the VCO
A Grid-Dip Meter for VHF and UHF
A DIY Receiver for GPS and GLONASS Satellites; part-5
Frequency Doubling using Semi-Conductor Diodes
A 28/432 MHz Transverter
A 28/50 MHz Transverter
Receiving System Parameter Measurements using Radio Stars
A Big Wheel Antenna for 70cm

If you are not already a subscriber and are interested in becoming one and would like a sample copy please drop me a message.

Good reading ... Mike

As another poster pointed out, that was the cross-band
mode. I have always been able to exit the mode by repeating
the same [F] and [X] sequence that got me into it. Another
way I exit the mode is to chose one of the programmed memory
settings - [PM] followed by one of the 6 memories.

If it came up transmitting and would not respond, it must
have been receiving a signal and repeating it. Seems to me
I DID have trouble with that one.

Cross-band repeat is really useful, but needs some caution,
so as not to allow un-intended transmissions. I always use
it in one direction only, as a sort of wireless microphone.
It lets my HT roam the neighborhood while transmitting
via the TM733A at 10 watts. It's a good idea to make
the receive side of this arrangement secure with CTCSS decode
on the TM733A.

Kenwood's documentation on it is Application Note AAN-0009,
or take Jorge Flores' offer of that information by mail.
-Enjoy!

This is where some AGC both directions helps. If you have a friendly
broadcast (AM or FM) engineer locally ask about a surplus "Audimax" or
"Volumax" - if forget which, but one of those is a beautiful AGC
system.

>>Once you have established two way communications, tell them what you
>>need to report BRIEFLY. "There has been a car accident in East
>>Bunganuts. Over." Then let them ask you questions and give them
>>brief, to the point answers. They know what to ask.

With all the yuppies with cellphones, and the fact that 911 in most
areas is free, usually they already have the report. I always ask
something like "There has been a 2-car and fixed-object accident at the
corner of Walk and Dont-Walk in East Bungnuts - do you have it yet?
OVER"... If my call is a dupe, then I'll know, quick. If is is, then

I'll ask "Do you need any additional information?". If not, then I'm gone.
If it's not a dupe, then I'll ask "What info do you need and in what order?".
Generally the time it takes to ask is saved in the data entry. Saves
the operator having to replay the call for data entry after s/he hangs up.

>>The same type of guidelines would apply if you are calling another
>>station. Call them first and get an acknowledgment that they can
>>at least hear you. Tell them you have an emergency and ask if they

>Curtis, we'll have to meet sometime!
>Walt

One thing that one local radio club does is to have an program once a
year where a local agency - police or 911, I forget which, brings in a
video and a few cassette recordings of what not do do on the phone...
I.e. an overview of what goes on behind a 911 desk. Really worth it.

In the interest of time, I can point you to a company - Gamber-Johnson - but unfortunately I don't have phone number or address handy. They are related to the folks who make Larsen Antennas, so that might be a lead. The only place I've seen 'em advertise in the ham market is "CQ" magazine.

Gamber-Johnson makes a line of stacking mobile mounts (I have one) as well as a professional-grade quick disconnect, including models with N connectors. Recalling the literature I received (now *deeply* buried) about it, it probably will not require any mods to your rig.

A friend said that he read in the ARRL Handbook that they said not to use
Steel wire for Antennas. He asked me why, and I said, gee I don't know.
Maybe one of you do?

>
>Mark AA7TA

It is a bit foolish, isn't it. Why in the world
would anybody give up a Saturday morning each month
or two and get nothing for it in return?

Well, I have been an extra class VE for the last 3
years and have had nothing but positive responses
from the applicants. Most are appreciative of the
time that the VEs give during the sessions and many
say "thanks for your time" as they leave.

I became a VE to help spread the work load off the
others VEs who gave of their time and energy to
administer tests to me. For me, it is just "pay
back time".

There is one situation that I remember that bothered
me. A woman in her mid forties, I'd guess, came to
one session and passed her general and/or advanced
written. I could be wrong, but I got the impression
she was a house wife with no technical background
except that her husband was a ham. I was very happy
for her and thought highly of her ability to set a
goal and obtain it, even thought the material was
difficult for her.

One year later at the next annual ham fest, she was back
to take her written exam for the extra. I again was
elated until she presented her doctor's statement necessary
for the waiver of the 20 WPM code test.

I really don't have strong feelings about the code
being a requirement for any class liscense and would
not be upset if the requirement were dropped today.
However, as long as it is a requirement, I am really
dissapointed when people take the short cut with a waiver.

This womem (in my non-medically trained opinion) did not deserve a waiver. She appeared to be perfectly capable of mastering the code, but just didn't want to. I really hated signing her 610 and CSCE indicating an upgrade to the Extra, but had no choice. She followed the rules and was entitled to the license. However, I could not help but think about how long and hard I worked to master the code. The code did not come easy to me and I wondered if I would ever be able to copy at 20 WPM. However, after much pratice, I finally mastered it and now tend to use it more than and other mode.

Not to take anything away from the womem for passing the written tests. She did do very well there. I don't know if she really learned the material or just memorized the answers, but she passed with an almost perfect score. I just wish she would have tried as hard on the code.

AUGUST '95 "CQ" MAGAZINE HIGHLIGHTS

Here's what's scheduled to appear in the
August, 1995, issue of "CQ" magazine --
the Radio Amateur's Journal since 1945:

ANTENNAS, ANTENNAS, ANTENNAS
You can't make contacts without an antenna,
and the August issue of CQ is full of practical
antenna articles. Here's a sampling:

HOW TO BUILD LOW-COST VERTICAL ANTENNAS FOR
YOUR QTH, by Phil Salas, AD5X
Phil starts off with a lesson in aluminum tubing
and PVC pipe measurement, then sends us off to
our local home supply store to build a vertical
for nearly any band. (This is a follow-up to
Phil's June '95 CQ article, LOW-COST MOBILE
ANTENNA ACCESSORIES FROM PLUMBING PARTS)

A 75 AND 40-METER HORIZONTAL LOOP ANTENNA
by Sidney Rexford, W2TBZ
If you've got the room, CQ's got the antenna --
a horizontal quad loop that works well on both
75 and 40 meters.

THE 160-RV ANTENNA: A G5RV ADAPTER FOR 160 METERS
by Thomas M. Hart, AD1B
If you DON'T have the room, but still have the
urge to operate the "top band," Tom's article
will show you how to put a G5RV shortened dipole
to work on 160.

And for the rest of us...
ANTENNAS HATE ME! by John K. Munroe, W7KCN

Additional features include:
1995 CQ 160 METER CONTEST HIGH CLAIMED SCORES;

CQ REVIEWS for August include:
THE S&S ENGINEERING PC1 PROGRAMMABLE COUNTER,
by Paul Carr, N4PC, and
THE CUSHCRAFT ASL 2010 LOG-PERIODIC ANTENNA,
by Paul Carr, N4PC

August Column & Department topics are:
ANTENNAS & ACCESSORIES: BOOK NOOK - ANTENNA AND

COMPUTER NOTES, by Karl T. Thurber, Jr., W8FX
AWARDS: STORY OF THE MONTH - WILL PHILLIPS, VE3FNM, by Norm Van Raay, WA3RTY
BILL'S BASICS: INTERNATIONAL AGREEMENTS APPLICABLE TO AMATEURS, by Bill Welsh, W6DDB
CONTEST CALENDAR: CONTESTER'S GUIDE TO FINDING MULTIPLIERS; plus CONTESTS FOR AUG. & EARLY SEPT., by John Dorr, K1AR
DOUG'S DESK: SOME ANTENNA TUNER TIPS, by Doug DeMaw, W1FB
DX: NORTH KOREA, by Chod Harris, VP2ML
MATH'S NOTES: EASY-TO-IMPLEMENT, GENERAL-PURPOSE AUDIO AMPLIFIERS, by Irwin Math, WA2NDM
PACKET USER'S NOTEBOOK: WHAT'S A K-NET? by Buck Rogers, K4ABT
PROPAGATION: SUNSPOT PLATEAU, DX CHARTS FOR AUG. 15TH THROUGH SEPT. 15TH, by George Jacobs, W3ASK
RADIO FUNDAMENTALS: A SIMPLE MULTIBAND ARRAY FOR 7, 10, 14, 18 AND 21 MHZ, by Bill Orr, W6SAI
VHF PLUS: LESSONS LEARNED FROM THE OKLAHOMA CITY BOMBING ROVER OPERATION, by Joe Lynch, N6CL
WASHINGTON READOUT: INFORMATION BULLETIN BROADCASTING ON THE AMATEUR BANDS, by Frederick O. Maia, W5YI
WORLD OF IDEAS: QRP ALIVE WITH THRILLS AND DX! by Dave Ingram, K4TWJ

The August issue of CQ - THE RADIO AMATEUR'S JOURNAL should be on newsstands and in subscribers' mailboxes by late July.

ARRL Bulletin 68 ARLB068
From ARRL Headquarters
Newington CT July 13, 1995
To all radio amateurs

SB QST ARL ARLB068
ARLB068 Fines for 4 amateurs

Four amateurs cited by the Federal Communications Commission for malicious interference on the 2-meter band have had the amounts of their monetary forfeitures adjusted.

The four, all in the New Orleans area, were cited for transmissions made in the spring of 1993. In September 1993 all four received Notices of Apparent Liability from the FCC's New Orleans office. The FCC, after reviewing responses from all four, then issued Notices of Forfeiture in November 1993, all in the amount of 2000 dollars. All four appealed the NOFs.

While these appeals were pending, the Court of Appeals for the D.C. Circuit vacated the forfeiture guidelines that the New Orleans Field Office had followed in the forfeitures, and on reconsideration, the FCC's Compliance and Information Bureau reduced them.

On July 10, 1995, the FCC issued Orders in all four cases, noting that the cases were based on information provided by the Amateur Auxiliary, and saying that ''use of amateur volunteers for the purposes of monitoring violations in the amateur service is permitted by the (Communications) Act. In fact, the amateur radio community has distinguished itself for its self policing operations.''

The FCC reduced the fine for Joseph F. Richard III, N5JNX, from 2000 dollars to 1000 dollars, rejecting his contention that tape recordings used by the FCC in the case are ''inaccurate or misleading.''

Vernon Paroli, KA5OWW, had his forfeiture amount reduced to 700 dollars, based on his claim of being financially unable to pay the 2,000 dollar forfeiture originally assessed.

The forfeiture amount for Will T. Blanton, N5ROC, was reduced from 2,000 dollars to 1,000 dollars. That of John B. Genovese, WB5LOC, was lowered to 500 dollars, because of the shorter duration of his transmissions.

ARLB069 5 GHz petition opposed

ZCZC AG36
QST de W1AW
ARRL Bulletin 69 ARLB069
From ARRL Headquarters
Newington CT July 13, 1995
To all radio amateurs

SB QST ARL ARLB069
ARLB069 5 GHz petition opposed

The ARRL has filed comments on a petition for rule making that would allocate 300 MHz of spectrum in the 5-GHz band, an action that would affect the Amateur Radio Service.

The petition, by Apple Computer, Inc, seeks 150 MHz, at 5150 to 5300 MHz, and 5725 to 5875 MHz. Amateurs currently have access to the entire range 5650 to 5925 MHz on a shared basis.

The Apple petition, RM 8653, seeks the spectrum for a new, unlicensed radio service that the League called ''essentially unregulated, save for certain technical rules,'' and that proposes the use of directional antennas and relatively high power, and protected allocation status in shared bands by ''non-technical persons.''

And in defense of the Amateur Radio allocation in the 5-GHz band the ARRL cited activity in a number of metropolitan areas around the US.

The League said the petition doesn't show why 300 MHz is necessary for such a service (and why existing allocations are not sufficient); why existing wireless and wireline services aren't sufficient; and why a proceeding such is this should not wait until current proposals on such services are resolved.

The ARRL also said the petition fails to consider compatibility between the proposed new radio service and other services (including Amateur).

>
> Butch KF5DE

Well Butch you caught the typo.Yes it should read below 30 MHz.
Regarding the rest of your concerns. Over 350 hams thought the Vanity Callsign issue was important enough to vote on, and scores of hams e-mailed their support. They saw the potential the WWW has to survey large groups of people in real time.The league itself asks hams to fill out survey questions from time to time. Should no one else have that right? When over 350 hams express an opinion on a topic I believe it has some value. It should be noted that the Ham Poll is new and should increase its survey numbers as more hams become familiar with it, and are able to access the Web. Everthing needs time to grow.73's Ray

: > up on the output frequency to continue the net, I will invariably
: > get a few that never knew what hit because we everyone came up
: > on simplex and no PL. Nothing to decode, nothing to hear!

Net control should operate with the ctcss tone and advise all stations to
do the same. It is ok to use ctcss encode on simplex.

: This is the reason that I have resisted requests by users to have our
: repeaters transmit PL. Those using PL decode eventually get lazy and
: don't MONITOR the frequency before transmitting.

What are they monitoring? They will hear the repeater just fine! If
there are users in the group talking on the output maybe they should be
trained to transmit the same ctcss tone if they want to be heard.

Our repeater has several ctcss tones enabling several different groups to
monitor for their individual group traffic.

: We use PL decode on our PLMR equipment. But a mobile automatically
: goes into carrier squelch (monitor) when the mic is removed from the
: mic clip. Portables use "tx inhibit on busy channel" to prevent a user
: from keying up on traffic using a different PL or operating simplex.
: It more or less forces people to monitor.

We do the same thing by changing memory channels on an amateur radio.
CH 1 is encode only on the repeater
CH 2 is encode decode on the repeater
CH 3 is encode simplex on the repeater output

Groups monitor channel 2 for their traffic and switch to channel 1 when
using the repeater. We find most folks are on ch 1 most of the time and
switch to ch 2 rather than turn the radio off.

In other words Channel 1 is the same as taking the mike out of the hang
up clip on a commercial radio, The user hears everything on the frequency.

Your users that want the repeater to transmit ctcss are tired of
listening to all the nuisance interference from pagers and other distant

repeaters. More people will monitor the repeater if it is a quality signal.

I would say the repeater tech committee is LAZY if they can't impliment a simple ctcss tone on the repeater transmitter. The clever techs usually drive the repeater tone only when a signal is present on the input. That way the members do not need to hear all the beep boops and talking ids. You would be surprised how many hams and their families come back and really monitor.

Bob

756. 144,432 TROPO OPENING

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: Chuck KD9JQ <reichert@cig.mot.com>
Message-ID: <199507131411.KAA23196@po_box.cig.mot.com>
Source record: 242386

The only good side effect of this heat wave is the excellent tropo conditions on 144, 432. I don't have 220 or 1296 but suspect it's good up there too!

Conditions started to open up late Monday night here in the Chicagoland area and have been getting better as the heat/humidity builds.

Last night worked into EN36, EN-13, EM25, EM-14, EM-17, EM-35 as a general distance from here. Signals varied from S1 to S9+20. Did work EN-36, EM-36 EN-13, EM-29, etc on 432. Caught Larry N0LL this morning about 12:45 GMT into EM-09 on 2 and 432.

I suspect the bands will stay open all day and get even better tonight and move more to the east.

The signals build in waves then seem to fade out quickly but do reappear again in about 15 minutes.

Hope to see you on 2 & 432...maybe 6 if it opens up again.

73 Chuck KD9JQ EN-52

I'm trying to help get rid of some aluminum antennas for the widow of a ham friend of mine. Apparently several of his antennas were assembled without benefit of an anti-oxidizing joint compound, and they are REALLY frozen together.

One of them's a vertical that's 30+ feet long, and there's no way I can transport it fully assembled! Does anybody know a way (chemical, thermal, etc.) to un-stick these antennas?

761. CW REQUIREMENTS

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: roland.stiner@hobbs.com
Message-ID: <8AD24FC.00290010CD.uuout@hobbs.com>
Source record: 242512

It would be interesting to see if someone could post a list
of the CW requirements for each, or let me say, as many
countries as possible so that we can see what other
Amateur Radio Operators have to do to get their licenses.

762. Re: Emergency communicating on repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: rwilkins@ccnet.com
Message-ID: <3u2lej$i6t@ccnet3.ccnet.com>
Source record: 242513

Curtis Wheeler (cgwh@chevron.com) recently wrote
in <3u1cv9$d86@gaudi.lahabra.chevron.com>:

: I really don't care how many people monitor the repeater. And I don't
: think you really know why the users on our system want anything. If
: they want to go somewhere else, I won't stop them.

Most Amateur repeater owners provide a service to their amateur community.
Check with your corporate marketing department if you want to learn how
to assess and provide the needs of your customers or users. Universal...

: > You would be surprised how many hams and their families come back and
: > really monitor.

: Is this an open system? Sounds like some of your users are pretty
: well informed if they follow all of this. We operate an open system
: and try to keep it simple. We don't want to have to educate every
: user. The point is that it is bad operating prcatice not to monitor
: the frequency before using it - even if you think everyone else on the
: frequency is using your system. There might be traffic on the
: frequency that is not using PL. And you end up with people that will
: stop monitoring or just forget to do it. Everyday generic users will
: sometimes get sloppy. We are a casual system.

Are you talking about using an amateur repeater or a commercial oil
pipeline repeater? Please give some credit to your fellow amateurs.
Please take some time and look at what others in your area are doing to
make all those intermod laden radios a pleasure to listen.

: As far as quality signal goes... Anyone receiving interference on a
: repeater output freq that would cured by CTCSS shouldn't be blaming
: the repeater. Blame it on the rice rocket radio capable of DC to
: light receive. I have very little problem with intermod on my
: Yaecomwood FT-TM-IC-XYZ - I keep the squelch turned up all the way -
: if the repeater can't break the full squelch setting, I am not
: going to have a very good signal into it anyway.

If you are an Amateur and you are the one providing a sevice to your
community, you will look at the conditions that the users of the system
have to monitor. The commercial boys that sell air time figured this out
years ago.

You may miss some weak signals using your tight squelch method.

: I am not interested in telling the users how they should program
: thier radios or use memory slots. We publish the freq with a standard
: split and required buzz. That's all you need.

No, thats all the service to the user _you_ want to provide. The tone on the repeater output can be used by those users that understand simple principles. The rest do not need to use this feature. It is really transparent. It really enhances the repeater for those who regularly monitor. It doesn't restrict usage, in fact some new tranceivers can automatically decode your tone and set the transmit tone correctly. They have made it a no brainer. Your casual travelling hams with these radios will love it! They don't need to look in the repeater directory for your tone.

: Closed systems are another matter. When you limit access to your
: system, you can diseminate special info to your users more easily.

Open systems are able to give this common information freely on the air. Ctcss tone does not close a repeater it tends to enhance its operation.

: BTW - we are not a club, so there is no "tech committee" and the
: users don't attend meetings where we explain anything to them. No
: invitation is required to our repeaters (you can be uninvited for
: being a troublemaker). There are no "members".

Is this one of those two man beep boop boxes? Talking mantle clock?

: You need to remember that systems and users are different. Different
: systems have different requirements. What works well on your system
: might cause trouble on mine.

Systems are comprised of the repeater and its users. Any system that works well is a pleasure to monitor. I can't imagine the trouble you or your users would experiance. What are your requirements that differentiate your Amateur system from any other?

I am not trying to be a trouble maker and hopefully other repeater owners may see some logic in using ctcss technology to enhance their systems. I didn't realize someone could be uninvited from an open repeater. In our area you are invited on closed repeaters. You would be welcome on ours.

I know 1 or 2 felons (at least they say they are) who have ham tickets.

I dont recall anything in the rules prohibiting it.

I think the FCC can deny you a license if they think you are a bad guy.
(couched in appropriate bureaucratese/legalese, of course.)

Take the test, don't lie on any of the forms, and see if the license shows
up.

Here in Britain there is a prison hospital called Broadmoor
(where they lock up some of our worst psychos)...

I believe it is the first prison to teach Amateur Radio to
its inmates.

I'm not sure which notorious convicts are getting their licences.
Those details are probably sensitive and/or classified.

Yea,
I really miss having to drive 80+ miles to the nearest semi-annual
exam given by the FCC. I really miss having only 1 chance to suceed, they
don't give wimps a second try. I really miss being told to re-register to
take a code test next time, when i only signed up for the Advanced written.
I really miss the examiners not know anything about Ham radio, just
there to grade exams.

>Sorry, I'm real active now as an INVOLVED CONTRIBUTING examiner,
willing to HELP the new hams not complain about how "good" it was..

SUBJECT: POP'COMM 8/95 HIGHLIGHTS

POPULAR COMMUNICATIONS
August, 1995, Cover Story

"THE PAGER INSIDER --
Did You Know These Facts?"
By Danny Burnstein
©1995 CQ Communications, Inc.

Beepers have become the communications tool of the 1990s. And why not? Not only do they keep you in touch with the office, family and friends when you are on the go, they are also compact, come in an array of fashion colors and styles, and many even offer special functions.
This month's "Popular Communications" cover story goes beyond explaining why it is good to carry a beeper. It also answers questions about pagers that nearly every user has wondered about from time to time.
Learn how messages are sent through beepers; how to receive special services, i.e., sports and news; how to monitor beeper channels, coverage aspects, even fees for specific ranges and area coverage.
"The Pager Insider" will tell you everything you would ever want (and need) to know about pagers, and then some. So, if you're thinking of buying a beeper, it might help to read this article before you make your purchase.
It starts on Page 8 of the August issue of "Popular Communications."

(POP'COMM cover story profiles by Deena Marie Amato, Associate Editor)

HERE'S WHAT ELSE IS FEATURED IN THE AUGUST, 1995 ISSUE OF "POPULAR COMMUNICATIONS":

DECODING NON-VOICE PAGER MESSAGES
by Tom Kneitel, K2AES, Editor
How to read the hidden traffic of digital

paging signals.

MOVIN' ON UP!

AUGUST '95 "CQ" MAGAZINE HIGHLIGHTS

Here's what's scheduled to appear in the
August, 1995, issue of "CQ" magazine --
the Radio Amateur's Journal since 1945:

ANTENNAS, ANTENNAS, ANTENNAS
You can't make contacts without an antenna,
and the August issue of CQ is full of practical
antenna articles. Here's a sampling:

HOW TO BUILD LOW-COST VERTICAL ANTENNAS FOR
YOUR QTH, by Phil Salas, AD5X
Phil starts off with a lesson in aluminum tubing
and PVC pipe measurement, then sends us off to
our local home supply store to build a vertical
for nearly any band. (This is a follow-up to
Phil's June '95 CQ article, LOW-COST MOBILE
ANTENNA ACCESSORIES FROM PLUMBING PARTS)

A 75 AND 40-METER HORIZONTAL LOOP ANTENNA
by Sidney Rexford, W2TBZ
If you've got the room, CQ's got the antenna --
a horizontal quad loop that works well on both
75 and 40 meters.

THE 160-RV ANTENNA: A G5RV ADAPTER FOR 160 METERS
by Thomas M. Hart, AD1B
If you DON'T have the room, but still have the
urge to operate the "top band," Tom's article
will show you how to put a G5RV shortened dipole
to work on 160.

And for the rest of us...
ANTENNAS HATE ME! by John K. Munroe, W7KCN

Additional features include:
1995 CQ 160 METER CONTEST HIGH CLAIMED SCORES;

CQ REVIEWS for August include:
THE S&S ENGINEERING PC1 PROGRAMMABLE COUNTER,
by Paul Carr, N4PC, and
THE CUSHCRAFT ASL 2010 LOG-PERIODIC ANTENNA,
by Paul Carr, N4PC

August Column & Department topics are:
ANTENNAS & ACCESSORIES: BOOK NOOK - ANTENNA AND COMPUTER NOTES, by Karl T. Thurber, Jr., W8FX
AWARDS: STORY OF THE MONTH - WILL PHILLIPS, VE3FNM, by Norm Van Raay, WA3RTY
BILL'S BASICS: INTERNATIONAL AGREEMENTS APPLICABLE TO AMATEURS, by Bill Welsh, W6DDB
CONTEST CALENDAR: CONTESTER'S GUIDE TO FINDING MULTIPLIERS; plus CONTESTS FOR AUG. & EARLY SEPT., by John Dorr, K1AR
DOUG'S DESK: SOME ANTENNA TUNER TIPS, by Doug DeMaw, W1FB
DX: NORTH KOREA, by Chod Harris, VP2ML
MATH'S NOTES: EASY-TO-IMPLEMENT, GENERAL-PURPOSE AUDIO AMPLIFIERS, by Irwin Math, WA2NDM
PACKET USER'S NOTEBOOK: WHAT'S A K-NET? by Buck Rogers, K4ABT
PROPAGATION: SUNSPOT PLATEAU, DX CHARTS FOR AUG. 15TH THROUGH SEPT. 15TH, by George Jacobs, W3ASK
RADIO FUNDAMENTALS: A SIMPLE MULTIBAND ARRAY FOR 7, 10, 14, 18 AND 21 MHZ, by Bill Orr, W6SAI
VHF PLUS: LESSONS LEARNED FROM THE OKLAHOMA CITY BOMBING ROVER OPERATION, by Joe Lynch, N6CL
WASHINGTON READOUT: INFORMATION BULLETIN BROAD-CASTING ON THE AMATEUR BANDS, by Frederick O. Maia, W5YI
WORLD OF IDEAS: QRP ALIVE WITH THRILLS AND DX! by Dave Ingram, K4TWJ

The August issue of CQ - THE RADIO AMATEUR'S JOURNAL should be on newsstands and in subscribers' mailboxes by late July.

You may contact CQ Online at any of the following addresses:

Source record: 242528

Well,

The preamp in the anplifier is indeed a useless feature,
unless you are in the unhappy situation of owning a particularly
deaf receiver (which does happen, see the other reply)

Otherwise it is likely to *degrade* signal to noise, since
HT's with wide RX coverage are quite prone to overloading anyway,
and the extra preamp will surely enhance overloading.

Of course some clever people put the amp/preamp combination
before any long antenna cable and controll it remotely,
and than it will certainly help.

73, Moritz DL5UH

Hi all. Anyone seen the new ICOM rig, the IC-706 "in the flesh" yet?

Lots of publicity here in the UK in the mags and I have the advertising sheets from ICOM but the rig itself will not be in the country till August.

Guess there won't be any reviews for a while.

As I understand, it is not yet FCC approved for use in the US.

Looks an interesting rig with 100W HF and 6m, 10W 2m all mode.

BZZT Sorry, but you are mistaken. Since the United States has joined the Berne Convention, any writing is automatically copyrighted once it is committed to tangible form. Registration is not required. Email is considered a tangible form.

But, thanks for playing. We have some lovely parting gifts. Johnny?

Tom Childers <l241145@cliffy.lfwc.lockheed.com> wrote:

:>I liked it better when the FCC gave the exams. Just a comment from an
:>old curmudgeon :-)

I have to say I did too. FWIW my Novice exam was given to me by one advanced class ham and then obtained my General and Advanced tickets at the FCC Field Office in New Orleans...had to sign KA5MWD Interim O-R back when I got my General. Anyway had to travel 75 miles to get there...1. I had a car. 2. I had shoes. 3. It doesn't snow very often down there. 4. The terrain is fairly flat. ;-D

Didn't have any question pools (yeah there was Dick Bash) then but the time between testing (minimum of 30 days) was well spent learning more electronic theory and practicing live code operations. None of this hurry up and learn so I can test tomorrow and the next day stuff. [Remember all the cards and poster and whatever you had on your walls and under glass on the desk and how many times you practiced your code by sending every letter from them with your key? Did anyone not do that back then?]

Took me eight months to go from Novice to General (skipped Tech) and then another year before I got my Advanced. Now, it took me seven years to get my Extra. Why?!? Because of my lack of faith in the integrity of the VE system. It took some talking to by HL9CK (God rest his soul)[I forget Charlie's US callsign] to get me to take a test with the VE team at Osan Korea. I passed the code but not the written. Then after getting to New Mexico it took me two tries to pass element 4B.

After Charlie's talk I even became an Advanced class VE. Some time after getting my Extra in 1990 I took over the VE teams (ARRL and W5YI) in Alamogordo, New Mexico. Anyone who thinks like I did that there is no integrity to the VE system really has no idea what they are thinking about. Yeah, the So.Cal. deal, and the Dallas, TX and Puerto Rico things will probably pop up but how many times have you thrown out the whole barrel of apples because of three rotten ones?

And then there was the time I saw one individual get his Extra class ticket by having a waiver signed by a doctor (who probably had no idea what he was signing) because the individual had had a coronary by-pass. One of my VE team members who'd had a quadruple by-pass commented that he could copy code very well...and he could too. But it wasn't to us to discuss the validity of the signature or the individul's ailment. We almost didn't test this individual on the written because he'd had an attitude and even DEMANDED we had to test him. He came awfully close to being thrown out of our session. Every time I tell this story I wish I could go back just to throw him out. Oh well.

Just thought I would share my buck-three-eighty's worth.

Oliver,

I have both the FT-11r and the FT-51r. Both are great radios. I have had a few and these were the ones I will keep and continue to use. The FT11 is the smallest FULL featured radio you will find. There is now a software/hardware (cable) interface available to program the radio via RS232 and a computer. This feature alone would convince me to purchase one. It also has great intermod rejection and as far as mod's, it has expanded recieve right out of the box. You can mod it for transmit through it entire RX range via a SMT jumper. I have no complaints about the radio.
You won't regret the purchase!

Regards,
Casey Romanski

791. GB2RS News 16th July 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <805685868snx@llondel.demon.co.uk>
Source record: 242542
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 16th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with this week's headlines:-

The 1996 RSGB President has been elected;

It's been a bumper week for Sporadic E on 50MHz;

And North Korea has been added to the DXCC list.

At its meeting on Saturday, the 8th of July, the Council of the RSGB elected Peter Sheppard, G4EJP, as the Society's President for 1996. He is currently Zonal Council Member for the North of England.

Last week we reported record-breaking tropo openings affecting all bands from VHF to microwaves. Now comes news from Geoff Brown, GJ4ICD, of spectacular Sporadic E conditions on 50 MHz. On the 8th of July over twelve hours of sporadic E to the USA was observed. The opening extended as far as Venezuela to the south and Greenland to the north. Geoff comments that this was: "probably the biggest 50 MHz Sporadic E opening to the USA since 1986." More news on the recent Sporadic E openings will be given in the propagation news at the end of the main part of this news bulletin.

The 10 GHz beacon, GB3SCX, located near Swanage in Dorset has returned to operation with a higher antenna. Much improved reception has been reported. The beacon, which runs approximately one watt EIRP, is located 200 metres above sea level at locator IO90AP11. The nominal frequency of operation is 10368.900 MHz, although it is currently 4.1 kHz low. The exact frequency will be monitored and can be obtained by phoning G4JNT on 01489 787424.

The 2 metre repeater at Brighton, GB3SR, on channel R0, returned to operation on the 5th of July. It had been off the air due to a transmitter failure which occurred on the 29th of June.

The 1995 AMSAT-UK Colloquium will take place between the 27th and 30th of July at the University of Surrey in Guildford. The event offers something for all satellite enthusiasts, with the emphasis on helping beginners get started. A demonstration station will also be available to allow the opportunity of making contacts via the Oscar satellites. The Colloquium is ticket-only so it is important to contact Ron Broadbent MBE, G3AAJ, on 0181 989 6741, for a booking form.

The IEE will be holding an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September. One of the sessions, entitled 'Tuning and the Amateur', is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. Lecturers at the conference will include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme. For further details write to Conference Services, IEE, Savoy Place, London WC2R 0BL as soon as possible, or telephone 0171 344 5477.

Now news of some special event stations on the air this week:

The Leiston Amateur Radio Club is operating GB100NT from Orford Ness this weekend, the 15th and 16th of July, in order to celebrate the 100th anniversary of the National Trust. This is one of a series of events from National Trust locations throughout the country which are planned for the summer months. Next weekend, the 22nd and 23rd, the Dragon Amateur Radio Club will operate GB100NT from Penrhyn Castle.

The Wolverley and District Amateur Radio Society is running GB5WF during the Wolverley Festival from Friday the 14th until Sunday the 16th of July.

GB4AFS will be on the air from the Air Formation Regimental Families Day at Collerne near Chippenham, Wiltshire, on Saturday the 22nd of July.

The ARRL DXCC desk has announced that the Democratic People's Republic of Korea - North Korea - has been added to the DXCC countries list. Top DX-er Martti Laine, OH2BH, is planning an operation from North Korea in the next few months.

Now a note for your diary: The 1995 RSGB International HF Convention will take place at Old Windsor in Berkshire from the 8th to the 10th of September. The event will feature many lectures and presentations from some of the world's top HF operators and DXers, including ARRL Membership Services Manager Chuck Hutchinson, K8CH, who will show a series of slides of ARRL headquarters and their impressive club station W1AW. He will explain how the DXCC rules are made and changed. For further details of the RSGB HF Convention, see July RadCom, page 35. For comprehensive details of the lecture programme and booking details please contact Marcia Brimson at RSGB Headquarters on 01707 659015.

Next some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Libya, the 5A3UY and 5A2UA activity has been delayed, but 5A/UT3UY was reported on 14210kHz on the 11th of July. The two Ukrainians are believed to be on an official visit after an invitation from the Bureau of Communications. They will return to Kiev on 24 July.

From Angola, Peter, ON6TT is active as D2TT once again on 160 to 10 metres, with the emphasis on the LF and WARC bands on SSB and RTTY.

And from Bermuda, G3AVJ is operating as G3AVJ/VP9 until Wednesday the 26th of July. Check 14133 kHz, plus or minus QRM, in late afternoon and

early evening.

Next the Rally News:

The RAIBC Romsey Picnic takes place at Broadlands, Romsey, in Hampshire today, Sunday the 16th of July. The event features a junk sale, bring and buy stand, refreshments, and a grand draw. Everyone is welcome, and talk-in is on 2 metres channel S22.

Also today, the 16th, the Norfolk Raynet Barford Rally is taking place at the Village Hall, Barford, on the B1108 Norwich to Watton Road. The event features trade stands, a raffle, and refreshments etcetera. The doors open at 10.30 am and talk-in is on 2 metres channel S22.

And the McMichael Rally also takes place on Sunday the 16th at the Haymill Youth and Community Centre, near Burnham Railway Station, on Burnham Lane, Slough. The event features a car boot sale and the doors open at 10.30 am. Talk-in is on 2 metres channel S22.

Next Sunday, the 23rd of July, the Colchester Rally will take place at St Helena School, Sheepen Road, Colchester. There will be a wide range of traders, an amateur radio car boot sale, a bring and buy stand and RSGB Morse tests on demand. If you wish to take your Morse test at the rally, please bring two passport size photographs and the appropriate fee. Please note that the doors open at 9.30 am, half-an-hour earlier than the time stated in the Events Diary in RadCom. Talk-in will be on 2 metres, channel S22 and further details may be obtained by calling Richard, G7BIV, on 01376 571239.

The Humber Bridge Amateur Radio Rally will take place at the Exhibition Centre, Freightliner Road in Hull on Sunday the 23rd of July. There will be two large halls with a bring and buy stall and Morse tests will be available on demand. Don't forget to take two passport-size photographs if you want to take your Morse test at the rally. The doors open at 11.00 am and talk-in will be on 2 metres channel S22. For further details, contact Roly, G0UKS, on 01482 837042.

The Outdoor Boat and Leisure Show at Powderham Castle near Exeter, Devon, on Sunday the 23rd of July will feature a large amateur radio section. For further details, telephone 01626 890243.

Now for the HF contest news:

The RSGB Low-Power Field Day is taking place today from 0900 to 1200 and 1300 to 1600 UTC. It is a CW-only Portable contest, and the full rules can be found in the May 1995 RadCom.

Next some VHF contest news:

One of the RSGB's major VHF contests, VHF Field Day, took place over the weekend of the 1st and 2nd of July. David Johnson, G4DHF, Chairman of the VHF Contests Committee, reports that conditions were very good, with tropo and Sporadic E providing many DX contacts such as GM to EA5, and G to SP, OK, OM and Northern Scandinavia on 2 metres. There are some very

high scores on 2 metres, 70 centimetres and 23 centimetres. The quality of signals and standards of operating were generally very good - a number of stations were inspected and all were found to be operating within the spirit and rules of the contest.

Next Saturday, the 22nd of July, the RSGB 144 MHz low power and SWL contest takes place. And on Sunday the 23rd, the RSGB 432 MHz low power and SWL contest takes place. The rules for both events can be found in the May RadCom.

And now the solar factual data:

The period from the 3rd to the 9th of July saw solar activity mostly at very low levels and the geomagnetic field quiet throughout. Transatlantic openings to North America on 50MHz took place on most days. Sunspot numbers increased from 20 on the 3rd to peak at 52 on the 6th, with a mean of 36. Solar flux levels remained steady and averaged 80 units. Several small B class flares took place on the 4th, then on the 8th a B9/SF flare occurred. The electron fluence declined slightly but remained at moderate levels. X-Ray flux averaged A4.9 units. The 90-day solar flux average on the 9th was 77 units, one unit up on last week, but this upward trend is not expected to continue. Geomagnetic conditions were quiet and averaged Ap 7 units. The quietest day was the 9th, with levels down to Ap 5 units.

Now an extended report from the British Geological Survey covering the period from the 20th of June to the 3rd of July. Levels declined from 32.0 nanoTeslas on the 20th to 8.8 nanoTeslas by the 24th. The average up to the 26th was 20.5 nanoTeslas, just K3. From the 27th, levels increased to peak at 40.2 nanoTeslas before declining to unsettled levels for the rest of the period. The average was 18.6 nanoTeslas, about K2. Bartell's rotation number 2212 starts on the 20th of July.

I'll repeat the figures: Spots - 36, Flux - 80, Ap index - 7, X-Ray flux - A4.9.

Now the ionospheric data for central France. F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 30th of June to the 6th of July, saw levels increase from 5.5 MHz on the 2nd to 7.1 by the 6th, with an average of 6.3MHz. The darkness hour lows increased from 2.9 to 3.9 MHz by the 5th, with an average of 3.4 MHz The daytime highs took place at 0900 on the 30th, but returned to the more normal time of 2100 for the rest of the period. The darkness hour lows took place between 0300 and 0400 hours every day.

G4FVP in County Durham reports that the 1995 sporadic E season continues to bring surprises. Most notable this week have been the daily openings to the USA, Canada and the Caribbean, from the 4th to the 8th. These have followed a regular pattern, with openings between 1200 and 1400, followed by evening openings commencing as early as 1700 and lasting until midnight. The lunch-time openings have favoured the eastern USA, whilst the evening openings have been more widespread, including Puerto

Rico and Venezuela. There is little doubt that this prolonged period will long be remembered. The mechanism of multihop Es still remains a mystery, but the regularity of these openings suggest that conditions can prevail for many days with distances of 9000km being worked. Path loses must be minimised, suggesting that a chordal mechanism may be involved? Surprisingly given the good conditions to the west, the paths into Europe have been quite poor except on the 2nd of July.

I'll repeat the figures: highs - 6.3MHz, lows - 3.4MHz.

And lastly the solar forecast.

This week with the quieter side of the sun looking our way, solar activity is expected to be very low, and solar flux levels are expected to be in the low 70s. Geomagnetic activity is expected to be 'unsettled' to 'active' for the next couple of days before declining to quiet levels for the rest of the week. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, though levels could increase slightly later in the week. The darkness hour lows are expected to be about 12MHz. Transatlantic sporadic E openings on 50MHz could well still take place, along with openings into Europe.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Foxtrot and G7 Uniform Sierra series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Echo series.

Yeah, I realized that there's a bunch of stuff around there, but these
were telephone conversations.. But to be honest I'm now not sure how
many of them were actually cordless or which ones were cellular images.

797. Local Antenna Restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: jerryk@best.com
Message-ID: <3u3upn$c7c@shell1.best.com>
Source record: 242548
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.antennas

Hi,

I'm considering buying a house in the Emerald Hills section of
Redwood City, California. One of my concerns is that I be able to put
up a decent antenna. At this point in my life, a "decent anntenna"
means something on the order of a 50-foot crankup tower topped by a
tribander.

So before even thinking of making an offer, I went down to the county
planning office to see what antenna restrictions there might be. This is
what they told me:

* If it's detached from the house, a tower can be up to 19 feet tall.
* If it's attached to the house, the tower can be up to 36 feet tall.
* If its on top of the roof, the top point of the tower can be 36
feet above grade.

I find these restrictions unnacceptable :-(.

Exceptions can be had by applying for a "use permit". A "use permit"
involves a public hearing, an application fee of $1540.00, and a wait of
five months.

So I wonder if anybody can answer me a few questions?

1) Local folks: what are the antenna regs in *your* community?
Are there any SF Peninsula places especially friendly to hams?

2) What's the current status of the FCC pre-emption of local zoning
regulations? Could it somehow prohibit the county from making me
apply for a "use permit"? The issue here is not CC&R's, but
rather county zoning rules.

Please excuse the cross-posting - I wanted the largest possible audience
for this post; it's somewhat urgent because the XYL wants to know ASAP
if she can have the house :-). Followups are directed to r.r.a.policy.

- Jerry Kaidor, KF6VB (jerry@tr2.com)

> Maybe one of you do?

Brad main reason is it rust's. and is very hard to solder to.
Course Your going to hear about radiation resistence and many other things.
but that will only account for a small loss in transmission or reception.
Before the many bring up using stainless or how to solder to steel. I know how

Hi,

I'm an instructor in electrical engineering, and I want to assign a project to some students using a simple AM transmitter and receiver.

What I'm wondering, though, is whether there are any bands allocated for this (preferably under 30MHz) since these students won't have any amateur licenses. The transmitted power will be low, under 100mW probably.

Thanks.

Francis A. Ney, Jr. (croaker@access.digex.net) recently wrote
in <znr805576214k@Digex>:

: Point of Information.

: What specific use is station N6FRI making of the 5.7 GHz band?

While some Amateurs are willing to give up their spectrum to an unregulated "Part 16" environment, WE are using the band. N6FRI and other Amateurs have used the band since 1968 to intitially link their 2 meter and 440 repeaters. You may want to read the articles published in the ARRL QST for some information of the San Francisco Bay Area group of 5.7 GHz network Amateurs.

One good article was written about the use of 5.7 GHz in the cover story about the Berkeley Hills Fire. Amateurs were able to provide T1 service to the Incident Command Center located in the fire zone, miles from the nearest utility. This is emergency communications at its finest.

Amateurs were able to provide that "last mile of service" so commanders could communicate with their computers in Sacramento. All of this took place in an urban hilly setting as the fire storm destroyed over three thousand homes.

We have been doing what Apple and other market makers are dreaming of doing. Now would you be willing to give "Part 16" status to a one MHz window in the middle of the two meter band? Sure you would if you had no interest in the band. Lots of money to be made .. right?

Maybe some amateurs have a pecunary interest in moving to "Part 16" ?

>
>You didn't address my question (you didn't even come close!). Why
>be dependent upon the manufacturers?
>
Why be dependent up on the manufacturers? Simple, because amateurs radio
operators no longer make their own equipment. For the most part they are
at the mercy of the manufacturers. The hobby is market driven in most
cases. I know in SO CA where 220 is popular (in contrast to many other
regions) where the availibility of 220 repeaters still makes the purchases
of 220 equipment but this is not the case in all areas.

The neato bells and whistles of equipment from the factory have
replaced the home brew stuff. Those that are still into making homebrew
stuff are in the minority and as time goes on will lose their influence
in the hobby.

Special Bulletin 29 ARLX029
From ARRL Headquarters
Newington CT July 13, 1995
To all radio amateurs

SB SPCL ARL ARLX029
ARLX029 Record set at 3456 MHz

Extraordinary conditions for tropospheric propagation in the US Midwest have resulted in a new overland record on the amateur 3456 MHz band.

At 1224 UTC on July 12, Al Ward, WB5LUA, in Allen, Texas, worked Gary Morhlant, WA0BWE, in Maplewood, Minnesota, a distance of 841 miles. The previous record of 736 miles was set on May 1, 1992, between WB5LUA and W9ZIH, in Malta, Illinois.

As is often the case, this record-breaking activity began lower in frequency, with an initial contact between WB5LUA and WA0BWE on 432 MHz, with signals ''59'' both ways, according to Ward. An equipment problem forced them to skip 1296 MHz (where the overland record is 1287 miles).

2304 MHz came next, and the first Texas-Minnesota 2304 MHz QSO (where the record is 940 miles). Contact was then ''easily established'' on 3456 MHz. WA0BWE was running about 5 watts; WB5LUA was running 100 watts to a 5-ft dish at 65 feet.

On July 13, excellent tropospheric propagation continued in the midwest, with perhaps more distance records to come as a result. Thanks to WB5LUA for prompt reporting of these developments.

From ARRL Headquarters
Newington CT July 13, 1995
To all radio amateurs

SB SPCL ARL ARLX030
ARLX030 N9MEZ Young Ham of Year

Adam Weyhaupt, N9MEZ, has been named the 1995 ''Young Ham of the Year,'' an award jointly sponsored by Amateur Radio Newsline, Yaesu USA, and CQ Magazine.

15-year-old Adam is the third winner in five years from the St Louis area. According to Bill Pasternak, WA6ITF, of Newsline, he was selected for his ''extraordinary skills in communication, organization, and leadership during a major disaster and a major Amateur Radio public service event.''

During the Midwest floods of 1993, Adam, then age 13, was in charge of scheduling ham radio operators for round-the-clock emergency communication. He also acted as net control station for the disaster communications in his area, according to Pasternak.

The following year, at age 14, Adam was a key organizer of amateur communication for the US Olympic Festival, held in St. Louis, Pasternak said.

Currently, Adam is the network manager of his local Amateur Radio Emergency Service (ARES) net and a net control and weather spotter for the National Weather Service's ''Skywarn'' network. He also edits a regional ''Skywarn Newsletter.''

Adam lives with his parents, Gil (KA9YAW) and Teresa Weyhaupt, and two younger sisters, Ann and Ellen. He has been a licensed amateur since 1991 and holds a Technician class license.

Adam will receive his award on August 19, at the Huntsville Hamfest in Huntsville, Alabama. Also taking part will be the 1994 Young Ham of the Year, 16-year-old Allison Zettwoch, KD4CKP.

Two additional finalists for the ''Young Ham of the Year'' award were 18-year-old Bryce Duncan, N0YDI, of Red Wing, Minnesota, and Toby Metz, KB7UIM, a 14-year-old from Meridian, Idaho.

OK all you headspinners out there, this is my last piece of ham equipment and I'm looking to get rid of it. As most of you know, I'm selling all my equipment to help fund flying lessons. This being an expensive undertaking, I'm selling almost all my ham gear. Anyway here are the details...

Alinco DR-130T 50 watt mobile. about 6 months old, in excellent electrical and physical condition. This is a 50 watt 2 meter mobile and has a DTMF microphone. Nice for packet or mobile work. Really large display and great audio (unlike my old Yeasu). Anyway, I'm looking to get $200 for it. This includes shipping and all manuals, boxes, ect. If interested E-mail me at: WCOYLE@DCCC.EDU.

Tnx & 73
Bill
N3OGH

Ps, if you would like to gripe about the fact that you feal this message is in the wrong forum, don't bother. I don't have access to any other forum and enough people seem interested in buying my gear instead of launching some self rightous crusade to be the net police.

I desire to use a mobile antenna on a sailboat and on a fifth wheel, therefore this antenna must be easily moveable. I have the obvious choices of the Ham stick, Hustler and Outbacker antennas.

I desire any comments on these choices and any other suggestions a ham may have. I would like to know about their general ease of mounting, general performance, noise, ease of band change, broadband performance and any other comments users may have in regards to these antennas. Thank you for your time.
Dan, N6FPE, Rancho Cucamonga.

easy...did people pass answers back and forth? did they collaborate on what
the right answers are? did they walk up and look at the answer keys or the
computer screen? did someone tape record the test and replay it for checking
or have a competant friend in the room actually doing the copy for them?
has the test been compromised and the candidate have a crib sheet of probable
right answers...

and i'm not even trying hard...

did the guys bring a morse reader to decode the morse into a display or stored
in a computer for later perusal?...there's probably millions of ways to "cheat"
if there's no check on the system by observers.

Easy to fix, through it away and get Morse Academy. It works with
your sound card which means you can make your own practice tapes for
the road. Morse.exe was good also, came with 'c' source, if you like
to tinker.

sure...you musta lived at an FCC exam point -- 4 big exams per year at many of those points. i was another lucky one myself (indianapolis). for others it was more of a problem (getting serious now..)

from here you had to go to Tampa or Miami or if you were lucky, the FCC folks would come to a hamfest from time to time and run a test session for those lucky enough to sign up. big room full of people with a bad PA for morse tests. generally only a so-so setting not really conducive to taking an exam.

and those exams were mid-week in the morning so you'd usually have to lose a day of work somewhere and probably have a hotel bill as well.

now we can offer an exam at least every month (there are 3-4 every month within a hour's driving distance of here....).

it's actually good the FCC is able to handle volunteers..it's quite possible there would have been no amateur radio examining if that had not occured.

I've got a basic paket tnc 2chips several other components that seem to work until u connect w/someone then all goes dead. no recieve no transmission accepted by others that is recognized. It'll work for very little then it quits any similar experiences? Circuit is 2"x 3 1/2". TM3105 & 7400hc series ic. Please email me direct.if you can. Thanks

820. Re: D104 microphone Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: fitr%mimi@magic.itg.ti.com
Message-ID: <3u28tn$mt0@tilde.csc.ti.com>
Source record: 242571

Be warned that there are several "knock-off" D-104 microphones that have been manufactured over the past 10 or 15 years. They look identical to the ever-popular D-104 "silver eagle" microphone. I've seen them in Korea, Hong Kong, Japan, and Singapore. Here's what to watch for:

1. Make sure there is a small black / foil sticker at the top of the 'D-104 head'. This is at the very top as you look down on the mic. It should have the familiar Astatic symbol with lightning bolts coming from either side of the "A".

2. Astatic prints their name on the preamp circuit board. You must remove the entire felt-covered bottom plate to see the name, however.

3. The TUG and TUP stands are also embossed with an Astatic logo on the inside where the slim tube of metal attaches to the chrome, black, or grey base (depends on model). Also, the under-side (bottom) of the base will be a vinyl-clad scratch-cover instead of the Astatic green or black felt (like a billiards table).

The workmanship is pretty good on the fakes, but, the chrome finish will flake . Electronically, the pre-amplifiers are different and the xtal microphone heads differ in freq response and sound quality.

If it's "new in box", the Astatic corporation always seals the boxes with "tamper resistant" box sealing with red lettering to ensure the box was unopened before final customer delivery.

>>Brad WB8YGG
>

I imagine the reason for not using steel is rust. Since RF travels on the outside of wire (called skin effect), the oxidation and rust would perhaps cause increased resistance and therefore less radiation. (just my guess) Of course, copper tarnishes so maybe my theory is bogus? I'm sure someone reading this will correct me (politely, please).

I DO know that copper-weld is a very popular choice of antenna wire. It combines the strength of steel (inner core) with an outer copper coating (better conductivity). Solid copper is fine, but, a large/heavy antenna will sometimes stretch the copper (make the antenna longer) and change the resonant point of the antenna.

I've used aluminum grounding wire and it worked ok except that I had to connect the coax to the antenna elements with aligator-clips and hose clamps since I couldnt solder to aluminum...perhaps this is also why steel is not used...difficult to solder to.

>cases.

This is contradictory. The US is one of the biggest world markets for ham equipment, even if it is only one "country." If US hams wanted 220 gear, the "market driven" aspect would give it to them. The real reason 220 is not widely used is that there are very few repeaters there, except in areas where the other bands are very crowded. And why are there very few repeaters on 220? Because most repeaters are built from converted commercial equipment, originally intended for the 150 and 450 MHz bands. It is easy to retune this equipment into the nearby 2m and 440 MHz bands. But commercial equipment for 220 is very rare, as there is no commercial band there. So 220 repeaters need to be "purpose built" for ham use. This makes them much more expensive as radios, antennas, duplexers, etc. must be bought new rather than used, and also requires more technical competence to set up. So would-be repeater operators go to the 2m and 440 bands instead, and potential users follow along. The manufacturers then follow the users by building equipment for the bands they want to use. There is no implicit dictate from Japan that we will not use 220 (there apparently *is* one about 900 MHz, but that's a different thread). Eventually, as 220 gets more use, simply due to overcrowding of the other bands or whatever, the manufacturers will make the equipment necessary, after there are enough buyers.

>I know in SO CA where 220 is popular (in contrast to many other
>regions) where the availibility of 220 repeaters still makes the purchases
>of 220 equipment but this is not the case in all areas.
>
>The neato bells and whistles of equipment from the factory have
>replaced the home brew stuff. Those that are still into making homebrew
>stuff are in the minority and as time goes on will lose their influence
>in the hobby.

The influence on the hobby, at least in this area, has been from domestic regulations, in particular of the commercial bands, making large quantities of surplus 150 and 450 MHz gear available to the early VHF/UHF FM experimenters, who necessarily were homebrewers to some degree, but also knew enough not to re-invent the wheel. Loosing part of 220 to commercial use may be a blessing in disguise.

To all radio amateurs

SB DX ARL ARLD038
ARLD038 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. A station signing 3W5FM on 14195 kHz at about 1330z was active over the past week or so.

BHUTAN, A5. A51OS was on 14247 kHz on July 3 working WA4JTK and VP2VF. There has been no activity from A51OS since.

WESTERN SAHARA, S0. Tim, KC0PA, is still active as 4U/KC0PA. He was on 30 meter CW earlier this week. Though his CW is very slow, he gives out the Q's. He was also heard on 18137 kHz SSB at 1325z. Check out time from S0 will be August 1.

BENIN, TY. Ken, WA4OBO, plans to stay in Benin several times over the next two years and become active as TY8OBO. Word has it that he has applied for a license to operate from Ethiopia, an operation planned for August or September. Ken operates mostly on HF SSB. QSL via his home call.

NAMIBIA, V5. Charlie, KY0A, plans to sign either V52/ZS6YG or V52YG from August 7 to 10. He will operate CW only on 160, 80, 40 and 30 meters, with a chance for some 17 or 12 meter work. QSL via KY0A.

DENMARK, BORNHOLM ISLAND. Peter, DF6QN, will be active from IOTA EU-030 July 29 through August 11. Check around 7060, 14260 and 21260 kHz.

CORRECTION TO W1AW DX BULLETIN 35. The penultimate paragraph should have read, ''In membership correspondence to the entire DXAC, 157 persons, or 72 percent, were against adding Scarborough and 61 persons were in support of new country status.''

CANADA. QRP DXPEDITION. Stefan, DL1FDF, will be active as VY1QRP July 24 to October 16. He will travel through Ontario, Manitoba, Saskatchewan, Alberta, British Columbia, Northwest Territories and the Yukon Territory. Check around 0500z on 14060 or 14285 khz. Also try the following QRP frequencies, CW/SSB. 3560/3690 kHz, 7030/7090 kHz and 14060/14285 kHz.

PICTOU ISLAND, NOVA SCOTIA. Members of the West Island Amateur Radio Club of Montreal will be active as XJ1CWI July 27 to August 3, and during the IOTA contest on the 29th and 30th. On CW try 1835, 3510, 7050, 10110, 14040, 18080 and 21040 kHz. SSB will be around 1835, 3795, 7250, 14195, 18120 and 21320 kHz. VHF'ers can try 50.110 and 144.300 MHz. RTTY ops will be on 7090 and 14090 kHz. On RS12 they will operate 21220/29420 kHz TX/RX. They may be on RS-15 and other OSCARS. Pictou Island is a rare IOTA, NA-154, and also counts for the Canadian Islands Award group as NS-05. This small island is in the strait between Nova Scotia and Prince Edward Island. QSL via the West Island Amateur Radio Club Inc, PO Box 884, Pointe Claire/Dorval, Quebec, H9R 4Z6, CANADA.

ANTICOSTI ISLAND. VA2RC, VA2LG, VE2BZL and VE2DFY will be active from NA-077 July 15 to 21 as XJ2CQ. On CW try 3650, 3707, 7007, 14027 kHz. On SSB check 3737, 7057, 14267 and 14270 kHz. QSL via VA2RC, 4434 Astrolabe, Quebec, G2B 2G9., CANADA.

THIS WEEKEND ON THE RADIO. The DARC HF RTTY Contest is from 1400 to 2000z Saturday on 80 and 40 meters, and Sunday from 1000 to 1600z on 20, 15 and 10 meters. We have no other information on this event.

True, but he's not a real teacher, he's a vocational teacher. They seem to have a requirement that their knuckles drag the ground. After all, they flunked out of the real world and had to fall back on teaching instead of doing. Give him some slack, after all, a vo-ed teacher is two steps above a cop, and three below a garbage collector. At least he isn't a scum-sucking bottom-feeding lawyer. (OJ's going to get off because he looks like a saint compared to the lawyers on the case.)

828. How to _remove_ a ground rod?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: bartbc@orionsys.com
Message-ID: <7917-326639601@orionsys.com>
Source record: 242579

Try an old fashioned bumper jack to jack it out of the ground. Put a clamp around the top of the rod. Then use a small guage chain to attach to the lip of the jack. Ratchet up the jack and the ground rod will come up with it as straight as can be. 73, Bart N7NJL

>Zero Beating -- matching your transmit freq to that of the person you're
>communicating with. This is easy with voice -- adjust RX freq until the
>voice sounds right and transmit on same. To do this on CW, you need to know
>what the tone should sound like (not too high or low).

Netting and zero beating mean the same thing in this context. Basically,
just put the transmitter in spot position, turn off the BFO on the
receiver, and adjust the transmitter frequency until the spot signal
and the desired signal hetrodyne to zero Hertz. Now your transmitted
signal will be on exactly the same frequency as that of the station
you are monitoring.

Of course if you are using a transceiver instead of separate receiver
and transmitter, this procedure is obsolete. If your transceiver's
offset matches the center of the narrow receive filter's passband,
just tune for best reception and you'll be netted close enough. If
you don't have a narrow filter, or if your transceiver's offset doesn't
match the filter passband center, then you need a tone oscillator with
the correct offset. Turn it on, and match the pitch of the received
signal to that of the offset tone oscillator by ear and you'll be
close. Consult your owner's manual for specific techniques to be used
with your particular transceiver.

831. Code Saves the Day!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: jerryk@best.com
Message-ID: <3u4hm9$dtb@shell1.best.com>
Source record: 242582

Keywords:
Hi,

A cute thing happened to me a few months ago. I was working on a project with an embedded processor. This computer had almost no I/O (Input/Output). It spoke with another processor through a bank of shared memory. That other processor would print messages on the screen that my processor passed to it.

Well, that's how it was supposed to work. When I first tried out my program, my CPU sat there like a lump, drawing its 1/2 amp and heating the surrounding air. I had no idea why, or what it was up to. With my $40,000 In-Circuit Emulator the thing worked fine, thank you :-(. So I couldn't use the ICE to troubleshoot the problem. What to do? No ICE support, no serial ports, no LED's, can't even do a printf.....

Suddenly a light came on in my head. I did have one bit of I/O available! I slapped together a quickie morse code output routine, hooked it to printf() at one end, and to this one available port bit at the other end. It was really stupid, something like:

```
switch( ch )
{
case A:
dit();dah();
break;
case B:
dah();dit();dit();dit();
break;
... etc ...
}
```

Then I peppered my code with diagnostic printf()s, hooked a speaker up to the port bit through a resistor - didn't want to fry the port! - and started listening to my prototype and copying down its output. Coworkers looked up - "what's Kaidor up to now?". And about two hours later, my bug was Found and Fixed.

Now, I could have done a bit-banging UART with that port bit, but it would have been harder. Uarts require precise timing to work at all. Terminals have to be wired up correctly. Control pins have to be satisfied... No, it was much easier to get the morse code routine up and running. And I resisted the temptation to make it "chirp" :-).

- Jerry Kaidor, KF6VB

How quickly we forget that bottom 2mhz of "our 220 band". BTW, did anyone else notice the cover of 73 magazine a few months back had a new 220 mobile tuned to 220.10. I wonder if the commercial users are still using this as a calling frequency :-)

Just wait, there will be surplus eventually- look in last years Decibel products catalog- pages of new combiners, antennas, duplexers (actually- now for those that want a good DB open-dipole antenna can get it for under $600 where before it was a "special build" and cost over $1000).

> re-invent the wheel. Loosing part of 220 to commercial use may be a blessing
> in disguise.
>
> -Mike KD4QDM

I think you may be right Mike. Just means more used stuff in 5-10 years that is easily converted, plus we lost the nasty part of the band- the part adjacent to TV channel 13- although since when did potential TVI stop any of us!

834. Vanity Call Signs - My Story

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-13 00:00:00 UTC
From: jimwills@ballistic.com
Message-ID: <3u4rmf$24r@giga.bga.com>
Source record: 242585

Having been a telegrapher in the USN from 1950 to 1954, I showed no interest in Amateur Radio unitl about 1961. At that time I obtained a license as WA5EHQ. I stayed in this limbo status after "incentive licensing" until about 1985 when I upgraded to Extra in order to build a testing team in our remote area of the Texas Hill Country. I didn't like the call I was assigned and having known that the FCC previously issued call signs of choice to Extra class operators, I began what turned out to be a very long discouraging journey trying to obtain another call sign from the unissued ones laying dormant in the FCC database. After many letters to the FCC and many denials I reasoned that this was ridiculas. So each year I would submit a peition to allow the reissue of unused call signs. Each year the FCC either ignored and did not respond or denied my request. Finally after corresponding with 2 presidents, and 2 senators to no avail. I reasoned that if I could get the attention of the people who control the budget of the FCC, maybe, just maybe I could get some results. I orginally suggested a $30 one time fee. Enter Ralph Hall D-TEX who sits on the Telecommunications Sub-committee that controls the FCC budget. He had a receptive ear. This last effort began in 1990. One of my former businesses was a 2-way radio shop. It cost me $35 (I think) to change a license in the commercial radio arena, so I reasoned that the FCC should be reimbursed the same $35 for their administrative trouble. My petitions were returned to me denied. The Telecommunnications Sub-committee in structuring the FCC budget in 1993 added one line: Vanity Call Signs $7. The President signed the budget bill August 10, 1993. To date not one call sign change has taken place yet. The staffers on the sub-committee misread my request for a one time fee of $35. They mistakenly thought that Ham licenses were good for 5 years, so they divided $35 by 5 and got $7/yr: Hence $70 for a 10 year license. I am currently trying to get the "Corrections Committee" of the Congress to straighten the mess out and make the fee a one time fee. Who knows what is going to be the final result. THE BIG QUESTION IS WHEN WILL THE FCC GET THIS BALL ROLLING? Jim Wills, N5HCT jimwills@ballistic.com

How interesting...the rules you cite are nearly identical to those here in Glendale. They must all be modelled after some big city somewhere.

I can tell you from experience that if you buy there, you will have lots of hassles if you try to put up a tower. Assuming that your city behaves anything like mine.

I did receive a permit for a vertical antenna. However, it is just **barely** legal, and I live in fear that the city will challenge it someday. I had to threaten litigation to get the permit. Turns out they knew that their regulations probably wouldn't stand up under PRB-1. (But even that is far from certain. The 9th Circuit is one of the most hostile ones re: PRB-1, alas.)

Make sure that your place doesn't have any CC&Rs or deed restrictions. Those are even tougher to fight than ordinances. PRB-1 doesn't apply at all.

Rots of ruck.

You have to write the address as follows:

Lauro Zanoli
Via Degli Esposti 9
40108 S.Cesario S.P.
(MO) Italy

(Via Degli Esposti is the name of the street)
(S.Cesario S.P. is the town and (MO) stay for Modena, the main town of
the district where is located S.Cesario S.P.)

I heard a dandy the other night on one of my favorite repeaters.

Nobody showed up to run the FM on on the repeater so one of the new guys boldly stepped up to the challenge (I was not around to hear this as I tuned in later).

Anyways, during the net he must have gathered up his courage, I guess it seemed like time to take a commercial break, so he launches into this advertisement for the local ham dealer's upcoming Kenwood Days. I wish I had a tape recorder going because it was a classic, including a line to "stop in and check out the great deals."

Gotta hand it to him, he ran a FINE net BTW.

I passed my no -code Tech on July 1st, found the callsign via the Internet on July 7th and received my license via US Post Office today, July 14th. Things are moving a lot faster than they used to. Now if I could figure out how to master Morse Code in such a brief period of time I'd have it made <grin>

854. Weather Fax

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-14 00:00:00 UTC
From: markus@oahu.cern.ch
Message-ID: <DBq4B8.DHE@news.cern.ch>
Source record: 242408

I'm trying to receive weather fax emissions and struggling to get
it right.
My setup is a shortwave receiver (Panasonic RF-B45) and a PC with
a soundblaster card. A program (wxman) promises to be able to use
the soundcard to decode the audio into pictures.
So far, so good. After lots of searching and a visit at the international
weather organisation (living in Geneva helps), I've found an extensive
list of frequencies and schedules. Out of these I choose Hamburg meteo
on 7880kHz. The signal is clearly audible. Here my problem starts:
Switching to ssb and adjusting the fine tuning button changes the
signal from nice and strong to nothing. What I don't know, is what
the 'good' adjustment is, and how to find it.

Do you have some hints ?

Markus

>
>Sorry, copyright is not a non-disclosure agreement. Especially for
>*unsolicited* mail, US law says you are free to do with it as you
>wish. Solicited mail may or may not have an implied contract status,
>but that doesn't hold for unsolicited mail. By using the mail in that
>way, you are deemed to have waived any copyright protections you may
>have had.

No. You own the *copy* of the work that is sent to you. Indeed, there is no non-disclosure, so you may reveal the content to someone else, But the creator of the work retains full copyright of the work, thus you cannot republish the work (and posting it to USENET and displaying it on Times Square are publishing it) without permission. The relevant case law on this concerns a biography of a reclusive author -- I think it was B. Traven, author of "Treasure of the Sierra Madre", but it might have been J.D. Salinger. The writer of the biography had obtained letters written by Traven from the people Traven had sent them to. Traven refused permission to republish the letters. The court case found that the traditional "fair use" exception for quotations only applied to *published* works, so the biography writer had no right to publish quotations from the letters. However, it was undisputed that the recipients of the letters owned those particular copies of the work and could dispose of them as they wished. It was also undisputed that copyright covers only the expression of the ideas, not the ideas themselves, so the biography writer could (and did) publish the biography by replacing all direct quotations by indirect, paraphrased ones. Thus, in US law, if I send you some email, you may not repost it to USENET without my permission. You may report a paraphrase -- "Rich told me in private email that he thinks I'm an idiot".

Am I the only one (I somehow think not)?

Despite the context of the original post, I actually tried to be helpful to Mary John(son) when s/he asked about her radio (raido in her case) and radio finger-printing. I emailed her some helpful suggestions and never once SHOUTED.

Now she is sending me very abusive email; I can only imagine what she must be sending to those who took a tough line to her here or in email!

So, I am forwarding her email to:

postmaster@pipeline.com

and putting her in my kill file.

Sigh. Trying to be a nice net.elmer,

My suggestion would be to change the satellites during the summer
months (short skip) and particularly during the hopefully
fortcoming sun spot maximum to a 70 cm downlink.

When 10 meter is open they are certainly usefull in keeping
the band active.

As to the repeaters, they really ought to be switched off during openings.

From: Draagon@guild.bc.ca
Message-ID: <3u6qvh$5t@dns.cyberlink.bc.ca>
Source record: 242415

Hi all,

What are the costs involved in getting a license within Canada? Also as I live in an apartment, is it possible to do from an apartment? I have seen some of the antenna rigs and somehow doubt it is.

Is there any amateur clubs within the Victoria, Canada area? If so do any of their members or do they have an email address that someone could mail to me?

Any other information anyone can provide to me would be greatly appreciated. Please don't use any amateur terms or technical jargon as will have no idea what you will be talking about, as I am very interested in amateur radio but have never gotten any further than listening via my 'cheapo' shortwave radio.

Thanks,

John.

862. VE Schedule for Utah (SLC)?

SB PROP @ ARL $ARLP030
ARLP030 Propagation de KT7H

ZCZC AP98
QST de W1AW
Propagation Forecast Bulletin 30 ARLP030
From Tad Cook, KT7H
Seattle, WA July 14, 1995
To all radio amateurs

SB PROP ARL ARLP030
ARLP030 Propagation de KT7H

Average solar flux was unchanged from last week. We just experienced a very low rise in the flux that peaked just above 80 and are now on the downside of that small peak and dropping into the seventies.

Solar flux has been very low, but at the same time we have been blessed with very little geomagnetic activity. On July 10 both the K and A index were zero over the whole day. Since the first of the month the A index has been in the low single digits, and for the past few days the K index has almost always been zero or one. This means stable conditions with low absorption. Watch for a change around July 22 through 25 when a recurring coronal hole pushes geomagnetic conditions back to the active level.

Sunspot Numbers for July 6 through July 12 were 52, 51, 32, 42, 33, 29 and 36, with a mean of 39.3. 10.7 cm flux was 80.9, 80.6, 81.5, 80.2, 77.3, 76.1 and 74.3, with a mean of 78.7.

The path projection for this week is from San Francisco, California to Vietnam.

80 meters should be open briefly around 1200 to 1230z and 40 meters from 1130 to 1330. Check 30 meters from 1030 to 1430, and 20 meters from 0800 to 1730. The best period on 20 meters should be from 1330 to 1530. 17 meters should be good from 2300 to 0800, with the best time centered around 0530. 15 meters does not look promising, but check around 0530. 12 and 10 meters have an even slimmer chance of yielding a path, but check around 0530 to 0600 for a possible opening.

Not surprising. I see comments in other newsgroup like "When I see one
of those I send a dozen replies that include the message, plus one to
the postmaster." and "I cue my mail robot to send a couple of dozen
replies.", I can only guess how many replies these persons actually get.

Recently had opportunity to observe time lag from "grant" to "issue" of
license from Gettysburg. My wife passed No-Code Tech in April. License
granted 4/24/95; received in mail 4/28/95. I passed Extra in June. License
granted 6/19/95; received in mail 6/24/95. I live in Shrewsbury, PA -- 30
miles from Gettysburg. Based upon conversations with others in local area
it appears FCC issues/prints licenses within 2-3 days from grant.

Also, check http://www.fcc.gov/pub/XFS_AlphaTest/amateur for daily files
of license grants (MON.ZIP, TUE.ZIP, etc.) They're available the evening
of the grant or sooner. Unzip and look for appl.dat. Search for your name
& you'll find your callsign. Interestingly, their data base stores all the
significant info in this file EXCEPT license class -- that's in indiv.dat.

Not to mention the fact that the above example is of someone publishing letters
that he was neither the originator nor the recipient of. I am free to do anything
I wish with a letter to which I am either the writer or the intended receiver.

And Email is even more wide open as there is little if any way to guaranteee
where it goes or who sees it.

Is there anyone know about the device (Subscriber Network Interface)?

This device is used at the telephone subscriber end in the United States
for automatic phone line testing. I would appreciate it very much if
someone could tell about how this device works and why the line voltage
will drop to about half of that on the central line. I learn that this
device is eventually to be installed in the whole United States in the
next few years. If this is true, lots of communication accessories must
be modified to accommondate this change.

Please let me know if you know something about this device.

875. This Week in Amateur Radio #120

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-14 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Z7AgoGx.sanderman@delphi.com>
Source record: 242429

Here is a summary of news items covered on edition #120 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 21-Jul:

-

1. Atlantis Lands, Discovery Launches for Next SAREX Mission
2. ARRL President Resigns for Health Reasons, KB6ZV New President
3. FCC Reduces Forfeitures Against Four New Orleans Amateurs
4. Major Corporation Poses New Threat to Amateur Spectrum
5. Upcoming Special Event Stations with George Bowen, N2LQS
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "The RAIN Dial-up" from Chicago
8. "Amateur Radio Newsline" - Edition #935 from Los Angeles
9. Weekly Propagation Forecast
10. Your Voice Needed for "This Week in Amateur Radio" ID Breaks
11. Join Us on Internet Relay Chat after the Saturday Uplink

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Transmission and production costs were provided by the Marquette Repeater Association of Marquette, Michigan. Funding to access "The RAIN Dial-up" was provided by a grant from the Eastern New York Chapter 95 of the Quarter Century Wireless Association.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

That's a great theory, but I can imagine your liability for providing legal advice when I receive another unsolicited book, magazine or recorded medium document in the mail and proceed to copy and publish same. When the offended party comes to knock on my door, I'll tell them that my legal counselor, Gary C., told me it was acceptable to invoke the protection of attorney directed behavior... Betcha that'll get me far!

> >normally check for this sort of encumberance, but if they find out,
> they
>
> >will revoke the license.)

Everybody thinks they're an attorney these days and, obviously, I've found another. I'd advise you to pass the bar before you toss out such witty information which is grossly inaccurate and misleading...

The FCC does not posess the authority or power to restrict access to a license of any radio communications device, spectrum or frequency based upon past criminal convictions. Their power is derived from Congress, who has never obligated them to require this information, nor enforce restrictions pursuant to this subject. They have no authority to, subsequently, remove your license because of a conviction of any form.

Further, I found the following statement most amusing, so am repeating it below:

> >inelegible to vote, hold office, own firearms, etc, unless his rights
> have

Wrong, wrong, true. Two out of three isn't bad - but it would have helped if the two were correct. I'll even be kind enough to explain the facts:

Simple matter of law: If you take away ANY person's ability to vote, you take away their right to representation. The courts have always been favorable in their opinion that felons - incarcerated or not - are entitled

to representation. Without representation, a felon can not be required to pay taxes, ie, taxation without representation - one of the more important principles in US Consititutional law...

For my second point, let's make it easy... Marion Barry, Mayor, Washington, D.C..... Who jumped up and said, "But he's a convicted felon!" There are CERTAIN offices which are not available to a convicted felon, because of congressional action. It is not factual to say that an ex-felon is denied the opportunity to hold office.

It is frustrating in today's society to note the frequency of which individuals with little or no instruction in the highly specialized field of US law are providing pseudo-counsel to those who don't know better than to find a REAL attorney to answer their questions...

>Yeah! Them pesky no-code extras, advanced, and general class
>ops...Boy! *<8oD

Since in past months most of the fines levied for rules violations
have been made for violations that occurred on the HF bands, its a
safe assumption as the posting didn't indicate the nature of
the violations that they were also for HF violations, where no no-code
operator would legally be anyway.

This, coupled with the lack of enforcement on VHF, and
enforcement called "abysmal" by the ARRL recently in a letter
to the FCC, proves nothing. I'd be happy to supply a list of
a dozen violations and callsigns by the end of the week after
listening to one 2 meter repeater around here, if you'd like.

On another note, I haven't noticed anyone else criticizing the FCC
for another trend in these fines. Anyone notice the consistent word
"reduced". What a better way to send a message to people who
might otherwise break the law -- if we fine you, don't worry, you
just have to complain and we'll reduce the fine. What a great
deterrent.

MD

Nope. If you write and send it, you own the copyright on the contents, but

not the physical letter itself. If you receive it, you do not own the
copyright on the contents, but you do own the letter.

Rather than speculate, go look at the copyright FAQ (appears occasionally
in news.answers). If you have web access, look at

gopher://marvel.loc.gov/11/copyright
http://www.eff.org/pub/CAF/law/ip-primer
and

You might not want to hear this but passing a fill-in-the-blank code
test, to me, is really not passing the code test. Anyone who gets a
license in this manner is still a no-coder, _in_my_opinion_. Those new
callsigns above may indicate their owners received their license
in this manner.

881. Schenectady, NY SAREX Contact 7/17/95

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-14 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RZOhg85.sanderman@delphi.com>
Source record: 242435

FOR IMMEDIATE RELEASE

Seven students from the fourth, fifth, and sixth grade of Schenectady's Pinewood Elementary School will have the opportunity to talk directly to astronauts aboard the space shuttle Discovery. The Schenectady Museum Amateur Radio Association will host SAREX, the Shuttle Amateur Radio EXperiment on Monday. The students won the opportunity to ask questions of the shuttle crew in an essay contest sponsored by the school and the Schenectady Museum & Planetarium. The SAREX payload is flying aboard the STS-70 mission launched Thursday from the Kennedy Space Center in Florida.

The Schenectady Museum Amateur Radio Association has worked for several years to bring this educational program to the Capital District. SMARA Chairman Peter Harvey noted that only selected clubs and educational facilities receive this opportunity. "For this flight, the Museum is one of only eight groups to be offered the chance to bring amateur radio and the space program into the science classroom curriculum." Six of the other participating schools are in the United States and the other in Argentina.

The Shuttle Amateur Radio Experiment is sponsored by the American Radio Relay League, the national fraternal organization of "ham" radio operators of Newington, Connecticut, AMSAT - the Radio Amateur Satellite Corporation, and the National Aeronautics and Space Administration, and supported by the Federal Communications Commission. NASA's intent in making astronauts available for SAREX operations is to involve the largest possible number of people, particularly youngsters, in technology and the US Space Program with the help of amateur radio. SAREX also allows astronauts to converse with their families and other hams around the world during their non-working hours in space.

Many of the astronauts in both the US and Russian space programs are avid ham radio operators. Dr. Norman Thagard, who returned from the Russian MIR space station last week, kept in close contact with students here in the US via amateur radio. This same ham equipment helped facilitate communications for the historic docking of MIR and the shuttle Atlantis late last month.

Amateur radio has been flying aboard shuttle missions since 1983 when Dr. Owen Garriott was the first to talk to earthbound amateurs. Slow scan amateur TV (ATV), computer packet messaging systems, and conventional FM voice communications have all been successfully used by astronaut-hams to enlighten school children.

The seven Pinewood students, two boys and five girls, will
ask their questions on a special ham radio station at the Museum.
Licensed members of the STS-70 crew include Mission Specialists
Donald Thomas, KC5FVF, and Nancy Jane Sherlock-Curie, KC5OZX.
Additional members of the Discovery crew, Commander Tom Henricks,
Pilot Kevin Kregel, and Mission Specialist Mary Ellen Weber may
also be available to answer student questions during the planned 17
minute contact, currently scheduled for Monday at 10:10 AM EDT.

: I'd like to find out the price of this rig. Sounds like it may be a
: nice radio.

I've heard street prices ranging from $1,100-1,300; guess it will depend on the exchange rate at the time of release.

My concern is performance across such a broad frequency range; 1.8-148 MHz. I've heard comments that the IC-736, which adds 6m to HF, performs poorly as a receiver on 80 and 160. But, even if the only good part if 6m/2m, the price is a lot less than an all-mode rig for VHF.

Jerry: Good engineering there. (snipped).

A few weeks ago I came in to the office, and heard b's in CW.

I wandered around the office, tracking the sound. I found it was the UPS for our Novell server. I checked the status screen on the console, and it said the battery was bad, please replace.

I bet a ham designed the thing, and made the audible warning not only alert, but inform as well.

sefranek@iii2.iii.net (Thomas C Sefranek) writes:

> I really miss having to drive 80+ miles to the nearest semi-annual
>exam given by the FCC.

Having to make the drive and only having available periodic exam sessions
removed the frivolity from the process. One had to study the material
in a serious manner, for it might be a long time before you were able
to retake a failed test. A serious approach translates to long-term
knowledge gain.

>I really miss having only 1 chance to suceed, they
>don't give wimps a second try.

Second try? How about a 10th try, or keep trying until you finally
pass? If someone needs a second or 10th try it sounds as if they
really weren't prepared in the first place. I can imagine what
happens today is that after failing each try the person runs
out and skims through his study guide. Cramming only makes
for short term retention.

I hope the FAA examiners don't allow second tries immediately
after a private pilot examinee fails the flight exam. Scary!

>I really miss being told to re-register to
>take a code test next time, when i only signed up for the Advanced written.

Nothing wrong with that. Your code speed was supposed to at least
remain at the tested speed for the duration of your license.

>I really miss the examiners not know anything about Ham radio, just
>there to grade exams.

Did you know the backround of those examiners? Do you think they
knew nothing about electronics? Those guys were also testing
radio and TV broadcast engineers, shipboard radio officers, and
anyone else requiring a government radio license. Ham radio was
trivial to them. Their code speeds were better than 20wpm, for
back then they had to check your sending for both correct speed
and quality.

>Sorry, I'm real active now as an INVOLVED CONTRIBUTING examiner,
>willing to HELP the new hams not complain about how "good" it was..

But it's good to let the new hams know that we used to maintain high
standards in testing.

Back in the bad old days, when everything was totally I/O bound, it was a fairly standard trick to program in a morse loop, and then listen to the RF comming out of the computer on an AM radio placed near the CPU. The RF hash would be modulated in morse. I even heard one such setup that could play simple tunes through the radio.

BByers@koptpc2cdelcoelect.com posted a message with the above
subject header (minus the "re:") but left no message.

This is the sort of information that you used to find in ham
magazines. A little bit of filler that would tell you whast
kind of spray paint would match the original paint used in
commercial equipment. The references I saw were usually
for paint to touch up a car.

I have no idea where to look for a comment on a match for
Heathkit green. I know nothing of cars, so I don't even
know if you could get the paint if you could find a reference.
I'm thinking like back in the sixties, and into the seventies
a bit. 73 was really good about such things. Now they seem
to like the articles to look real pro and want them to fit
an exact size.

The Hints & Kinks column in QST is also the sort of place
that would have provided such information. Since they
do end up in collections, if you were lucky and found someone
or a club that has the old editions of the books of the same
name, you might find some information this way.

Not really helpful, I guess, but the information is out there
somewhere.

SB DX @ ALLBBS $OPDX.215
Ohio/Penn DX Bulletin No. 215

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 215
BID: $OPDX.215
July 17, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA4DAN, KE9A, DF4RD, DL9ABF, G0BZF and DL9GOA & DX News Letter for the following DX information.

5A, LIBYA. Toly, UT3UY, and friends are now active as 5A1A. As this bulletin was being written, most of the reports indicate that they have been active mainly on 20 meters SSB. Check around 14202 kHz between 2230 and 0230z. There were also reports on 21020 kHz at 1715z and 28015 kHz at 2035z.

CY9, ST. PAUL ISLAND. Just a reminder! Operators Ron/AA4VK, Murry/WA4DAN, Bob/KW2P, Bill/K4TVE and Vance/W5IJU will be active from July 27th until August 2nd. Everthing is a GO for this operation. The boat charter, travel arrangements and the Canadian Coast Guard landing permission have been all acquired. Operators will sign homecall/CY9. Operations will be on CW/SSB/RTTY, 160-6 meters and the satellites. By the way, this will be the first joint operation by the DXpedition team since their highly successful KP1 and KP5 DXpeditions. The major sponsors of this CY9 operation includes: Cushcraft Corporation, Dunestar System and The Radio Works Company. The team is still in need of donations to help offset the high cost of shipping for their DXpedition equipment. QSLs and donations for the CY9 operation should be sent via WA4DAN, Murry Adams, 403 East 14th Street, Greenville, NC 27858. Suggested frequencies:
CW - 1830, 3505, 7005, 10105, 14020, 18075, 21020, 24900, 28020
SSB - 3790, 7090, 14195, 18120, 21295, 24940, 28395, 50120
RTTY - 7085, 14080, 21080, 28080

JW, SVALBARD. Begin looking for Dominik, DL5EBE, who will sign JW0K as a member of a scientific expedition to Svalbard from July 18 until August 10th. He plans to be active on the bands during his spare time.

LY95, LITHUANIA. A special event station signing LY95BDX (Baltic DX Group) will be active from Palanga in the north west part of Lithuania,

from July 22-31st. Activity will be on CW/SSB/RTTY/AMTOR/satellites, using 160-2 meters. Suggested frequencies: 1815, 1855, 1927, 3555, 3720, 7025, 7055, 14055, 14295, 21055, 21295, 28055, 28555, 50130, 144.055 and 144.355. A special QSL cards will be issued. (No QSL route was available at this time.)

OD, LEBANON. OK1EE/OD5 has been active on the bands mainly on CW. He has been heard on 14010 and 7003 kHz between 0200 and 0300z. He will be there until August 12. QSL via OK1FMR.

TJ, CAMEROON. Jim, TJ1JB, can be found usually around 14030 kHz bewteen 1900 and 2000z. It was reported this week by Ken, KE9A, (his QSL Manager) that Jim will be taking his station down in the next couple of weeks and returning to the U.S. He also mentioned that the cards had been ordered, but that Jim probably wouldn't answer them until he returns stateside. Since it will most likely be fall before his household effects are received in Virginia, Ken has asked Jim to send him all logs, cards, etc and he will see what he can do to speed up the process. Ken mentions that he is acting as a mail drop for Jim and not actually answering the cards. Jim prefers to do the QSLing himself. Please be patient.

YO, ROMANIA. Oli, DL9ABF, will activate special event station DL9ABF/YO/P from the Castell Dracula in Transsilvania, July 29-30th. Activity will be CW/SSB on 80-10 meters, possibly 160 meters.

OPDX GOES ON VACATION. The OPDX Bulletin will not be published for about three weeks. There will be no publications for July 22 and July 29th. I will be visiting Los Vegas, NV and Mariposa, CA, for a short time, but spending most of my time in Simi Valley, CA. Please keep sending your DX information. --- Thanks for all your input de Tedd KB8NW

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

893. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.X8F08c1w165w@GRAFex.sbay.org>
Source record: 242447
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

The IF-232C does come with a schematic, but the QST/Handbook interface
would be simpler to build. One important point about both the Kenwood and
QST-article interfaces is that they isolate the radio from the computer.
This prevents spikes from the serial port frying the rig's digital board.
Some other designs (e.g. the J-Com) do not provide isolation.

>73, Moritz DL5UH

Moritz, your comments seem to presuppose that Dx is the be all and
end all of amateur radio. I'd contend that's only true for Dxers.
For many, there is much more to amateur radio than postal card
collecting. Six meters is an interesting band primarily because
of the wide mix of modes, methods, and interests it encompasses,
certainly including Dx for those so inclined of course.

That's not to say that I disagree with your advice. The flexibility
offered by a radio capable of both amplitude and frequency modulation
is a good thing in general, and particularly good when the cost
differential is small, as in this case (though the general high
price of all 6 meter radios seems out of line, a transverter can
be a more cost effective choice for some). The all-mode will allow
use of more advanced digital modulations that can out-perform
either SSB or manual Morse for weak, distorted, or interference
plagued signals (though purpose built radios are better still,
especially for meteor scatter or aurora where digital techniques
can really shine), if that's your interest. And of course, the FM
performance of such radios is often superior as well, and less likely
to cause disturbing TVI for your neighbors than amplitude modulations.

Sorry, copyright is not a non-disclosure agreement. Especially for
unsolicited mail, US law says you are free to do with it as you
wish. Solicited mail may or may not have an implied contract status,
but that doesn't hold for unsolicited mail. By using the mail in that
way, you are deemed to have waived any copyright protections you may
have had.

Well I would advise you to remove the NiCd AA and charge them in
something else. I've used NiCd for my TH-77AT and have had no problems.
Just charge them outside the case.

>I checked the schematic and the TH22AT internal charger uses an
>(emitter follower) constant current source set to about 50 mA.

That may be so, but you may find that it will be difficult to try attaching
the case of the BT-9 to the stock charger supplied with the radio. The
mechanisms are slightly different. Take my advice and charge the AA in
something else.

:
: Yes, but is does it really allow hams to use *scanners*? To be honest,
: I don't know...

The few states (less than 10 states have any such laws)
that have anti-scanner laws (actually the laws just
mention radios capable of receiving police transmissions) all have
broad exemptions for amateurs that essentially do allow a ham to
have any type of radio in the car. The exemptions literaly
"exempt" the ham from all aspects of the particular law.

: >other (city, county, local)
: >jurisdictions also have anti-scanner laws, and some do not offer
: >a waiver for amateurs.

True, but most of those local laws don't seem to come into play with hams.
That doesn't mean that you or I might find ourselves at the wrong end
of the police inquiry, but I think those local laws are rarely enforced
except when "convenient" by the locals.

: From what I've heard what is legal in all amateur exemptions for scanner
: use is the use of extended receive, but in some cases separate scanners
: are not. I have yet to read explicit information on this subject.

What you are referring to is the recent FCC premption order which
states that all such laws can not preclude a ham from having an
amateur transceiver in their automobile. Now one great transceiver
might be the ICOM 2SRA which not only is a ham 2 meter rig, but is
also a full functioning scanner from 30MHz to over 1000MHz.

I hope everyone has had a blast with the big high pressure area over the middle section of the country, in spite of the outrageous temperatures. I have heard rumors of big time record-setting microwave DX contacts from Minnesota to Texas up to and including 5.7 Ghz (possible beyond). The low VHF bands (2, 1.25, 70) of course have been noted to 400-500 miles on simplex FM with occasional bursts from 1200-1400 miles - SSB and other modes, including packet, have fared as well. In spite of the misery of 100+ degrees and dewpoints in the 70-80 degree range, and in spite of the interference to local repeater use, it has been an interesting around-the-clock 3 days.

I agree with you both. Ever wonder why there is not much equipment coming out of Japan for the 220 band? Sure, there is one Azden, and maybe one Kenwood rig, but the fact is that most other COUNTRIES do not allow amateur operation on the 220 Mhz band. This is the case in Japan and hence not much incentive to make/sell 220 gear for the ham market. I agree about losing some of 220. It did 2 things. 1. It gave incentive for commerical mfg's to make/market some 220 gear in the USA. 2. It got hams off our lazy behinds and begin utilizing the spectrum that remains. Of course, it stinks to lose spectrum, but I think of another example. Look at all the used CB's that we converted to 10-meters. Look at the proliferation of 10-meter monoband rigs. These designs were all from the CB market (albiet the foreign market). There rigs were not originally built for amatuer service. Ever hear of a Uniden Ham radio...not me! It's a converted CB! The benefit is that there are many more hams up on 10 meters than in 1986 during the last sunspot bottom. It also gave the newcomer (novice with phone priveleges) a cheap way to get a rig and get active on an under-utilized band.

Just my 75 cents worth..73 and have a great day...Joe BV/N0IAT

From: wa2ise@netcom.com
Message-ID: <wa2iseDBqqyt.1Fv@netcom.com>
Source record: 242338
Cross-posted to: rec.radio.amateur.misc,sci.electronics

With this very hot weather spell in the midwest to northeast USA, the power companies must be working hard. Friday afternoon, my powerline voltage was at 107 volts (should be between 110 to 125 volts).

Just a few minutes ago (around my local 12:30 AM) the powerline did a rather strange glitch. Lights started dimming, guessing a 10 volt drop, in steps lasting 1 second, stepping lower untill the lights seemed to be at 1/2 or dimmer brightness (would guess 60 volts). Then, the lights started to recover brightness, again in small steps each lasting 1 second, until the line got to normal voltage.

The air conditioner got very unhappy with this, I turned it off to avoid a burn-out.

Though my PC didn't even notice this strange voltage behavior, I was logged in when it happened. Looks like those switching supplies are good at tolerating brownouts!

>The question boils down to whether posting on usenet is publishing
>as defined under law, or is it equivalent to a group of loungers
>hanging out on a street corner exchanging tales. I contend it is
>the latter.

That's what most of us would like to believe, but in fact the law is
more likely to side in favor of those whose intellectual property rights
are at stake. Copyright protection isn't limited to "publishing" -
distribution (of copies) is probably a more appropriate term, especially
on the Internet.

>If I pass around a letter I received from someone to a group of people on
>a street corner, I haven't published the letter under the normal meaning
>of publishing. I've merely showed my copy to a group of associates
>(however many), which is allowed. Rules devised for ink on paper don't fit
>well with electronic messaging.

Showing a letter to someone isn't the same thing at all. When someone
posts to a newsgroup, they have created a copy and distributed it to
others. Rather than considering a letter though, why not think of this in
terms of material that we consider to be more formally copyrighted. For
instance, would you post commercial software to a newsgroup and expect to
be immune from prosecution? How about placing a best-selling novel on an
anonymous FTP site for the public to download?

Somehow, I can't help thinking that applying copyright law to the
Internet is not as difficult as it might at first appear.

73,

Jack WB3U

I spoke to a friend of mine at the local FCC monitoring station, and he told me that nothing he could find in the regulations would prevent an ex-felon from getting his license. There is a provision that someone who is charged/convicted of a radio "crime"/violation could have all licenses issued by the FCC revoked.

>things do happen to outmoded techniques.

We do??? What are you reading, Kok? You've got to put those 1922 QSTs
away and start reading more up-to-date goodies. I don't believe anyone
today misses spark.

By the way, spark (Class B emission) was finally outlawed on January 1,
1966 on 500 kHz. Up until that date, Class B could still be used for
distress calls and distress traffic on 500 (Geneva Radio Conference of 1959).
My source for this bit of trivia is Schroeder's _Contact_At_Sea_.

I just received a wonderful book titled _The_Book_Of_Wireless_
printed in 1915. It gives complete details on building both a
low power and high power (500W) spark station. Just for kicks
I'm going to throw together the low power version, then find
a deserted island in the South Pacific (so I won't get arrested)
and fire it up. Listen for me on 160 through 10 meters (simultaneously!).

>

They aren't used in English, but they are used in other languages. I
think it varies from one to another, but for instance in German:

. . - - (dididahdah) = U umlaut
. - . - (didahdidah) = A umlaut
- - - . (dahdahdahdit) = O umlaut

Anyone else fill in the other languages that use these characters? I know
Russian uses them too.

I am interested in purchasing an old electro-mechanical calculator such as the ones made by Friden, Marchant and Monroe from the period of the 1950's through the late 1960's. These calculators did all of their computation with mechanical gears (but were motor driven) rather than using electronics. What I want is one of the more advanced ones that did multiplication and division as well as addition and subtraction. What I would _really_ like to find is one of the units that would do all of this plus square root extraction.

I am also interested in other old calculating devices and slide rules.

If you have an old calculator of this type collecting dust in a closet, and it still works, please send me an e-mail message.

1. Yes, you can reproduce the FCC 610.
2 Use as near the same paper weight as possible.
3. Use as near the same color as possible.
4. Use FCC 610 dated Nov 1993 or later only.

You *could* do that, but you'll be much less frustrated if you use
http://www.ualr.edu/doc/hamualr/callsign.html. You can also use the
telnet server at 'telnet callsign.ualr.edu 2000'. Both of these are
located at the University of Arkansas, Little Rock.

Then again, maybe not. When are you going to get your "no-code" Extra?

>that the above.

Skin effect losses are much higher for braid too. As each strand dives toward the middle of the braid, the current is forced to jump the loose mechanical weave connection to a strand emerging from the center in order to stay on the outside of the bundle. Very bad.

>As an aside, solder should NEVER be used in ground systems. Use either
>clamps, or ideally exothermicly welded ground connections, using products
>made for the purpose by CADWELD.

Actually, solder is OK, it just can't be the *only* connection because it can melt under lightning currents and let the connection come loose. You can clamp and solder if you like. Of course there's little point in both soldering and CADWELDing.

>The following conductors are preferred in ground systems, in order of
>preference: Copper Strap, solid copper wire, stranded copper wire.

Copper tube (pipe) belongs up there too. It's as good as solid wire of the same diameter for RF. Strap is better because currents can flow on both sides of it. With tube, only the outer surface is used, due to that pesky skin effect again. 4 inch diameter tube is as good as 6 inch strap.

>tarnishes so maybe my theory is bogus? I'm sure someone reading
>this will correct me (politely, please).

The reason is that steel is ferromagnetic, so permeability is
much higher, and that decreases skin depth by the relation

D = sqrt(1/(pi*f*sigma*mu))

where:
f is frequency
sigma is conductance
mu is permeability

Copper is non-magnetic so has a permeability of 1, but steel is magnetic
and has a permeability of around 5000, and a conductivity about 5 times
less than copper. So steel wire has a skin depth about 0.0316 that of
copper. That dramatically increases the I^2*R loss, about 32 times more
loss in fact.

I have a mint condition ICOM 2GAT Handheld radio for sale.
Its features are:
Lit LCD Display, Numeric Keypad.

etc. On low power it puts out 1 watt, but on high
power it puts out SEVEN (Yes, seven) Watts! It comes with all
original packaging and manuals intact, a rubber shock resistant
case, and an ICOM hand held mini-microphone with cord and tx light.
The radio is 2 years old and in fine condition. Radio plus
accessories will cost you $257 shipped via UPS INSURED!!!

Call or email if you have questions:
(401)-789-5938
swamik@ele.uri.edu
Swami (KD1QV/AE)

Thanks

>Frank

There are electrical characteristics that make a radio unique. A combination of the stabilization of the transmit frequency on key-up, the exact frequency the radio settles on, and deviation are just a few that come to mind. If one can catalog the "fingerprints" of known users, these fingerprints can be matched up with any cataloged user that decides to jam.

Motron Electronics of Eugene, Oregon makes such a device. There are a number of units in use in the Los Angeles area that are successfully associating known signals with jamming signals.

> mobile or base station receiver, or is it useless feature?

Whether it helps or not is a function of whether the pre-amp is less noisy than the receiver. While the pre-amp will amplify any noise that the antenna receive, it will also help to overcome any noise in the receiver itself.

As I recall, this is all a function of whether the NOISE FIGURE of the pre-amp is lower or higher than that of the receiver itself. The bottom line is the final signal-to-noise ratio.

Also, in the case of most transceivers (especially handhelds), they can receive signals at a greater range than they can transmit. The "ideal" solution to better reception is better antenna gain, since it doesn't introduce any noise, and can even attenuate noise coming from directions other than the signal you're interested in hearing.

946. ISLDX KL7 DX'pedition

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-15 00:00:00 UTC
From: johnn0isl@aol.com
Message-ID: <3u9mj5$l7i@newsbf02.news.aol.com>
Source record: 242365

"The Barren Islands/Fox Island DXpedition"
...a tale of total disappointment to BIG TIME success!

Do you have a back-up plan for your back-up plan?

As you probably know, our plans were constantly changing due mostly to Mother
Nature. We faced rough weather conditions in the Yukon and Alaska which resulted in us not activating a VY1 island or getting to Ushagat Island (PLAN A). We made about 400 contacts using VY1ISL from the shore of Kluane Lake in Canada's magnificent Yukon Territory (some contacts while
mobil).My trusty G5RV hung twenty feet above ground in the pine trees-coupled to
Rick's TS-430 and Larry's AL-80A, the contacts flowed like water!

A couple days later in Homer, our plans were again changing. Luckily, we received verbal permission from AK NWR to land on Yukon Island, just a few miles out
in Kachemak Bay near Seldovia, Alaska. Earlier the captain cancelled our charter to the Barren Islands because of a sudden violent weather front that had
moved in and was expected to last four days. We received permission to land on the west side only of Yukon Island (PLAN B) because the rest of the
isle was privately owned (the owner had refused me access months ago).

We arrived near Yukon Island only to discover we could not stay ashore for
long- at high tide we would have been washed to sea. The beach area was small
with a forty foot high vertical rock wall rendering it unuseable for us. I told the captain to take us back to Homer- we'd just shelled out $375.00 and again were disappointed. I left a message on Dewitt's (W4BAA) answering
machine to let the IOTA gang know our predicament but later discovered I had
reached a wrong number. Hours later we sat "crying in our beer" at a local pub,
soaking wet with aching muscles. This was not fair, we had prepared for every
thing (backup station, generator, extra food, extra gas, clothes etc.) but had no chance against Mother Nature (Murphy teamed with her!). Meanwhile, I'm
becoming more annoyed about all the obstacles we faced and the guys are

now
talking about heading home. Was this the 2nd DXpedition in a row that
we spent a year planning only to again go "bust" (ie- Herschel Island
1994)???
"Hell no I blurted, who's going to Fox Island with me"? Larry piped up
with
"yeah, let's go", but I knew that was inexperience with DXpeditioning, es-
pecially in Alaska, talking. Rick only glared at me- I knew I'd have to
work
on that Alaskan! I poured it on how easily we could do Fox Island and
gave dozens
of reasons that "made no sense at all" why we should. Rick finally said
"yes,
okay- now shut up". Larry said if anyone could make a living selling ice
cubes to
Eskimos it was me! I laughed in pain- we were a team again (PLAN C from
the
hip)!

We were lucky to find a charter in Seward because it was the 4th of July
and
tourist season. Two hours later we were heading for Fox Island on the
Nordic
Tug "Fresh Aire"! We set up the DX camp in a frenzy- Rick and Larry
worked
on the tent and radio equipment while I sawed the top off a scrub pine
tree to
accept the push-up mast and beam. The A3S beam went together in a couple
minutes (tnx to KL7CC's arctic mods) and the captain even helped us hoist
it up!
Around 0800Z July 5th, I'm at the mic giving out US isl# AK-94S and IOTA
NA-197. The beam was up 20' pointed stateside and we were "rockin" with
about 600 watts! Forty-two hours later we had over 1100 contacts with 60
countrie
in our log. We operated by call areas, off lists, operated "split"- it
was a challenge, the pileups were the biggest I've ever experienced! At
times while listening in a 5 kc spread, all 3 of us couldn't recognize
anything intelligible for
minutes on end. One hour operating shifts were about all we could endure
if
we operated alone or if we had an extra set of ears and a logger. About
65%
of our contacts were DX. So, this is what being "very rare" to Europe
meant!
How ironic, our 2nd contact was with John, N6JM, who single-handedly
conquered (qualified) Fox Island only last year! I was one of the "lucky
75" who already had Fox Island IOTA-NA 197 confirmed so it was only
fitting I give John's
island back to him!!! We worked hard and we played hard- all the "thanks
for a

new one" made it worthwhile. Fox Island, N6IV, KF6XC & NL7TB tamed you. From Rick's QTH on Douglas Island, we christened the club call "WL7CND" by
giving out US isl# AK-18S and IOTA NA-041 to about 500 eager island collectors.

A big thanks to SCARC, Jim- KL7CC, Vlad- UT7WZA, Dianne- VE7XYL and all who helped us in any way. Special thanks to Rick, N6IV, for his professional operatingskills, team attitude, top-notch equipment and hospitality shown me. What a fantastic Yukon and Alaska experience!

73 de John, NL7TB

Why not just let the local orgainizations (RACES, AREC) volunteer
assistance? Their local knowledge of the agencies involved, frequencies
used, and geography make them much more useful then some outside
group wanting to play along. Besides, too many people on the radio
just start to get in the way of the professionals.

A lot of sites still have obsolete URL's for the VE7TCP amateur
radio web site. Your links should point to:

http://ve7tcp.ampr.org/

The old site (canada.unbc.edu) has been dead since March.

Thanks,

Everyone uses the rec.radio.amateur.digital.misc group. Very active and
covers all the digital modes, not just packet.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 JULY AND FORECAST FOR 16 JULY - 18 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 14 Jul
Daily Proton Fluence >1 MeV: 8.2E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.0E+06 (normal)
X-ray background: A2.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Jul 17 Jul 18 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Jul: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 14 Jul
Learmonth 6 2222 2121
Fredericksburg 8 6
Planetary 6 6

Observed Kp for 14 Jul: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Jul 15 Unsettled to active
17 Jul 15 Unsettled to active
18 Jul 5 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 18 was issued on 14 July and is
current for interval 15-17 July.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
15 Jul normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Jul normal normal fair
17 Jul normal normal fair
18 Jul normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
15 Jul 30 near predicted monthly values, with up to 50%
enhancements during local night

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Jul 30 About 15% above predicted monthly values
17 Jul 20 Near predicted monthly values
18 Jul 20 Near predicted monthly values
COMMENT: Darwin MUFs: Depressed 30% 08-11UT, near predicted monthly
values at other times. Spread F observed during local night hours.
Townsville MUFs: near predicted monthly values, spread F observed
during local night hours.
Hobart MUFs: enhanced up to 30% during local night hours, spread F
also obsevred during local night.

>steps each lasting 1 second, until the line got to normal voltage.

Sounds like they may have lost a power station somewhere and then
started shedding load at one second increments to get back to proper
voltage. So, I would be surprized to hear that other areas had totally
lost power.

I would guess it never got to 60 - maybe 80 or 90 volts. Half
brightness would imply slightly greater than half power which would
occur at around 3/4 voltage. Your perception of brightness is not a
reliable indication of power anyhow. If your lamp was on a dimmer,
they are even more suseptable to slight voltage fluctuations.

>The air conditioner got very unhappy with this, I turned it off to
>avoid a burn-out.

Right, the compressor would strain to run near normal speed drawing
a lot more current in the process. Its protection would probably
have kicked in if you had not.

>Though my PC didn't even notice this strange voltage behavior, I
>was logged in when it happened. Looks like those switching supplies
>are good at tolerating brownouts!

Switching supplies are quire immune to voltage fluctuations especially
if you are not running near full load.

958. Help on Heath HW24 Dual Band HT

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-15 00:00:00 UTC
From: jeshea
Message-ID: <DBqys7.Is8@ainet.com>
Source record: 242471

ERROR: Sorry the previous message was a mess. I hit the wrong key.

SUBJECT: Heath/Zenith HW24HT Dual Band HT

As most hams know Heath/Zenith or prior to that HeathKit gave up the am market some years ago. I bought a HW24HT just prior to that and I did get an update printout sheet that showed how to program the HT to cover ranges lower than the standard 2M ham band. i.e. the weather band like 162.??? or so. I had this sheet and programmed my unit and all worked well. I moved to CA in the summer of 90' and haven't been able to find it to date. I've written Heath twice and didn't even get a courtesy letter back. So I'm stuck! But perhaps someone out there has the same unit and could I get a copy of the update that is presently lost??

I can be easily reached by my Internet address, my business phone number of (209) 632-9787 (collect of course), my fax at (209) 632-9268 or my home phone of (209) 634-4704. I'm listed in all callbooks from 92' on correct. If it's not 729 it's wrong. I will send any reasonable funds to repay either the call or any info I can get. I don't use 2M much anymore but I think I would carry it more often if I could get some of the other bands. Many thanks.

959. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-15 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-805806005@gonix.com>
Source record: 242472
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.3
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.14 06/14/95 23:45:31
Changes: Added new FTP and WWW sites
Posting-Frequency: posted on the 1st and 15th of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse- click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.

Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament

about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles)

in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/

gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW sites:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html

The advantage of reading the Elmers list at these sites via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about a dozen of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

960. Radio Link To Server;PAY $600

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-15 00:00:00 UTC
From: Vesa Matikka <vmatikka@dream.imagew.fi>
Message-ID: <3u89m7$mgb@idefix.eunet.fi>
Source record: 242473

I'm new to amateur radio experiments,but I have an interesting idea to
use radio (receiver and transmitter,heh heh) to pass data between the
server and PC with high speed (at least 2M bps).The distance is only
about 3 kilometers,and there is no big land objects in the line.
I've planned to build one by myself,since I have done all else
ELECTRONICAL projects.All I need is technical advice,or if anyone could
design (or advice me to design) schematics for the circuitry.According
the low distance,the transmitter haven't to be powerful,but only able to
transmit high speed data to a few kilometers.According to that...:
What wawelength should it use (data transmission rate at least 2M bps)?
How powerful must the transmitter be for that distance?
What kind of antenna should be used?
What kind of data modulation should be used (AM,FM,,,else)?
As I said,I don't know much of radioelectronics,but I design and
construct other devices,as soon as I have the Radio-unit working.
Could some one help me with designing the Radio-unit??Or draw himself the
schematics for that??I'm willing TO PAY for finished and fully functional
charts of the device.I can also accept any help to design it by myself.I
would be grateful for all replies concerning this letter.
BTW,is there possible to build a low freguency transmitter,which can pass
voice and low rate data to about 1000 kilometer distance?How powerfull
would it have to be (little enough to carry...)
Please contact me by E-mail,don't send post to this group!

> strapping is done with RG8 braid.

<<cut>>

RG-8 braid is not a good choice for ground wire. The inductive
reactance of braid is significantly higher than stranded wire, solid wire
or copper strap. RG-8 braid would fail at much lower currents
that the above.

As an aside, solder should NEVER be used in ground systems. Use either
clamps, or ideally exothermicly welded ground connections, using products
made for the purpose by CADWELD.

The following conductors are preferred in ground systems, in order of
preference: Copper Strap, solid copper wire, stranded copper wire.

73!

I would guess it was made by Astatic as a private-label item.
Possibly sold with the Browning Golden Eagle (CB) in the 70's.
It was an interesting rig - seperate tx/rx boxes and very $$!
Every one I ever saw had a D104 with it. The ops used to key
the mic and leave the Rx on so they would get feedback *squeal*
so everyone would know they had a Golden Eagle. (schmucks?)

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I once tried to obtain touchup paint from Heath to cover a scratch on an SB221 which I assembled. They said they could not match the paint due to lot variations and sent an entire new panel instead.

I don't think you'll find it unless you take the piece you want to match to a paint store that has one of the modern scanning systems that looks at the paint spectrum and mixes the paint to match, based upon the spectral analysis.

965. Re: DL0ART/am balloon launch #2 planned

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-15 00:00:00 UTC
From: Oliver Welp <welp@uni-muenster.de>
Message-ID: <3u8kom$1ifk@majestix.uni-muenster.de>
Source record: 242478

The Nienberge Amateur Radio Group (Germany) plans another "small" balloon launch on sunday, 07-16-95.

We planned to have another emergency beacon with our regular balloon equipment, and it now is ready for a launch. Since we have some (smaller) spare balloons, we plan to do a launch with only this rig: 2 m beacon - no data, no remote control, no gas valve; just launching and parachuting (hopefully) "home" after bursting.

Purpose of launch:
Testing emergency beacon and practicing DF (especially coordinating teams).

Planned ARTOB launch 07-16-95:

Launch: # 2
Launch date 07-16-95
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA
Call sign: DL0ART/am
QRG/mod.: 144.991 MHz F1A beacon: call sign and info in cw, in between freq shift slow (- - - - - - = balloon lifts) or fast (......... = balloon is descending)
Power: 100 mW
Antenna: groundplane
Diameter ballon: ca. 3 ft
Gas: hydrogen
Parachute: ca. 5 ft

Talk back via repeater Muenster, DB0PD (R 84). Reports are welcome, please call DL3YBQ or DL9QJ. Or send QSL via bureau, we now have our own QSL cards for the balloon.

Any suggestion or response is always welcome!
Best 73,
Oliver

I am going to be visiting Colorado during the current shuttle
mission (STS-70) and would like to know of any frequencies
that are NOT short wave that I might hear the shuttle
transmissions rebroadcast on.
The areas I will be in are Ft. Collins, Denver, Colorado Springs
and all points in between (along I25 that is).
Any help would be greatly appreciated.

Cross-posted to: rec.radio.amateur.misc,sci.electronics

Comm-Ed dropped power to the areas surrounding Chicago on Thurday and Friday afternoons. This caused all our UPS's in the computer room to switch over to battery power. We had about 100 volts at the outlets. Eventually our batteries ran down so we had to switch back to line power. We continued operations on reduced power without any apparent problems. Fortunatly, this
happened during the day. Our UPS would have taken down the systems once the battery was exhaused, it has to be manually switched out.

This is a potential problem I was never really aware of, and something that a lot of sites that depend on backup power should consider...

Usually the 145.46 and 147.225 rebroadcast Nasa Select.
The 5.46 is in Boulder and the 7.225 is in Denver, you'll
probably catch the 5.46 most of the way from Cheyenne through
Denver and beyond I am sure.

>Square are publishing it) without permission.

This is where things become grey. I can reveal the letter to someone else, anyone else, one person or millions of persons, because it is my property. I can show them the copy, or read it aloud to them, but you say I can't publish it, I only own the *copy*. The question with electronic mail becomes *which* copy. Is it the copy on the screen the *first* time I display it, or is it the copy the *second* time I display it, or is it the bits in memory, the ones on disk, the ones forwarded through the network, etc? Suppose I re-read it on a different machine? Is that still the same copy? Obviously, the message bits may have been copied thousands or millions of times. Which one represents *my* copy? If I send *my* copy of the letter to others, have I published?

The question boils down to whether posting on usenet is publishing as defined under law, or is it equivalent to a group of loungers hanging out on a street corner exchanging tales. I contend it is the latter. If I pass around a letter I received from someone to a group of people on a street corner, I haven't published the letter

under the normal meaning of publishing. I've merely showed my copy
to a group of associates (however many), which is allowed. Rules
devised for ink on paper don't fit well with electronic messaging.

I'll add to this good info. HAVE PATIENTS! It's going to take a little while. Get the book (at Radio shack) "Now your talking". I spent 4-6 hours a day studying it and was ready for my Techician license in about 31 days. Study the book, don't memorize the answers. It's easier to just study the material. You don't need to know morse code for a tech class ticket. However I am now studying the code and hope to upgrade to General by the end of this year. Good luck John.

>Those are even tougher to fight than ordinances. PRB-1 doesn't apply at
>all.

Would it be possible to place a deed restriction restriction on your
house to prevent future owners from placing any antenna restrictions
on it? After all, if you can make all future owners agree not to put
up antennas it you should also be able to make all future owners
agree not to place antenna restrictions on the house.

Could you also add a convenant directing future owners not to enforce
existing antenna restrictions? Seems a little more shakey, but probably
worth a try. Or maybe direct future owners not to hassle antenna-owning
neighbors.

Just think of the pro-ham restrictions you could add to your deed. How
many houses have you owned in the last few years? Has anybody published
a do-it-yourself guide to writing CCR's? Or do you need a lawyer?

978. Motorola Sabre Configurations

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-16 00:00:00 UTC
From: lmilrad@passport.ca
Message-ID: <3ubccb$5ie@diplomatic.passport.ca>
Source record: 242291

I'm interested in acquiring a Motorola VHF Sabre for amateur use. I do a fair amount of travelling and would like to have the capability of having the alphanumerics of the various repeaters accross North America programmed in for me. However, I am somewhat at a loss as to which configuration would constitute the ideal one for me.

During my various trips to Dayton, I have seen all kinds of permutations and combinations and I guess that my absolutely basic requirements are that it is the large unit (model number unknown), DTMF keypad, with the large battery (and a spare), desktop charger (and a wall one if such an animal exists), initially programmed alphanumerically with the 60-70 repeater frequencies I require, and a belt clip, leather case and microphone.

All comments welcome!

Thank you

What little I know about it suggests that if you did, the restrictions would
not be enforced by the courts, because they would most likely conclude that
such restrictions were against public policy. If a community bans antennas
later, one CC&R in the middle of the neighborhood to the contrary would
probably be struck down by a court, I'm guessing.

I'm not sure if anyone has challenged an anti-ham antenna CC&R on the
grounds that it is against public policy (PRB-1, which indicates that ham
antennas are FAVORED by public policy). However, a sympathetic court could,
if it chose, refuse to enforce it if it chose. Just like courts won't
enforce racist CC&Rs (i.e. property can only be sold to X religion, etc.)
and the like, because this violates notions of public policy.

What we really need are more hams on the bench!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 JULY AND FORECAST FOR 17 JULY - 19 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 15 Jul
Daily Proton Fluence >1 MeV: 7.5E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.2E+06 (normal)
X-ray background: A7.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Jul 18 Jul 19 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Jul: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled until 12UT, and
at active to minor storm levels thereafter.

Estimated Indices : A K Observed A Index 15 Jul
Learmonth 21 3233 5443
Fredericksburg 16 6
Planetary 16 5

Observed Kp for 15 Jul: 2112 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 Jul 20 Unsettled to active
18 Jul 10 Quiet to unsettled
19 Jul 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 18 was issued on 14 July and is
current for interval 15-17 July.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Jul normal fair-normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Jul normal fair poor
18 Jul normal normal fair
19 Jul normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
16 Jul 24 near predicted monthly values

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 Jul 20 near predicted monthly values
18 Jul 20 near predicted monthly values
19 Jul 20 near predicted monthly values
COMMENT: Darwin MUFs: 10-20% depressed, with night-time Spread F.
Townsville MUFs: 10-20% depressed 10-14UT, with night-time Spread F.
Hobart MUFs: near predicted monthly values, with night-time Spread F.

: this (preferably under 30MHz) since these students won't have any amateur
: licenses. The transmitted power will be low, under 100mW probably.

Yes, the FCC allows this under their low power communications rules. I
don't have the rules in front of me but as I recall you can operate on
any frequency except various bands dealing with safety of life. The
power, as I recall, must be less than 0.100 Watts with limits on the
antenna. Operation in or above the 0.54-1.7 MHz band seems well suited
to you application. You MUST AVOID interfering with licensed systems.
If you would like more, see if your library has the CFR (Combined Federal
Regulations) which lists specifics. If no luck, send me an E-mail and I
will see if I can locate the rules.

Unless the rules have changed, you should be able to do this in the
AM broadcast band (540-1600 KHz) if you stay below 100 mW. The
advantage to doing it there is that you can use easily-available,
cheap transistor radios to verify operations. You can just pick a
broadcast station with a strong signal as your starting point and
transmit 10 or 20 KHz above or below that, to aid you in tuning. If
you can't tune in that station on your receivers, then you know that
something is drastically wrong.

Just make sure that you verify input power to the final stage prior
to actually transmitting.

984. Re: Apple Petition for Rulemaking "NII Band"

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-16 00:00:00 UTC
From: Ed Mitchell <edmitch@accessone.com>
Message-ID: <3uboge$in5@pulm1.accessone.com>
Source record: 242297
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital.misc

I am personally aware of many companies that plan to build Part 15 devices in the 5.7 GHz allocation in the not-distant future. These devices will operate under existing Part 15 rules. Legally, they must not generate interference to other licensed users and they must accept interference from licensed users. In practice, that rule is already dead in 902-928 MHz from an Amateur standpoint. There are now estimated to be many millions of consumer cordless devices operating in 902-928. Politically, there is no way that Amateurs will tell millions of consumers to get lost even though we have the legal right to do so. Only the AVL
industry for a time got away with threatening consumers - indirectly mostly by telling retailers in some locations of the country not to stock 902-928 MHz devices since they were just going to be interfered with (and as best I can tell, the AVL industry is kind of fading
away since there are other, better technologies today to do vehicle location systems).

In a recently ruling, the FCC did give some "rights" to Part 15 devices at 902-928 MHz. In "our" 902-928 MHz band, co-primary users are ISM and AVL. Hams are "secondary" users. Part 15 users fall at the bottom of the heap. In their ruling (and I'm not a lawyer so anything I
say about laws is suspect - but what good are laws if none of us can understand them?), the FCC specified certain situations in which both Part 15 and Amateur operations are automatically defined as "not intefering" with AVL systems. In effect, they said that AVL systems will have to put up with a certain level of interference. I believe that Apple has seized upon this idea to create a Part "16" device category that could be "more equal" than existing Part 15 devices. But so far, there are zero technical details for the hypothetical Part 16 category. The basic idea, though, is that the band does not turn into "CB" because the sharing "etiquette" is built into the hardware devices themselves. In "CB" the sharing rules are whatever the users do; in the WinForum "unlicensed PCS" sharing etiquette, the devices themselves are constructed to cooperatively share a given spectrum allocation.

The point I'm trying to make is that our access to UHF frequencies is very tenuous. Every single one of our UHF bands is shared with other users. I've had to listen to PAVE-PAWS radar on 440-450; doppler wind shear radar on 448-450 and 915 MHz; I've "watched" microwave ovens on 2.425 GHz ATV repeater output; and I currently live north of line "A" so I've lost all of 420-430 MHz. By developing good sharing arrangements, we have better likelihood of retaining access to frequencies.

I wish we could have clear, big, frequency allocations. But the world is changing. There are
extremely serious proposals to abolish the FCC all together. Some proponents even suggest auctioning *all* radio frequencies. In such a scenario, it is unclear whether "free" users like us would even exist. Since the 1980's I've done a lot of shouting that threats to "our"
frequencies are genuine (here, to the ARRL directors, in other online forums, and even an occassional letter to the editor). There are solutions to retaining access. The ARRL has

successfully fought for Congressional resolutions, that while weak, to help us politically.
I do believe that the FCC of 3 to 5 years hence will be vastly different than that of today and we need to be preparing for that scenario now.

Another thing that we have going for us is that practically everyone in businesses that are building Part 15 devices is also a ham. We do care.

But realistically, I have to do what is right for my employer or they'd stop paying my salary. And that means writing comments that will help us create wireless data services (note that 5.7 GHz is not the only band of interest - these proposals are also looking at the 5.1-5.3 GHz area too). Sure, I could quit, but someone else will step in to my shoes, and then what will I have accomplished? My 3 kids will just go hungry... Instead, most of us, in that we are all hams too, are trying our best to craft rules that will help retain access for the Amateur service.

N6FRI's comments are very good; thank you for writing them.

Ed Mitchell
KF7VY
"These comments represent my personal views and not necessarily those of my employer."

P.S. By the way, I did read the article in QST about how the 5.7 GHz band was used for fire communications. Cool story! I too have been an active ARES/RACES team member since 1984 (ham
since '73) and have personally used ham radio frequencies on fire lines, over seriously injured parties, and in search & rescue situations.

KF7VY is too modest. His QST primer (as WA6AOD) on emergency communications was one of the best
the magazine ever published.

Hams who believe that Data-PCS/NII Band is merely a corporate takeover of ham frequencies would do well to consider Ed's comments.

First of all, if anyone was at the hamfest in Sussex, NJ this Sunday - and knows how to contact the person selling the home-made J-Pole antennas for $20 - please let me know.

I would also be interested in making my own J-Pole. If anyone has plans for a J-Pole that I could use outdoors, please let me know.

For everyone else - I was wondering - I just added a 65W amplifier to my 2m HT - but I think that a lot of the power is wasted because I am feeding it into a 1/4 wave mag mount up on my roof. Would anyone be able to suggest an affordable antenna that I can mount on my roof that would give me some more gain?

In addition, I will be moving to an apartment soon, so any antenna suggestions that I might be able to mount on my window would be appreciated as well.

thanx in advance

If I understand this correctly - the poster is refusing to take the exam from a VE that is handicapped, and couldn't pass the code exam at more than 5WPM.

I've got some news for this individual: VE's don't get paid - they volunteer their OWN time to help amateurs like yourself out. It's not like they get rewarded or compensated in ANY way for their efforts. In fact, all they get is bitching and whining from people like YOU.

If you don't want to take the test from a handicapped VE - that's fine. When you pass your Extra, go out and become a VE - so that people won't have to be tested by handicapped hams. I think that is a disgusting attitude...you have a lot to learn.

Well, actually you can listen in on a 900mhz cordless phone
conversation. They stopped selling scanners with that frequency but
there are several out there before they stopped marketing them.

The best telephone for privacy is a corded one!

well, the obvious answer is a well located repeater. i had the same problem but was able to communicate a good 20 miles by using a good repeater. another option is to get yourself a well situated antenna, a 3 element beam perhaps mounted on the roof pointed at your house (if you're only going to talk to one other person, no sense putting a roter up there). there's also the option of an amplifier.

: Would it be possible to place a deed restriction restriction on your
: house to prevent future owners from placing any antenna restrictions
: on it? After all, if you can make all future owners agree not to put
: up antennas it you should also be able to make all future owners
: agree not to place antenna restrictions on the house.

This is a very interesting question. Property law is conventionally taught with the "stick" metaphor: you have a bundle of sticks, or rights, to do this or that with your property. The trick is that you are allowed to sell some sticks to someone, and not others. An antenna restriction means you get almost all the sticks, but not the "putting up antennas" stick. Now you're proposing to withhold, instead, the stick marked "ability to separate the "putting up antennas" stick from all the other sticks when you transfer the property forever (as opposed to renting, say).

Here's the interesting part: If you lack any stick, but do what you technically can't anyway, and you do it long enough without anyone objecting, the law eventually gives you that stick back. (Or all the sticks. If strangers take up residence in your house, pay your taxes, and so on, they law gives them your house, after so many years, by adverse posession. That's why sticks like "you can't paint your house a combination of lime and pink" and "you can't put up antennas" are given to a homeowners' association or some other legal entity which owns all those sticks and can protect them from stick "squatters". And if they ignore your antenna long enough, they can't tell you to take it down any more.

If the above is correct, and you want this to work, you'd need to find a group, like a local radio club (or perhaps a national one??), to vigilantly defend the restriction long-term (*very* long), and you'd have to make sure that another group would always take over if the current one disbanded. The group would have to look and make sure no restriction was put in at every transfer. Do this wrong and the owner gets that right back. Sounds like a lawyer sure would be handy, but I tend to think an expert could do it without too much trouble.

On the other hand, I doubt a contract to give up the right to petition
the government to enforce a law/ordinance would be upheld; that right
is probably (and properly) considered "unalienable". You have to
change the law, preempt it, or strike it down in court, any of which
is a whole lot easier than getting out of one of those covenants.

Our organization is intended to encourage the spirit of volunteerism between organizations of all flavors and sizes. Facilitating communications between organizaions which 'normally' don't speak to each other because of twisted politics, etc., is another part of our mission, as well as providing a cache of equipment and professional communications engineers with a variety of experiences involving computer, commercial and telephonic communications media and spectra during time of disaster.

Having worked a number of large and small scale national and international disaster assignments, I have found sites where ARES and RACES are great organizations and have excellent leadership skills. Conversely, I've found the majority of these operations to be led by incompetent and beligerent boors who mistakingly believe that the ONLY form of communication useful during a disaster is Amateur Radio - and that it's better to have 4 shadows for one person than to have those 4 shadows in the field where they might have to perform any manual labor. It would be a far better world if I didn't hear, time and again, the phrase, "We're communicators and I refuse to do anything else..."

> Looks like just another professional radio group using the Amateur Radio
> Service to further their goals. At least they process their
> communications through the u.s. command center.

Obviously, you're lack of education has gotten the better of you... First, we are an all-volunteer resource where no person involved in our organization is permitted to receive any financial benefit for any services provided. Second, our primary mode of communications is NOT Amateur Radio - although we are all licensed hams. We also happen to have direct associations with REACT - does that make us CBers? Take the time to find out about that which you prefer to claim knowledge so you can speak with authority and clarity. Otherwise, you may be viewed as a person who has an opinion about everything and knowledge about nothing...

Are you speaking for the entire amateur radio community or just your-
self, John? Just because you might be an appliance operator don't
label the rest of us such. I do build my own gear, as do the hundreds
of subscribers to the QRP emailgroup. Do you think QST, CQ, 73, and the
other magazines would carry construction articles if no one was building?
And why does the ARRL Handbook have the distinction of being the largest
selling technical book in the country? Check the ARRL email server for
a looooong list of component suppliers as further evidence that folks
are still building.

>For the most part they are

From: sco@mindspring.com
Message-ID: <sco.182.001FF31A@mindspring.com>
Source record: 242313

Why not just build a custom case that will house your scanner AND your ham radio. Make it so the scanner is hidden but your ham rig is visible. If anyone says anything about it tell them you are a ham (you should have a copy of your license with you) and that the rig is one of your ham radios.

From: geoffs@onr.com
Message-ID: <3u9qgg$i0q@Sierra.onr.com>
Source record: 242379

The Bug has bitten to buy a new HF rig. I've thought about the HF rig that SGC puts out, it's called the SGC 2000. I've got the operator's manual for it and it looks well thought out and *extremely* rugged.

It's obviously an adaptation of a marine radio since it has no tuning knob and really looks optimized for channelized operation. It is type-approved for ham use and relatively cheap ($1400 from some places) compared to what they're asking for the riceboxes these days. It's easy to remote the head and the box itself doesn't look like it would come internally unglued rattling around in a hot trunk like some of the flimsy junk that comes from Japan. (The only really well designed radio I've seen from Japan that you don't have to take out a second mortgage to buy is the JST-245 from JRC.)

OK. So, who's got an SGC 2000? I'd like to find out what its performance is like (electrically) before I spend a lot of money on something which may be only so-so as far as ham use is concerned. I was extremely impressed reading about the construction and burn-in each radio receives prior to shipping. The transmitter looks tougher than anything else out there. WHat's the RX like? Is the synthesizer quiet? How's the dynamic range?

Please e-mail responses to geoffs@onr.com . Thanks in advance!

Request information about the "Join-in 18th World Scout Jamboree
1995".
I was told that there will be a Jamboree to be held from 2nd until
11th
August 1995 in Holland., and similarly, other camps will be held in
respective countries whereby amateur radio stations will be used to
link
up these camps.
Do anybody know what is the station callsign/s, sked. frequencies
and operating times will be used by the "World Scout Jamboree 1995".
Here in the island of Penang, Malaysia; the state scouts will also be
having a similar camp of approx. 1000 participants, from the 4th till
6th August 1995. An amateur radio station will also be set up for this

occasion, operating under the callsign -

9M2MOC - sponsored by Motorola Amateur Radio Club, Penang.

We would like to establish sked. with similar stations on those days.
Would appreciate a reply via the following internet e-mail address :-

Okay folks, the time has come ...

I want to get my ham ticket and need to know the best and quickest way to get going. I don't want to mess around and drag this out. I just want to do it. I'm not afraid of learning code. If that's part of it, then fine. Let's just get through with it.

You guys know all of the details ... tell me what I need to do and how to get started. I want to transmit voice as soon as possible and would like to transmit/receive for several hundred miles at least. What books do I need, what equipment do I need? Are there "ground school" classes? What about testing? VE's or otherwise? I'm in Raleigh, NC right now. And how long would this all take (on average of course)?

I want to do this soon but I want to be doing it the right way. I've always had a tremendous amount of respect for the ham community because of it's ability to self-police.

Thanks in advance.

Please use my e-mail address: heinisch@vnet.net

I will be able to upload shareware files to several BBS's and a couple of the major Net's for free. I do not work for any of these places so flamers go for it. As I will make no monetary gain from this endeavor I will also make no guaranty as to getting your shareware on any certain time or place. PLEASE do NOT send it to me as EMAIL. The best way for me to get a copy is for you to give me the closest FTP site that it has already been loaded to. I will then go get it check for problems and pass it along. One thing I must have is a letter releasing me to put it on these sites. I will not get into the legal problems with this,which many of you already know.

So if anyone wishes to have their product seen by more people let me know.

1. A Letter releasing me to put it on a commercial or non-commercial site. (just a note is enough)

2.Directions to the site to get it. If it is not on a site we can work out another way I will work with you.

3. I do need some way to check who you really are. a call sign a phone number an address both email and real snail mail. any of these will work.

Please send any replys to drayegon@america.com

The information you requested here is not related to amateur radio. There
are a number of small transmitters that copyly with FCC part 15
regulations, most notably the Ramsey FM-10a. For more information I
suggest you check out the alt.radio.pirate newsgroup where this and other
tranmitters of the type you're looking for are discussed regularly, (along
with illegal broadcast activities that we know you wont participate in).

Any kind of outside or window mount antenna will probably do. I cary a handy talkie with a mag mount and a 30" Dimond/Comet dual band antenna for the rental car and then put it on the heater/cooler or refridgerator in the room. Use of a handy talkie amplifier (RF comcepts type) and a mag mount antenna should do the trick. If one or both rooms face one another and have some elevation ... high rise hotel. You should be able to work with handies and rubber ducks.

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. Amateur Radio Newsline is a audio news service distributed via telephone.
This hardcopy version is produced by Dale Cary - WD0AKO from scripts provided to him weekly by Newsline. It is then distributed to on-line services, bbs networks and internet user jointly by Dale Cary and Steve Coletti.

Editorial comments, news item and all other business should be directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: 3241437@mcimail.com
MCI E-mail: WESTRADIO
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

Dale Cary, WD0AKO
Hardcopy Distribution for Newsline

Internet E-mail: wd0ako@rrnet.com
MCI E-mail: DCARY
Phone: (218) 236-6324

The audio version of Newsline can be recorded from one of the currently operating lines listed below. This list is kept as accurate as possible. If any changes are not listed, please contact Dale Cary - WD0AKO at the above listed addresses.

The following is a QST
A fifteen year old ham radio hero of the 1993 Midwest floods is named 1995 Young Ham of the Year, a California repeater council chairman is ousted in a strange recall vote and meet the new ARRL President here on a special expanded Newsline report number 935 coming your way right now.

(*****
1995 YHOTY WINNER ANNOUNCED

Fifteen year old Adam Weyhaupt, N9MEZ, of Alton, Illinois has been named as Newslines' 1995 Young Ham of the Year. Weyhaupt was selected based on his day to day dedication to public service through Amateur Radio since becoming licensed in 1991. Adam, who was last years runner up was caught almost speechless when he was told that 1995 was his year:

"Thank you very much. I'm just, wow, that just sums it up, wow!" Adam Weyhaupt, N9MEZ

There were many factors that contributed to Adam Weyhaput's selection as 1995 Young Ham of the Year. Back in 1993 Adam spent his entire summer vacation coordinating radio relief efforts during and after the devastating Midwest floods. Even though he was only thirteen years old at the time and to young to accept a field assignment, Adam became the ham radio hero of relief efforts in the St. Louis area.
This by assuming them job of scheduling the around the clock ham radio relief efforts, daily, for over two months.
But that was just the beginning. In July of 1994, at age fourteen, Adam took on the communications task for the United States Olympic Festival '94. Each morning Adam opened the communications center at 8 in the morning and remained on duty until relieved by another adult operator relieved him. This, sometimes at 6:30 at night or later.

"My official title was primary staff assistant to the communications desk. Basically what I did was setup, work and teardown the communications center which ran for a total of 11 days, 11 or 12 I believe. The festival was 10 days long and of course we had little time before hand and afterwards to get all the events set up." N9MEZ.

Adam performed this task from June 27th through July 10th of 1994. Since then Adam has also become a net manager and active in the Skywarn program. Adam says that ham radio and Skywarn have lead him to make a decision for the future:

"I've since made up my mind that I would like to become a meteorologist someday. I haven't narrowed myself down any more

than that as to what kind of a meteorologist or scientist or anything like that. But I would like to be a meteorologist and I think I made that decision, in part, because of my Skywarn activities with ham radio." N9MEZ.

And what advice does the 1995 Young Ham of the Year have for other youngsters who are thinking of becoming radio amateurs?

"Jump in with both feet. Get as wet as you can. It is a lot of fun. They will make, if they aren't already involved in the hobby, they will make a lot of new friends. Those who are already involved in the hobby, get more involved. Don't hesitate, don't say I don't know if I can do this. I'm too young, I just don't think I can do that. I'm sure there is someone, that if you don't know how to do it, would love to teach you. And I guarantee you will be just as good as any adult." N9MEZ.

Adam Weyhaupt, N9MEZ will receive his award the evening of August 19th at the Huntsville Hamfest Grand Banquet.
He will also get to tour Spacecamp Huntsville and the Marshall Spaceflight Center while in the Rocket City.
There are two runners up this year. They are Bryce Duncan, N0YDI of Red Wing, Minnesota and Toby Metz, KB0UIM of Meridan, Idaho. Each will receive a certificate noting their achievement.
The Young Ham of the Year Awards program is sponsored by Newsline with corporate underwriting from Yaesu U.S.A. Corporation and CQ Magazine.

(*****
MEET KB6ZV

A California magistrate has become the twelfth president of the American Radio Relay League. Judge Rodney J. Stafford, KB6ZV, of San Jose, California has served as First Vice President of the ARRL since January 1992. He had been performing the duties of president since February 11th when George Wilson, W4OYI became incapacitated by a stroke. He has now succeeded to the presidency from that position in accordance with the By-Laws.
But who is Arrl President Rodney Stafford? To start with he is a Life Member of the League and holds the necessary credentials for the job. He has served as an ARRL vice president from 1990 to 1992. Before that as Pacific Division Director from 1986 to 1990, and as Section Manager of Santa Clara Valley from 1983 to 1986. He was appointed Municipal Court Judge in Santa Clara County by the Governor Pete Wilson in 1990, and this year is serving as Presiding Judge. He is a graduate of the California State University at San Diego and the Santa Clara University School of Law. He was in private law practice from 1972 until 1988 and served as a Commissioner from 1988 to 1990.
President Stafford says that serving as George Wilson's First Vice President was a great apprenticeship. He says that President Wilson believed in team-building, getting people involved and

keeping them informed. He says that the fact that the ARRL was able to keep functioning so seamlessly while President Wilson has been incapacitated is a testimony to that management style.
The new ARRL President counts photography among his interests in addition to Amateur Radio. Nor is KB6ZV the only ham in the Stafford family. His wife Patricia holds the call sign N6KLI.
Rodney Stafford will complete George Wilson's term of office that expires in January of 1996.

(*****
TASMA RECALL

The head of Southern California's Two Meter repeater coordination council has been recalled. By a approximate three to two majority vote, that itself may be questionable, Attorney Sidney Radus, N6OMS, has been removed form his role as leader of the TASMA political structure.
Radus ouster was primarily the result of a coalition effort on the part of hams from San Diego, Riverside and other outlying Southern California areas over which TASMA has taken coordination responsibility. In their recall petition, Radus was charged with acting outside of TASMA by-laws, acting outside the authority of the office of Chairman, acting in violation of the Rules of the Federal Communications Commission as it regulates the Amateur Radio Service and for putting TASMA in legal jeopardy.
The problem is that none of the charges were ever proven in a court of law. And the way in which many of the recall votes were solicited could causes the entire proceeding to be legally questionable. This is because both sides depended heavily on drumming up proxy votes from the overall ham community, rather than keeping this as a matter to be decided by the current TASMA members.
In the past few weeks, hams across Southern California were subjected to several packet radio campaign messages urging that they take sides with one side or the other. Each side claiming that it supported packet radio and thereby inferring that it had the power to do favors for packet operators. Favors, which in reality neither could possibly deliver.
In the end, it was the same proxy votes rather than the votes of those present at the July 7th meeting in Long Beach that ousted N6OMS. Only about 100 hams were present for the five hour meeting, a meeting that lasted so long that the group was evicted from the hall and had to complete its vote counting in the parking lot!
And even though there are close to three hundred TASMA coordinated repeaters on the air in Southern California, only a handful of repeater owners bothered to show up. This in itself gives rise to speculation that many old-line repeater owner operators are completely fed up with the political shenanigans taking place in TASMA. That, or they feel they have their frequency pairs and feel no need to financially or politically

support the coordinating council.
But one thing is apparent to even the most casual observer. It takes very little time to realize that the TASMA of today is far different than those it was back in 1979.
TASMA has become an organization that is so totally immersed in is own internal political strife that it seems to have forgotten its only reason to exist. To simply advise hams on the best frequency on which to put up a repeater, and to do nothing more.

(*****
KC6LHA GATEWAY CLOSES

Also from Southern California, word that KC6LHA has announced via packet that he has closed his packet to Internet gateway. This, due to some unforeseeable circumstances that prohibits him from continuing its operation. Jerry says that he is sorry for the inconvenience this bring. He says that he hopes another ham in the area will donate his or her time, money, and efforts in providing a similar service. Jerry adds his personal thanks to the amateur community for letting him provide the gateway service for the past few years.

(*****
STS71 CONCLUDES

The STS 71 Shuttle Mir rendezvous mission is over and ham radio helped to make it happen. The Space Shuttle Atlantis landed in Florida on Friday, July 7, at 1454 UTC ending a mission which included the historic first docking with Space Station Mir on June 29th.
Mission Specialist Ellen S. Baker, KB5SIX, and Pilot Charlie Precourt, KB5YSQ, conducted Shuttle Amateur Radio EXperiment activities using the same radio used to rendezvous and dock the two spacecraft. Early reports indicate that the astronauts made successful QSO's with five student groups who had prearranged contacts. They also made numerous random voice contacts with individual amateurs worldwide.

(*****
CB SAREX

An Elkhart Indiana CB channel provided Shuttle-Mir information on 11 meters during the recent STS-71. This first ever service was provided by Keith Thews who also provided SAREX information via his bulletin board and other media.
According to an Internet posting, Keith's on-air service was on CB channel 3 and featured information provided by a local ham. Keith says that coverage included a number of counties in Northern Indiana and was well received on the air.
And before you ask if those could lead to a CB station flying on a future shuttle flight, don't hold your breath in anticipation. If nothing else, there is no way to mount a 108

inch CB whip in the shuttle window which is only about a foot high!

(*****
CHANGE IN PHASE 3D LAUNCH SCHEDULE

The launch of AMSAT's Phase 3 D satellite will be delayed. Reports in the space press, and confirmed by the European Space Agency say that the launch of Ariane 502, the mission on which Phase 3D is manifested, is now set for May 29, 1996. This is almost two months later than the previous April 3, 1996 date. This reschedule of Ariane 502 follows a reschedule of the first in the Ariane 5 series, Ariane 501, from November of this year to mid-January of 1996.

(*****
FRIENDS FOR LIFE

The ARRL has announced completion of a new recruiting video titled "Friends for Life." The 8 minute presentation, directed by Jennifer Hagy, is a speaker's companion for amateurs to show to groups of non hams. The format is primarily taking head interviews with amateurs who describe the positive influence that the hobby has had on their lives.
Contact the ARRL for information on pricing and availability.

(*****
ALWAYS ON THE AIR

And a new video designed to attract teenagers into ham radio is also in production, but not by the American Radio Relay League. "Always on the Air" is being produced by some of the same people who brought you the award winning "New World of Amateur Radio" and "Ham Radio in Space."
And "Always on the Air" is unlike any other ham radio recruiting film or video ever made. This is because it is the story of ham radio from a teenage point of view as seen through the eyes of typical midwest teenager.
Newcomer Cathy Gilliland, KB0FDU of Hiawatha, Kansas joins veteran newsman Roy Neal, K6DUE as host of Always on the air. Those of you who follow the ham radio convention circuit may already be aware of Cathy. For those who do not, she is the very talented teen who has emerged as a sought after spokesperson for recruiting youngsters into the amateur radio service.
"Always on the Air" is being taped primarily in Alabama, Kansas and Missouri. This is well away from the big city environments of past ham radio recruiting videos. The show also features the original music of Andrew Huddleston, G3WZZ and his wife Lissa with the Nashville based "Ham Band" and should ready for release sometime in 1996.

(*****
ON-LINE MAGAZINE AVAILABLE

A new Amateur Radio Operator OnLine Magazine is up and running and available on the World Wide Web. This is a little different from other Web pages. It is a complete magazine on-line with links between articles and pages.
Since this is the first magazine of this type for Amateur Radio, the creators are interested in receiving feedback from readers. The creators of the Web pages are also looking for future articles to include in the on-line magazine. For more information send an e-mail message to evegraph@aol.com.

(*****
DX

In DX, word that all Amateur Radio-licensed delegates and observers to the International Amateur Radio Union Region 2 conference in Canada in September have been extended temporary operating privileges for the duration of the conference. Industry Canada, the country's licensing authority, extended the privileges for the duration of the conference, to be held in Niagara Falls, Ontario from September 25th to the 29th. The assembly will also have an amateur station, CY3IARU, operating from September 22nd to October 1st.

(*****
DX-9Q2L

In other DX news, PA3DZN has announced that QSLs for the 9Q2L operation go via PA3DMH and not PA3DLM. Alex says that PA3DLM is the QSL Manager for his operation as 9X5EE only.

(*****
INTERNATIONAL POSTAL RATES GOING UP

And DXers will want to take note of this. K1LEC says via packet radio that the U S Postal Service is increased international postal rates effective July 9th. The new rate will be 60 cents for the first half ounce or $1.00 for a one ounce letter. Postcard rates also dave been increased.

(*****
FAMILY OF CALLS

And finally, ask a ham radio operator what's most important to him or her, and the answer is probably their callsign. Think back to the day you saw your callsign for the first time. You had been anxiously wondering what it would be, and you finally got your answer when your license showed up.
When couples get their licenses together, it's not unusual for their callsigns to be issued consecutively. Kathy and Don Falls, who live in Carleton, Michigan, thought that might happen to them.

After all, they had both studied for their ham licenses with the help of a Monroe county Michigan amateur radio club, and both passed their tests for codeless Technician licenses. Sure enough, Kathy and Don DID get consecutive callsigns from the FCC. No big deal, you say? Well, how about this. Not only did they get consecutive calls, but in what must be unheard of odds, their licenses were issued just as one callsign block ran out and another one started. Kathy's call is KB8ZZZ. Don is KC8AAA! The Falls are loving amateur radio and are active on 2 meters. And they're already looking ahead to the HF bands, by planning to upgrade. Our advice to Kathy and Don? Keep those callsigns when you upgrade...they're a one in a million shot!

Not too many people know about this. The only use I get out of
the FM module on my HF rig is to (politely) tell people that they're
unintentionally jamming a satellite downlink.

Just keep in mind that many of them can't hear the satellite downlink.

I don't see what difference it makes to anyone other than the originator and receiver of the message. Unless, of course, you are in the habit of saying things that you would really not like anyone to hear. And in that case, it seems the solution is easy. Wouldn't you expect this to fall into the same domain as cordless phones?? You can't guarantee the privacy of what you say, so don't say anything you wouldn't want quoted!!

No, that's incorrect. In 1987 I requested a duplicate - the FCC
not only issued the dup but also renewed my license.

>Then again, maybe not. When are you going to get your "no-code" Extra?

I'm content being a General. Been one for 18 years.

To be honest with you, Jeff, yeah, I do. Just like they keep running crap
about traffic handling in QST.

You're right, some people still like to build, and that's a good thing. On
the other hand, the vast majority of hams don't build stuff and never will.
This too is OK.

Yeah, I know. But it also indicates that public policy favors amateur radio and letting us put up huge, 170 foot towers and 6 element beams in the middle of quite, leafy, suburban neighborhoods. We are permitted and encouraged to run 1.5KW rigs, and raise hell with people's telephones, none of which nowadays are able to function anywhere near a ham SSB station.

At least I think that stuff is in there.

: keyboard driven CW may be a good way to go if we want DX contacts?

Internet might be a bit of an overkill for trying to get the word out
for a 2M or 440 net. Maybe it would be best to contact the local
radio clubs in your area and get a core-group of interested local people
started. An active net usually will attract others of similar
interests who tune across your net.

Just a couple comments about the computer CW: I don't operate 6
meters much, but the majority HF CW contacts I've made over the years
would be very difficult to copy on a computer. On crowded bands there
are usually many signals (some much stronger than the one you are
trying to copy) very close in frequency. With proper filters and
equipment it may be possible to separate them so that the computer
could copy the desired station, however I don't think that most
stations would have much success. In addition, not being able to copy
code would make it very difficult to recognize that a station is
calling you so you could properly tune it in for the computer.
Anyway, it could be a difficult/frustrating thing to try to do.

You may not have these same problems on 6M, but it's something to
think about.

A question to ponder: If it is the intent of many of the Techs to
learn CW so they can upgrade, would this reliance on
computer-generated Morse help or hinder their effort to learn code??
Maybe it would be good to make manual CW a part of your net so those
trying to learn can get some on-the-air experience (which is extremely
valuable) without the intimidation factor...everyone on your net would
be beginners. Just a thought.

--cut here--
A Copper Tube J-pole
by Ed Humphries - N5RCK
edh@hpuerca.atl.hp.com

The following is a description of a J-Pole antenna made from copper
pipe. You can use 1/2 inch to 1 inch pipe (wall thickness will
affect stiffness/stability AND price, but not performance). Larger
diameter pipe increases bandwidth, but 1/2 inch is fine for amateur
frequencies. Start with a 10 foot (standard) length of pipe, 1 90
degree (right angle) fitting, 1 "tee" fitting, 2 end-caps, 2 hose
clamps (worm-gear adjustable of the appropriate diameter), and your
coax (end stripped, braid separated, center conducter stripped, and
coax sealant to close opening in coax to keep water out). Use a tube
cutter (for best/easiest results) and cut the 10 foot pipe according
to the dimensions needed following the diagram below:

```
--
| <=endcap
|
|
5/8 | for 146 MHz
|
|
wave |
|
|
|
-- | | <=endcap
| | 1/4
| | wave
| |
```

```
coax ctr conductor=>* *<= coax shield
| |
@ 5"-->| |
tee => --- <= elbow
|
| < "leftover" pipe
|
```

For best general purpose use, the 5/8th wave version should be used. The dimensions to cut are: 66 1/2 inches (5/8 + 1/4 matching section), 19 inches (other half of 1/4 matching section), 3/4 inch (joins the tee and the elbow), and the "leftover" 33 3/4 inchs that forms the base. Use standard plumbing solder methods to join main section to base using the tee. Use the 3/4 inch piece and the elbow to attach the 19 inch piece. Be careful to keep pieces parallel.

This will give you a center frequency of 146 MHz. Attach the coax as shown using the hose clamps. Adjust the swr at 146 MHz by sliding the connections up or down as needed -- you should be able to reach very close to 1:1 (best to do this in approximately where you intend to use the antenna - the base can be attached directly to a mast by two hose clamps). Try not to be standing right by the antenna!

It has been noted that this design can lead to rf coupling onto the feedline. To avoid this, put ferrites on the coax at the feedpoint, or use 3-5 turns (@1") of the coax taped together at the feedpoint.

Other center freq dimensions: (adjust 5/8 section accordingly).
144 =19.25 inches, 145 =19.12, 146 =19, 147 =18.86, 148 =18.73.
--cut here--
TV Twin-lead J-pole
By Ed Humphries - N5RCK
edh@hpuerca.atl.hp.com

The following is a description of a J-Pole antenna made from 300 ohm TV twin-lead. They have quite a few advantages which include improved performance for 2-meter HTs, portability, and low cost.

```
| | do not short this end.
| | (when trimming for vswr, cut both sides)
| |
| |
| |
3/4 | | Technically-speaking, this is a 1/2
wave | | wave end-fed antenna with a 1/4 wave
| | matching section.
| |
| 1/4" gap
| | (trim for vswr _below_ gap)
| | 1/4
| | wave
| |
```

```
coax ctr conductor=>* *<= coax shield
1 1/4"-| |
-*- solder the twin leads together at bottom
```

For a center frequency of 146 MHz:
1. Start with @54" of TV twin lead (flat, NOT foam core)
2. Strip 1/2" of insulation at bottom and solder wires together.
3. Measure 1 1/4" from soldered wires and strip insulation on both sides. This is the solder point for a coax feedline.
4. Measure 16 3/4" from coax shield solder point and cut out 1/4" notch.
5. Measure 50 1/3" from coax center conductor solder point and trim off twin lead at that point.
6. Feed with a length of RG58U coax. Tape coax at feedpoint to the twin lead for strength and seal coax for weather protection.

It has been noted that this design can lead to rf coupling onto the feedline. To avoid, put ferrite beads on the coax at the feedpoint, or use 3-5 turns of coax (1"-2") taped together at the feedpoint.

You may attach an alligator clip to the plastic on the top of the antenna in order to easily hang it. Alternately, punch a hole near the top and use a length of fishing line to hang.

This design appears on many BBSs, in club newsletters, and in books; the earliest reference that I know of is a Jan. 1984 D.A.R.C. antenna article by James Burks, KA5QYV.

FYI, the 1/4 wave sections for other center frequencies are:
144 MHz =17 inches, 145 =16.88, 146 =16.75, 147 =16.65, 148 =16.54

I usually just go ahead and solder the coax in place and trim down to as close to 1:1 vswr as I can get. I use the MFJ vhf antenna analyzer and a frequency counter then afterwards test with a radio and in-line swr/power meter. When done, the antenna should also present 1:1.2-3 vswr in the center of 444MHz band as well (demonstrated on my dual-band meter and Alinco DJ-580). You will need to trim in a 3:1 ratio to maintain the 3/4 to 1/4 wave.

QRZ says no previous license, so he went straight to Extra. As to
the 1x3 call, an applicant can request a call in any group his license
qualifies him to hold, IE an Extra can request a group A, B, C, or D call.
Maybe he just wanted a 1x3, it is a more traditional call form, even
if it does start with N instead of K.

>covers all the digital modes, not just packet.

Rec.radio.amateur.packet is a defunct group. It was
replaced by rec.radio.amateur.digital.misc in the last
great re-organization of the rec.radio groups. There was
a proposal to form an entire rec.radio.amateur.digital
hierarchy, including a rec.radio.amateur.digital.packet
group, but that failed to pass, and all we have now under
digital is the rec.radio.amateur.digitial.misc group. The
old .packet group should have been rmgrouped from all
participating systems by now. If it still exists on a
system you use, ask your system administrator to remove
it.

: such restrictions were against public policy. If a community bans antennas
: later, one CC&R in the middle of the neighborhood to the contrary would
: probably be struck down by a court, I'm guessing.

A community can not ban antennas through the use of CC&Rs after you
own the property. Antenna banning CC&Rs are initially established
by the developer (usually) and then continue to be enforced through
whatever homeowners association may exist for the community.

That, however, is not the same as a town, city, county, etc. enacting a
zoning ordinance that restricted antenna hights or tower hights.
Those zoning rules carry the weight of law and even if your deed
said you were allowed antennas, that cab and would be over ridden
by the law... again, to the extent that any such law, zoning
restriction was still consistent with PRB-1.

: I'm not sure if anyone has challenged an anti-ham antenna CC&R on the
: grounds that it is against public policy (PRB-1, which indicates that ham
: antennas are FAVORED by public policy).

As others have said, PRB-1 has no applicability to CC&Rs. So far,
I've yet to see or hear of any CC&R challenged on the basis of PRB-1.

: However, a sympathetic court could,
: if it chose, refuse to enforce it if it chose. Just like courts won't
: enforce racist CC&Rs (i.e. property can only be sold to X religion, etc.)
: and the like, because this violates notions of public policy.

Many CC&Rs are not enforced at all for extended periods of time and that
is probably the best method to have them invalidated. Often, the homeowners
association disbands, etc. If it can be shown that no enforcement
has been done for an extended period, the case can be made that the CC&Rs
have been abondoned.

Hey Jeff

Did your examiner wear a green checked jacket and thin tie, while sporting a crew cut hairstyle??

I thought it used to be a sort of uniform for them. I know mine did. Hate to say this but I have taken the test three times in my life. First was an all night bus ride via Greyhound.<300miles one way> Second time I drove there the day before 250 miles. This time only 50 miles. Course if I would quit moving and being off theair for a few years at a time. HIHI I probably wouldn't have to take the test again. BY the way if you search my call sign you will notice there is no previous call. I took it from start to finish in one setting. Trust me folks if I can do it anyone can.

Ithink it really matters how much you want something.

This has been argued VERY recently in the Jimmy Rich case up here
in Foster City. That is roughly the arguement used to support the
setting aside of the CC&R's that didn't allow antennas. The
city had inacted an antenna ordinance that wasn't near as
severe as the CC&R's(this later changed thru the course of the
trial...) Jimmy used the city rules to apply for a tower(he was
encouraged to do this by a city employee no less...) Anyway, the
neighbors(many blocks away!) complained, and filed suit.

From my understanding, Jim's lawyers used the arguement that the
state had an over-riding interest in fostering amateur radio, and
thus the CC&Rs were against public policy. I guess the court
disagreed. Jim lost.

: What we really need are more hams on the bench!

Well...we do have Judge Rod locally...it helps when you have the
president of the ARRL on the bench ;-)

Radio Amateurs At Oshkosh --

I am bringing back with me the prototype of a simplex repeater. It will be operational from Wednesday, 26 July through Sunday, 30 July.

Frequency: 147.425 simplex CTCSS 107.2 PL 5 watts
10th floor of Gruenhagen hall at the UW-O dorms.

To use:

Simply state your message (20 seconds maximum) on 147.425 with 107.2PL. In three seconds after you stop transmitting, the message will be rebroadcast on the same frequency, same PL. You cannot get this message to repeat itself automatically. YOU are the control operator and YOU must give your callsign when using the machine.

There is one other "mailbox" feature that you may find useful. Touch-tone the number 1 and record up to a 20 second message. The machine will repeat the message just as a regular message. However, touchtone 9 and the message will repeat. Touchtone * and allow the machine to cycle. Then touchtone 9 again and the mailbox message will repeat again. You can get the mailbox message to repeat as many times as you wish by going through the *-wait-9 cycle. Touchtoning 1 will erase this mailbox message and allow a new message to be input. A second mailbox message cannot overwrite the original message until it has been played back at least once.

If anybody has a reason that this frequency or pl won't be suitable, email or post immediately so that we can get the latest data to people before The Show.

See you at The Show

Jim

I'd recommend Super Morse for the learning drills.. Use the Farnsworth method..

Also, throw away any handkey you might have, and get an electronic Iambic keyer and a squeeze-paddle.. As you learn to copy the code, start practicing sending it as well.. Your receiving speed will jump because you can send faster than you can receive, and it will automatically help you learn to recognize characters faster!

When you get your license, get on the air with cw and stick with it.. Conversational cw is a blast when you're going 40 to 50 wpm.. Lots of us do it all the time! You get there by operating, and by starting out with a keyer.. A handkey will hold you back, and make you HATE cw!!!

Have fun!

Like me, for instance. (Well, technically I *started* as WN7EEL, but they sent me the upgraded callsign a month before I upgraded to Advanced, since I was on the tail-end of the Novice-specific callsign era... ;-)

(In fact, I moved out of call district 7 just after they stopped requiring a change of callsign because of *that*, if I remember correctly.)

Corben:

I'm not sure this response will really answer you question, but it may provide you with a baseline.

Last year my two brothers and I rented a beach house in Nags Head, NC for a week. My sister-in-law holds a no-code tech license (N3SYE), and we both had our little Kenwood TH22-AT handhelds. On afternoon, a friend and I took a stroll up the beach for a distance of about 2 miles. We had one of the HT's with us equipped with a short rubber-duck antenna. My youngest brother was back at the beach house (with my sister-in-law) using the other HT equipped with my 5/8 wave magmount antenna sitting on the second floor balcony. We could maintain clear contact throughout the entire walk.

Now this was on 2-meters (VHF). On UHF you can use a more efficient pair of antennas. Furthermore, the terrain was flat, so I think your performance would be at least as good on UHF.

I think a range of six or seven miles is possible if you use an efficient pair of antennas, a couple of Watts of power, and some antenna height at one of the communication points.

Nothing personal but why would you use an non-standard simplex
frequency? 147.42 is a recognized simplex freq, as is 147.435 (albeit
infrequently used). Your choice could interfere with two standard freqs
instead of making good use of just one?

You *sure* QRZ says no previous license and not no previous Call Sign?

I'll hazard the guess that he was licensed with a Group "C" call sign as
either a Tech or General and just kept the call when he upgraded.

Bet QRZ has me wrong!

>a do-it-yourself guide to writing CCR's? Or do you need a lawyer?

Speaking as someone who has been subject to CC&Rs in my last two
residences and served on an HOA board, I can tell you that CC&Rs can be
changed but it isn't always easy...

Most CC&Rs are writen by the developers of an area. They can be changed
by a homeowners association assuming that the authority to do so has been
given to them by the developer (AKA the decalarant). Usually the
developer gives up most of it's authority when all of the units
(houses, condos, whatever) have been sold and they are done developing.
While the units are being sold the developer has more votes than owners
(In the case of where I was living - both areas - the developer had three
votes for every unit they still owned to a regular owner's one vote.)

Certain items in CC&Rs may been required in order to subdivide, get
permits, or financing.

The purpose of many of the use restrictions (where ant. prohibitions are
usually found) are there to keep the place looking "sanitary" while the
builder is selling the units. After that, the HOA might relax some items
- we lightened up on parking restrictions and let people park in their
driveways - but antenna restrictions stayed.

You can usually petition the board of directors to change the CC&Rs and have those changes recorded. You might have a complete antenna prohibition changed to allow antennas on a case by case basis with association approval - perhaps an archetectural review or whatever. But be aware that what is a thing of beauty to a ham (a big shiny tower) will probably be an eyesore to your neighbors and potential buyers (effecting resale value). With that in mind, the association will likely stand behind a restriction on towers in the name of protecting property values. And I have to admit that in my situation (townhouse with small yards) I would not support a petition to permit the contruction of a tower.

A major change would have to be recorded

PRB-1 will not help you if CC&Rs prohibit antennas. You are on your own. Be prepared to make a political investment, offer A LOT of compromises, and still not get what you want - if anything.

Because out here on the Left Coast, .425 is a common simplex
frequency. If we get back there and find we are interfering, we will
simply change frequencies. That is the wonderful thing about a
simplex repeater -- no cavities, no diplexer, no duplexer -- to change
frequency, you simply tune the transceiver to that frequency. Period.

Sorry Jeff it was mostly on packet. I didn't realize you didn't
do packet. I'll summarize. A VE from Las Cruces NM posted on packet
alleging that with wavers a no-code extra ticket could be obtained.
As I am sure you know, that cannot happen, there is no exemption to
the 5 WPM for any reason.

This seemed like a reasonable forum to dispel a budding urban legend.

Pardon me for referring to something you had not heard of. I would
have sent it to you via e-mail but I'm not allowed to do that.

Please feel free to resume the personal attacks.

If you read my post a little more carefully you would know I was speaking
about the majority licensed hams. But clearly from your response you
didn't read the portion acknowledging the existance of the hobbists like
yourself who still build their own gear.

>I do build my own gear, as do the hundreds
>of subscribers to the QRP emailgroup. Do you think QST, CQ, 73, and the
>other magazines would carry construction articles if no one was building?
>And why does the ARRL Handbook have the distinction of being the largest
>selling technical book in the country? Check the ARRL email server for
>a looooong list of component suppliers as further evidence that folks
>are still building.

You are fooling yourself if you think the majority of the hams are still
building their equiment. Radios for the most part are no longer built
from scratch by hams. The true ham hobbist is a dying breed because
the next generation ham operator is not interested in building their
radios.

Who says the ARRL Handbook is the largest selling technical book? I would
challenge you that the CRC math handbook is a larger seller than the ARRL
Handbook. You have fallen for the marketing hype from some ARRL hack.
I'm certain there are other books that sell better than the ARRL Handbook,
but it isn't advertised. Don't believe everything you are told.

>

: >ten bucks, after all), but I'm not sure the easiest way to get this
: >rod out of the ground! Can anyone offer suggestions?

: It's usually better to spend the $10 and buy a new rod rather than
: trying to retrieve the old one. If it's well set, it's going to be
: a bitch to remove, and if it's been there a while the copper plating
: is probably corroded anyway. If you must try, use a Hi-Jacker, a
: stout chain, and the wire clamp as a chain anchor. It won't come
: easy, and you may need a sledge to rock it side to side a bit to
: make it come at all. I've totally stalled the hydraulics of a 4020
: John Deere trying to lift out an old rod. I normally just cut it
: off below grade and leave it.

I use a "ground rod remover". It's your el cheapo auto floor jack. Make
sure the clamp is on tight, wheel the jack up to the rod, hook the lifting
cup under the clamp and pump away. You will need to retract the jack and
move the clamp a couple times. Don't know how many times I've moved
ground rods in this good ol' California foothill clay. If you put the
rod down so far that you can't get the jack under the clamp, I've used
a five foot pry bar and some 2x4's to get up to where the jack can
grap it. I don't install them so low now.

I've been using the same rods now for 6 years. The end is a bit corroded,
but the copper is fine. To install them I use a fence post installer. It
is a steel pipe about 2 1/2 foot long, handles on the side, and the top
closed. A few bangs with this and the rods just sinks into the ground.

I just got my callsign friday evening, and am now a no-code
tech ham. I have purchased an Alinco G1-T and have already made some
contacts.
There is something I'm worried about. I live in southeast GA,
where the temperatures inside a car in the summertime can get
downright ridiculous. I take about a 30 minute drive to school every
day and back, and would like to take my radio with me, after all,
that's part of being a ham, right? I don't want to lug the thing
around campus and take it to class with me, but I'm frightened
of the outcome if I leave it in the car, even with the windows
cracked. What if I covered it up with a towel and put it under
the seat? I'd like to know what others think and how others
handle the effects of summer heat on their equipment. Thanks.

I don't know how far off a 610 imitation has to be before they'll toss it.
White paper is obviously out; I found "cream" colored paper from Hammermill
that was quite close to the color of the last authentic 610 I handled.
A long time ago, Nick Sayer came up with a postscript version which he
ran by someone at the FCC, which I've included below. (Perhaps Nick will
see this and post any improvements he's made since then...) It needs to be
printed double-sided, of course; if your printer doesn't do that, print onto
white paper then take it to a duplex photocopier.

> Newsgroups: rec.radio.amateur.policy

The FCC replied to my letter asking for approval of my PostScript 610
forms. The person who answered witheld "official" sanction and instead
referred me to the Office of Managing Director, but she also returned my
copies with a half dozen corrections -- some of which had previously
gone unnoticed. So this version has all the corrections that both
the FCC and a few respondents could find, plus uses a closer font for
most of the text. So without further ado...

----- cut here - fcc610.README -----
If you want to use this code to generate a pre-filled 610 form, you need
to prepend the code with a postscript file containing a dictionary
called FORM. The key-value pairs in FORM are listed below. If a key
is not present in the dictionary, the data it represents will be left
blank. Boolean fields place an "X" in the appropriate box if true.
date-string fields must be strings consisting of 6 numeric digits,
month, day, year. Be sure to zero-pad if a month or day is less than 10.

Key Type Description Location

/FIRST string First name 1
/MIDDLE string Middle Initial 1
/LAST string Last name 1
/SUFFIX string Suffix (Jr, Sr, etc) 1

```
/BIRTH date-string Date of birth 2
/STREET string street address 3
/CITY string city 3
/STATE string state 3
/ZIP string ZIP code 3
/4A boolean New license 4A
/4B boolean Upgrade 4B
/4C boolean Name change 4C
/4D boolean Address change 4D
/4E boolean Callsign change 4E
/4F boolean Renew 4F
/OLDFIRST string Prior first name 4C
/OLDMIDDLE string Prior middle initial 4C
/OLDLAST string Prior last name 4C
/OLDSUFFIX string Prior suffix 4C
/CALL string Callsign 5A
/CLASS string Operator class 5B

%
% FCC610.PS
% Federal Communications Commission form 610
% Version number kept below
% Written by Nick Sayer, N6QQQ
% I don't think I can claim copyright on this since it is a federal
% form.
%
% This version has been examined by the FCC and contains corrections
% they caught. I would therefore suggest that this version be used
% in preference to previous ones for submissions to the Commission.
% I still have to run through one or two more hoops aparently before
% this form is "officially" blessed, though, so if you use this form
% and the FCC kicks it back, don't blame me!
%
% One hint: The paper color is critical. I have submitted 610 forms
% photocopied onto 'Goldenrod' paper and have had them accepted,
% but white won't work. The FCC uses paper color to sort the forms
% from various services out more easily or something.
%
% The source for this form is the 11/93 version of the form.
% The original indicia (here deleted per FCC policy) said
% 3060-0033, expires 08/31/95.
%
% The form was carefully measured with a ruler to the nearest millimeter.
```

```
%
% Here are the differences you may note in the form:
%
% 1. OMB notation at upper left omitted.
% This in keeping with FCC policy for privately generated forms.
%
% 2. Possible measurement errors.
% I only measured to the nearest 1 mm. Some lines had to be moved
% very slightly to make room for the font I used (especially in
% section 2A).
%
% 3. There is a version number in the top right corner of the back.
% Delete it if you like. I'd go nuts without it given how many
% times I've printed these out.
%
% 4. AvantGarde is the closest font I could find to the one the FCC
% used. It's not an exact match. Their font is certainly a
% sans-serif font but it's taller. I think it's close enough.
%
% Any other differences are probably bugs.
%
% This version has been tested under Ghostscript, NeWSprint 2.0 and
% OpenWindows 3.3 DPS (pageview). The date-line procedure produces
% eroneous results under NeWSprint, but I think it's a NeWS bug.
% Apart from that, it works fine on all the platforms I've tried.
%
% This version allows you to prepend a dictionary to this file. The
% dictionary will be used to fill out the front (only) of the form.
% See the accompanying README file for a list of dictionary entries.
% The fields will be filled out in Courier 12 pitch font so that it
% looks just like a typewriter.
%
% VEs may wish to print a large number of forms back-only in advance of
% a test session, then load all of the resulting pages in a laser
% printer at the test session. Then for each examinee they can run a
% program that will pre-pend the dictionary as appropriate and
% run the first page only. The result would be a fully-filled
% 610 form ready for 4 signatures. If you do this, you'll want to
% use one of the many EPS page splitter programs to make front-only
% and back-only renditions.

|> agree not to place antenna restrictions on the house.

Yes, one can do this. I have.

|> Could you also add a convenant directing future owners not to enforce
|> existing antenna restrictions? Seems a little more shakey, but probably
|> worth a try. Or maybe direct future owners not to hassle antenna-owning
|> neighbors.

No, you cannot do this. CC&Rs are contracts, you cannot create a
contract to abrogate existing contracts.

|> Just think of the pro-ham restrictions you could add to your deed. How
|> many houses have you owned in the last few years? Has anybody published
|> a do-it-yourself guide to writing CCR's? Or do you need a lawyer?

Before signing any important contract, see a lawyer.

The CC&Rs associated with real estate are a contract, like any other.
Good legal advice is simply prudent, if you are concerned with
the details of the contract you are about to sign.

SB QST @ ARL $ARLB071
ARLB071 ARRL supports changes

ZCZC AG38
QST de W1AW
ARRL Bulletin 71 ARLB071
From ARRL Headquarters
Newington CT July 17, 1995
To all radio amateurs

SB QST ARL ARLB071
ARLB071 ARRL supports changes

The ARRL has filed comments on FCC WT Docket 95-57, a notice of proposed rule making on five items of importance to amateurs. These items, described in detail in page 82 of July 1995 QST, are:

1. A lifetime amateur operator license, originally proposed by the League in a petition filed January 6, 1994. The ARRL said in its comments that it believes a ''relatively substantial'' number of amateurs would benefit from such a lifetime license. However, the League said that the Commission's proposal is not quite what the 1994 petition requested, but, rather, that former licensees be given credit for examinations passed in the past. This would create an unnecessary burden for volunteer examiners, the League said, and would assign to them a function contrary to the Communications Act.

2. On April 4, 1994, the League petitioned the FCC to change the number of bona fide members necessary to constitute an Amateur Radio club from two to four, for the purpose of applying for a club station license. The FCC has recently resumed issuing of club station licenses after a 15-year hiatus, and the League said that since the FCC no longer requires the filing of organizational documents from clubs, that increasing the required number of members to four (as the FCC has proposed in WT 95-57) is more important than ever.

3. The League strongly opposed the creation of a ''session manager'' for volunteer examiner test sessions, as proposed by the FCC based on a petition by the Rules Committee of the National Conference of Volunteer Examiner Coordinators. The League said, among several arguments, that there is no reason why the (required) three VEs should not be held jointly responsible for the proper conduct of an examination, and said that the FCC's plan would undermine the integrity, both perceived and actual, of the VE program.

4. The League supported a proposal that the FCC issue special one-by-one call signs for certain special event stations.

5. The League also supported allowing portable indicators to be sent before, after, or both before and after the station call sign, as the operator chooses.

There's a use of Morse (by light) in -Beach Music- by Pat Conroy. He got the letter K right, but seems to think that short-short-short-long-long-long is a 3.

This last has been proposed, in a letter to QST, for the @.

I've always tried to get "originals," which includes those that ARRL sends us (VEs). [ARRL apparently gets camera-ready copy from FCC and makes their own.] This is because I've worried they might toss it if it wasn't close enough. Whether this happens might depend on who's opening the mail that day, I suppose.

My question: Has anyone heard of a 610 not being processed because it was not close enough to looking like an original? I'm not talking about, say, a copy on white paper, or an ilegible copy, etc.

73, Jud.

From: plaws@comp.uark.edu
Message-ID: <3ue5no$23f@wizard.uark.edu>
Source record: 242280

jackl@pinetree.microserve.com (WB3U) writes:

>There is ample evidence that this conclusion, which summarily dismisses the
>relationship between code testing and behavior, is faulty. The multitude
>of illegal CB activities are also perpetrated by no-code operators.

Sigh. I thought only the denizens of r.r.a.policy were humorless.

The point was that this round of fines, like most others in recent memory,
were levied against operators that *passed* a code test of at least 13
w/m. Not Technicians. Get it. Though I'm no English major, I believe
it's known as irony.

As for the folks who think they were fined for HF violations:
"Four amateurs cited by the Federal Communications Commission for
malicious interference on the 2-meter band have had the amounts of their
monetary forfeitures adjusted. " - ARLB068

As for the "fishy" call signs, N5Jxx would be from about 1986, KA5Oxx from
about 1984, N5Rxx 10/90, and WB5Lxx from probably the late '70s.

Probably because out here on the Left Coast, .425 is a commonly used simplex frequency. If we get back there and find we are messing somebody up, we'll just change. That's the nice thing about a simplex repeater -- no cavities, no diplexer, no duplexer, just change the frequency of the transceiver.

The following is from QST's "It Seems to Us..." column:

The question: Is an amateur radio operator to be permitted the right to erect an antenna pole or tower on his own property?

Sounds odd, doesn't it? What we've all been doing in our residences these many years is suddenly challenged - threatened by zoning ordinance provisions in numerous municipalities, on the grounds that any activity requiring the erection of a pole or tower in one's yard high above the rest of the landscape has no place in a residiential area. The angles were many: that such towers are eyesores, that they depreciate surrounding property values, that they ought to be in industrial zones - yes, even that they cause TVI! But the effect would be the same - to restrict amateur operation by prohibiting the erection of masts and towers in residential areas.

This became a serious matter. Should the courts agree with the municipalities, it would for all practical purposes be the death knell of amateur radio as we know it. Watching the further development of the fashionable zoning ordinance craze on the part of the municipalities, accelerated since the war, the League decided the problem must be settled - and settled right.

This came from the October 1951 QST. The column then goes on to describe Supreme Court cases in New Jersey and Pennsylvania that were won and set a precedent for all future courts to follow! They also speak of how much money was spent, I guess the lawyers have been making money off this for 44 years, and probably 44 more.

1068. Re: Fastest way to learn CW ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-17 00:00:00 UTC
From: genunn@mmm.com
Message-ID: <3uepoc$gko@dawn.mmm.com>
Source record: 242283

I went from nothing to extra in 9 weeks. I started on March 28, 1995 by buying Gordon West's Novice/Tech book and tapes at Radio Shack and listening to them on the plane ride back from a business trip. I passed the 5 wpm test on April 11, the 13 wpm on May 4, and finally the 20 wpm test June 1.

Here's my perspective.

V31RY (v31ry@aol.com) wrote:
: I'd recommend Super Morse for the learning drills.. Use the Farnsworth
: method..

I used Gordo's tapes to learn the characters and build speed. W1AW code practice and bulletins, and listening to QSO's on a shortwave radio provided the drills. Super Morse was very helpful, mostly for judging progress. Farnsworth is the way to go. Also, disregard any nonsense about limiting code sessions to 10 or 20 minutes. Just go until you want to take a break, then go study theory or something for a while.

: Also, throw away any handkey you might have, and get an electronic
: Iambic keyer and a squeeze-paddle.. As you learn to copy the code, start
: practicing sending it as well.. Your receiving speed will jump because
: you can send faster than you can receive, and it will automatically help
: you learn to recognize characters faster!

: When you get your license, get on the air with cw and stick with it..
: Conversational cw is a blast when you're going 40 to 50 wpm.. Lots of us
: do it all the time! You get there by operating, and by starting out with
: a keyer.. A handkey will hold you back, and make you HATE cw!!!

I'm not sure I agree completely with the comments about the handkey. I have only used a handkey and I LOVE cw!!! How many extra class op's do you know that can count their phone QSO's on the big toes of their left foot? Of course, some might say that's the same one I use to send with :-) If the handkey held me back, it wasn't much. It might have been better to start with an iambic paddle, but I had just bought my rig and needed to give my checkbook a rest. I now have a keyer almost built and paddle should arrive soon, so I'll be making the switch. DO get on the air though, iambic or handkey, as this is the best way to "come up to speed." Let me emphasize that I am not saying that it is better to start with a handkey, just that it won't necessarily hurt.

I didn't use the tapes any more after passing the 13 wpm test. Mostly I got on the air and copied code bulletins from W1AW. Alan Braun NS0B (a frequent poster here) was kind enough to help me with some long QSO's that pushed my speed up. Super Morse continued to evaluate my progress. However, I had failed 4 out of 5 its simulated 20 wpm tests just before passing the real

test. I don't know if it wasn't calibrated well or if I was just lucky.

My "solid" speed was about 18 wpm when I took the test. The key to passing the "fill-in-the-blank" tests is to write down a character if you know it, skip it if you don't. If the character doesn't come to mind immediately, do not stop to think about it or you'll miss the next 5. Just leave a blank and keep on copying. This is much harder to do than you would think, but it is critical in passing these tests when your speed is marginal.

I passed the 20 wpm test with 9/10 correct fill-in-the-blank answers using this method. Nowhere near 1 minute of solid copy though.

Good luck!

1069. California Emergency Frequency List

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-17 00:00:00 UTC
From: childers@garlic.com
Message-ID: <3ueq2j$rov@garlic.com>
Source record: 242284

I have an excel spreadsheet that has most of the emergency frequencies for California listed...
It lists by cities and has the frequencies of police, fire, medical, and security agencies.
I would like to either make it available on Usenet, or put it on an FTP site. Would people mind if I posted it here? Or alternatively, where can I put it for anon FTP?
Thanx,
Bill Childers

The combination " - - - - " is used in Russian for their "x" which is spoken like the "ch" in German "Bach". I was told that sometimes German operators use it, too, for the letter combination "ch".

>Would anyone be able to
>suggest an affordable antenna that I can mount on my roof that would give
>me some more gain?

There is only one clear answer: drill a hole in the center of the roof
and get a proper mount. If you do not like the idea of drilling,
you can buy a 5/8 over 5/8 collinear and use it with the magmount.

It is not going to work well, but it looks impressive.

In article <3ubf6a$7e7@usc.edu>, buffingt@scf.usc.edu says...

*>What little I know about it suggests that if you did, the restrictions would
*>not be enforced by the courts, because they would most likely conclude that
*>such restrictions were against public policy. If a community bans antennas
*>later, one CC&R in the middle of the neighborhood to the contrary would
*>probably be struck down by a court, I'm guessing.
*>
*>I'm not sure if anyone has challenged an anti-ham antenna CC&R on the
*>grounds that it is against public policy (PRB-1, which indicates that ham
*>antennas are FAVORED by public policy). However, a sympathetic court could,
*>if it chose, refuse to enforce it if it chose. Just like courts won't
*>enforce racist CC&Rs (i.e. property can only be sold to X religion, etc.)
*>and the like, because this violates notions of public policy.
*>
Sorry but PRB-1 says expressly that it does not reach private covenants.

> >f is frequency
> >sigma is conductance
> >mu is permeability

I'll buy that any day. Now, I have a (dumb?) question: What if you take

stainless steel? Not that you'd want to, considering the price &
electrical
properties. (I have the uneasy feeling I should know the answer to this
one ;-)

Thanks,
-6tlh

Could some one recommend an Internet Service Provider for me. I'm looking
for:

New York City local phone number (essential)
Untimed access (preferred)
PPP access (essential)
Fixed IP address (essential)
SMTP mail server prefered
NNTP news server with large newsgroup range (essential)

I will appreciate any advice or recommendations. Sales pitches okay also.

Please email any replies.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 JULY AND FORECAST FOR 18 JULY - 20 JULY

1A. SOLAR SUMMARY
Activity: Very low

Flares: None.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 16 Jul
Daily Proton Fluence >1 MeV: 2.1E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.9E+06 (normal)
X-ray background: A2.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Jul 19 Jul 20 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Jul: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled with active conditions
09-12 UT and 15-18 UT and minor storm levels 12-15 UT.

Estimated Indices : A K Observed A Index 16 Jul
Learmonth 20 3334 5422
Fredericksburg 24 28
Planetary 28 20

Observed Kp for 16 Jul: 1022 5535
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Jul 12 Mostly unsettled with isolated active conditions.
19 Jul 8 Quiet to unsettled
20 Jul 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
17 Jul fair-normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Jul fair-normal fair-normal fair-normal
19 Jul normal normal fair-normal
20 Jul normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
17 Jul 42 Near predicted monthly values, with 30-50%
enhancements from 09-19 UT.

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Jul 20 Near predicted monthly values. Spread F may degrade
night communications.
19 Jul 20 Near predicted monthly values
20 Jul 20 Near predicted monthly values
COMMENT: Darwin MUFs: were near predicted monthly values with sporadic
E at 12 UT and some night spread F.
Townsville MUFs: were near predicted monthly values with 20-30%
enhancements 11-17 UT. Sporadic E obscured the F region at 07 UT.
Hobart MUFs: were near predicted monthly values with night spread F.

1085. Fastest way to learn CW?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-17 00:00:00 UTC
From: FRANK W LEE <frank@yorks.demon.co.uk>
Message-ID: <806010763snz@yorks.demon.co.uk>
Source record: 242331

Hi, well everyone to his/her own ideas. I suspect many would disagree about not using a hand key, but there you are.
When I was learning, some 25 years ago, I found that listening on the bands was useful and always kept a tape recorder handy. By this method, you can record some code, then keep playing it back... stopping and repeating as needed, 'til you get the sense of it. Listening to commercial stations (there are still quite a few) is useful, as some 'ham CW' is not all it should be!
Perhaps the best advice I can give is to get to know a local who will teach you personally. Also, join your local club; they often run courses, but it's a good way to meet CW minded folk anyway.
Tapes are also useful as are the many electronic tutors.
I hope this is of some use and all the best with the code.

1086. WTD: Info on KING VHF portable

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-17 00:00:00 UTC
From: trynor@mi.net
Message-ID: <3uehhi$atp@scratchy.mi.net>
Source record: 242332

I recently purchased a KING VHF portable model # LPh 5142 C 815167 which has 14 channels, scan, priority channel and dtmf/programming pad. I have been told that this radio is programmable via the pad on the front, but I have no information on how to do this.

The fellow who sold it to me said that two jumpers on the microphone connector had to be jumpered to allow programming.

Any information on this device would be appreciated....even a tel # for King Radio.

I do not go away if ignored.
I was never on FIDO, RIME is where I was.
And after 8 years I am still there.
You tell others to ignore me? Like you did?

From: rodtool@aol.com
Message-ID: <3uhp44$s6a@newsbf02.news.aol.com>
Source record: 242086

I've had mine for about 1 year now - and I really like it. The compact size can't be beat...the only thing that I didn't like is that you have to buy an adapter to use an external power source...I got one from W7W Associates - and it works just fine.

Other than that, it's a great little radio, and I'm always told that my audio is really superb. Good luck with the new purchase...

BTW, you can get a computer program so that you can program all of the HT's features from your PC - that sounds really great - I think I'm going to pick one up for myself...if for nothing else than a permanent backup of all the memories.

1091. Taking a radio to Italy

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-18 00:00:00 UTC
From: atkes@imap1.asu.edu
Message-ID: <3uh6sn$2c4@news.asu.edu>
Source record: 242087

I will be working in Italy for several months. I plan on applying for a reciprocal license after I get settled. Will I have any problem with customs bringing a 2-meter handheld into Italy from the U.S.? I will be carrying my U.S. radio license and I, of course, have my passport and visa.

Message-ID: <3uh8kj$dm8@rs10.tcs.tulane.edu>
Source record: 242088

BTW (by the way),
While http://www.qrz.com/callbook.html always had the latest call signs
in it's database, I know because I would download the data from the FCC and
check, telnet://callsign.cs.buffalo.edu:2000 did not have my call sign the
day after it was issued.

The ARRL has literature describing what it takes to get reciprocal
licensing in a number of countries. I would recommend that you call
them and ask for info (I think you have to send in a SASE, but I'm not
sure).

My recollection from reading about it a few years ago is that it is a
very good idea to have the license *before* you try to cross the border.

Can anyone point me in the direction of a textbook which contains information on the design of electrolytic capacitors?

I am looking for information including what materials are used for the electrolytes, how to compute the capacitance, breakdown voltage, loss, etc.

I can be e-mailed directly on this. No need to burden the whole newsgroup!

1097. Indiana Balloon Launch Results

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-18 00:00:00 UTC
From: mgarrett@prairienet.org
Message-ID: <3uf7r1$qgi@vixen.cso.uiuc.edu>
Source record: 242093

Just a note to let those intersted that the balloon flight for
Veedersburg, In did take to the air at 7:50 am CDT. There was some delay
caused by one of the three helium balloons failing on the ground and another
was filled to take it's place. The primary reason for 3 balloons was to test
a way to cut down on spinning on the package and it was found that spinning
was minimal thru the flight. The balloon attained a altitude of 86,000+ and
landed near state route 63 and US 41 west of Attica, IN.
ATV was easily seen P-4 out 300 miles and also the cross band repeater on
UHF and 6 meters worked out equally well. Many comments were noted during
the operation on the strenth of the 6 meter output which was a recrystaled
and tweeked baby monitor transmitter.
Balloon sustained very little damage (broken element on the ATV mini wheel)
and the group is looking to fly again soon. Keep your eyes peeled for
future flight announcements on this newsgroup.
Thanks to all who participated in this flight.

I'd like to know what others think and how others
>handle the effects of summer heat on their equipment. Thanks.

This is the second summer I have left a Yaesu 5200 in the old Honda right up near the windshield where this old yankee sun beats on it like all getout. Often it will sit in the driveway for 2 days with the windows up and no shade on the car while I am using the work truck around the village. So far - so good, Knock on wood (tapping on my head). Bottom line is...I don't know for sure, but thought hearing this might help.

Hi again, everyone, NF3I (Scott) here. My wife, N3MXZ (Chris) and
I have become involved with the Leukemia Society of America's

"TEAM IN TRAINING"

This is a combination fundraiser/road race for which we train for 6
months and raise money during the same period, with the hope of, if
we achieve both goals, running in the Bermuda marathon or 10k race
on January 13, 1996.

So where do y'all come in?

We have to raise $6,000 between us for the Leukemia Society.

86% of the money goes directly to treatments, research, and education.
14% goes to the cost of the trip. Room rates have been negotiated
down, and many airline tickets were donated by USAir.

To any ham (or non-ham) interested in sponsoring us, your callsign
(or whomever's name you want) will be written on the shirt in which I
run the race. It's a worthy cause and a dedicated organization with
important work to do, and we must be getting into shape...

Thank you for your support - should you wish to help out, upon receipt
of your check, the Leukemia Society's DC chapter will send you a thank
you note (a.k.a. receipt). It's a tax-deductible donation, too.

From: Vesa Matikka <vmatikka@dream.imagew.fi>
Message-ID: <3ufkuq$b0a@idefix.eunet.fi>
Source record: 242097

I'm into a binary data transfer by radio.I've not much knowledge of radio experiments,so my questions may sound simple.
There are few charasteristics which the transceiver should perform:

1. What would be the recommended carrier frequency for data transfer rate at about 50k bits per second?How much higher carrier must be than the data rate?

2.Can I use FM-modulation for binary data flow?

3.How powerful the transmitter should be for sending that data to the distance of 5 kilometers,,or 500 kilometers?

4.What wawe frequency must be used for a long distances?Do radar frequency do worse than LW?It eould be ideal to use radar frequency,as the transfer rate could be increased dramatically.(What do u think about 2M bps??

Please send me E-mail,I don't read regulally this newsgroup...!

Thanks for advices...

Governor's Office of Emergency Services

Bulletin 387 - for Release 7/17/95
OP - Aspects: Shadow Operations 2/2

Continuation of article by By Bill Pennington, WA6SLA, Inland Region Assistant Radio Officer, State OES ACS.

Portable operations are more difficult in that a 5 watt handheld "rubber duck" type antenna is terribly ineffective. A 1/2 or 5/8 wavelength telescoping gain type antenna is almost a must. A way to keep the antenna away from the attenuating effects of the operator's body is also a good idea. There are various suspenders or pouches that will place the radio high on the chest with the antenna away from the body and improve operation. Spare batteries are a must as a shadow can expect up to 12 hours in the field on one assignment. A battery pack for AA alkaline (or regular carbon) batteries is extremely useful. Generally the agency in charge of an incident will have these in stock and avaiable to the shadow operator. A speaker/mic with earphone or boom mike and earppone is very useful in high noise areas.

One way to improve portable operations is to use a mobile dual band full duplexing transceiver as a repeater in conjunction with a hand-held. (This is also known as back-to-back operation.) This will allow excellent portable operation as long as the operator is within several hundred yards of the mobile repeater.

This is probably one of the most interesting operating postions in Amateur Radio. Only well trained, experienced and properly qualified operators should fill this position.

In case no one has thought of this yet, QRZ saying no previous license
does *not* mean there wasn't one. None of the electronic call books I
have seen keep records back all that far. People I know had other
licenses are listed as "no previous license." So, it is possible this
guy started as a novice, worked his way up (before whatever date QRZ
goes back to), and got the 1x3 in there sometime.

Just a possibility...

Jim,

Really? Here in Michigan we went to a 20 KHz spacing about ten years
ago on repeater freqs, but curiously, left the simplex freqs at 15KHz!

I guess it would be best if someone from Wisc. told us what would be the
"correct" simplex freq to use, or at least how they handle simplex
spacing.

>
>You're right, some people still like to build, and that's a good thing. On
>the other hand, the vast majority of hams don't build stuff and never will.
>This too is OK.

To expand on this a bit, I chatted with Wayne Green about this very subject. His opinion is that hams like to read about construction projects, like to dream about doing it themselves, but in fact few actually do. Those few are often, but not always, skilled enough to design their own projects, and use the projects in the magazines and the ARRL books just to stimulate ideas. I think he's right about this. I've been associated with several kits that were sold from magazine or book articles. Sales are modest, very modest, compared to the magazine circulation figures. And I'd estimate from returns, and from questions received, that a large number of kits sold never get finished.

Ham Radio Magazine, which was the best builder's magazine, never had a large circulation. I think it was something on the order of 30,000, or less than 5% of US amateurs. That's probably an over-estimate of the number of US hams who regularly build RF equipment.

As Roger says, that's Ok. We can't expect everyone to be a radio builder. Probably more people modify commercial equipment or build station accessories, and those can be technical challenges too. And today we see more people working at the systems level of abstraction, and building more complex projects than those who work only at the discrete component level. That's good too because communications is moving increasingly to a more abstract and integrated paradigm which offers far greater capabilities than can be gotten with simple component level projects. Systems analysts are paid more than keypunch operators because that higher level of abstraction creates more value.

Its time to renew my call, and being inactive for the past few years I am behind the times on the rules. I understand that with an Advanced ticket I can go after my old call from the 9th call area that I had as a kid. It is presently unassigned as far as I can tell. But, the new form 610V is apparently not yet available.

So, my question is, can I go after my old call? And if so, what is the process? Use form 610? Other than money, anything else special required?

These questions have probably been answered many, many times in this group so I apologize in advance for not being current. Don't see it discussed in a FAQ so if someone can steer me to a FAQ that answers these that will be helpful, too.

Thanks much.

The FCC will send you a 610 by fax now - not even duplexed. You have to send it back by mail. I got it by plain paper fax and photocopied it (two sheets) for extras. Mailed in the change of address and it they took it without question. I imagine they would not appreciate curly, thermal fax paper - that's just a guess.

Please note this number you can call to get a 610 form. YOU MUST CALL FROM A FAX MACHINE. Call 202-418-0177. The document retrieval number is 000610.

1115. FORM 610 (You can get it by FAX)

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-18 00:00:00 UTC
From: Curtis Wheeler <cgwh@chevron.com>
Message-ID: <3ugm9s$q37@gaudi.lahabra.chevron.com>
Source record: 242205
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I have noticed a lot of postings recently about where one can get an FCC Form 610. Everybody must be moving (like me) or has a ticket that is about to expire.

The FCC forms distribution contractor in Washington D.C. will send you the form by fax - and the FCC will accept it.

You must call from a FAX machine. Pickup the handset and dial 202-418-0177. Follow the instructions for retrieving a specific document. The document retrieval number for the 610 form is 000610. The recorded voice will tell you when to push the start button - and the form will arrive.

To be polite, if you are using a thermal paper fax, you should photocopy it onto plain paper (8 1/2 x 11). No one likes that thermal paper and the print is unreliable - it may not be acceptable by the time it arrives in Gettysburg.

If someone maintains an FAQ, this info should be in it.

What is the double standard?

In California, as in most states, eligability to vote in national and state elections is revoked while you are in prison convicted of a felony, and as long as you are on parole. Anyone not on parole or in prison can regester and vote.

I've never heard of anyone loosing their ham license because of a non-ham related offence.

: You're right, some people still like to build, and that's a good thing. On
: the other hand, the vast majority of hams don't build stuff and never will.
: This too is OK.

Roger is right here. When Heath stopped furnishing their interesting kits, a lot of the building (well, assembling, to be exact) died. While there still are builders, and there still are kit suppliers, homebrewers are definitely in the minority; a minority that is dwindling every day. I would guess that many hams today can't even fix their own equipment, much less design and build it.

This Sunday, July 23, 1995, both the 1995 Dayton Amateur of the Year, Rosalie White, WA1STO, and Adam Weyhaupt of Alton, Ill, will be the special guests on the Ham Radio & More Show. Find out what Rosalie and Adam have done to get these prestigious awards. Also find out how youth activities are becoming more widespread in amateur radio. Have your youngsters listen to find out how they can become hams, too. Tune into Ham Radio & More at 6:00pm ET, (2200 utc), Sundays. The show is carried live on the 24 hour, 7 days a week, national Talk America Radio Network, available on over 50 stations countrywide, and also on tvro, spacenet 3, transponder 9, 6.8 audio, as well as, tape delayed, worldwide, on WWCR shortwave, 7.435mhz, on Mondays at 0400utc and again at 0900utc. The toll free call-in line is 1-800-298-TALK. For more info, connect to the home page, courtesy of the Boston Amateur Radio Club, at http://www.acs.oakland.edu/barc/ham-more.html.

73,
Len, KB7LPW

casey@dseg.ti.com

Casey,

You said to Oliver:

CA>>I have both the FT-11r and the FT-51r. Both are great radios. I have had a
CA>>few and these were the ones I will keep and continue to
CA>>use. The FT11 is the smallest FULL
CA>>featured radio you will find.

I just bought the FT11R and saw (in the manual) the set up for running
packet. I was wondering if you have ever run packet on 2M and if so,
what would it take to set up since I already have a computer and the 2M.
Oh, I also still have a 10 Watt 2M handheld amp and a 12v power supply
in the garage.

CA>>it has expanded recieve right out of the box. You can mod
CA>>it for transmit through
CA>>it entire RX range via a SMT jumper.

Where would I find the SMT jumper. I've not worked on radios since my
Heathkit SB 102 !

Thanks,

Ed DeBee

|> This last has been proposed, in a letter to QST, for the @.
|>
|> 73, doug

I saw the same letter in August QST and was wondering:

what is wrong with

adams at sgi.com or
adams at sgi dot com

for the email address on the air? "at" is certainly shorter than the above di-di-di-da-da-dah and "at" is the way we say it in day to day conversation. I'm more interested in the transmission of information than in the few milliseconds that I'm ever gonna save using a new prosign. Think about how many people want or would use the circa-a symbol in daily conversation or on the air. Are we gonna add this to what people already consider a major stumbling block? NOT.

And in the numerous QSOs on the air in the last six years never I can recall a single instance where the topic ever came up where someone wanted my email address. :-)

OK, now I have trivia question to go into the dweeb trivial pursuit platinum game. :-) Name all movies that have a snipit of morse in them. (What was the code speed? What was the text? Who was in the movie? Who sent the snipit? .... for extra credit.) email to me as I am going to summarize to all interested parties. tnx es gl (Thanks and good luck - for the humour empaired) :-)

What was the snipit of code that appeared on PBS radio a few months back?

dit dit

Curtis Wheeler (cgwh@chevron.com) wrote:
: stuff deleted
: You can usually petition the board of directors to change the CC&Rs and
: have those changes recorded. You might have a complete antenna
: prohibition changed to allow antennas on a case by case basis with
: association approval - perhaps an archetectural review or whatever. But
: be aware that what is a thing of beauty to a ham (a big shiny tower) will
: probably be an eyesore to your neighbors and potential buyers (effecting
: resale value). With that in mind, the association will likely stand
: behind a restriction on towers in the name of protecting property values.
: And I have to admit that in my situation (townhouse with small yards) I
: would not support a petition to permit the contruction of a tower.

Most of what Curtis stated is true EXCEPT for the statement implying
that towers affect property values. They do not. As simple as that.
I can quote two studies that show that they have no bearing on home
prices, or purchasing decisions. Better than that, I can quote my
dad, a real estate appraiser of 20 years on the subject. "Towers
don't affect the price of a house." This is an "urban myth." ;-)
It is used as justification for the restrictive an often retentive
CC&R's that many of these communities have and has no bearing in
fact.

To me, one of the most comical, if not just out-right sad situations
is Foster city. Here is a completely planned community...and they
went after poor Jimmy with a vengance.. to the point where his life
has been threatened and his property has suffered physical damage
from vigilantes. (That is the sad part). The hilarious part is
the 100+ high-voltage towers running straight thru the town and the
fact that they are right in the landing path of SFO with the planes
going overhead at a few hundred feet! Oh yeah...Jimmy's 50 foot
tower was a real eyesore, and really upset the architectural balance
of the place (tongue was in cheek on that last.)

If someone is interested...I could post a little letter that another
ham in Foster city received some years back...unsigned..that threatened
all sorts of stuff if the guy didn't get out of this evil hobby.

Anyway...back to the original reason for the post... there is NO PROOF
that towers affect housing prices. Repeat after me in a mantra
fashion...there is NO PROOF...

I would like to offer an opposing opinion on how well TASMA is managing spectrum and its acceptance among the Southern California Ham community.

An excerpt from the recent Newsline:

> TASMA RECALL
> The head of Southern California's Two Meter repeater
>coordination council has been recalled. By a[sic] approximate three to
>two majority vote, that itself may be questionable, Attorney
>Sidney Radus, N6OMS, has been removed form[sic] his role as leader of
>the TASMA political structure.
[...]
> TASMA has become an organization that is so totally immersed in
>is own internal political strife that it seems to have forgotten
>its only reason to exist. To simply advise hams on the best
>frequency on which to put up a repeater, and to do nothing more.

I recommend that all who are interested read the article in its entirety.

>What a moron. Anyway we need to communicate. Any suggestions?

>Corben.

As with most frequencies above 50 MHZ, consistent communication is usually line-of-site, with variables such as terrain and RF bending affecting the outcome. What you are going to need generally is altitude. I sometimes use my own formula to determine the distance from an antenna on a tower to the curvature of the earth. It goes something like this: Take the square root of the height, multiply it by the square root of 2, then add 20-30 percent for RF bending. The 20-30 percent is the variable. Trees, mountains, freq. and other obstacles are some of the variables. Hence an antenna on top of a 100 foot tower (square root of 100 = 10) times square root of 2 (1.414) = 14.14 miles + possibly 30% of 14.14 or approx 18 miles. At UHF freqs expect this to be less.

1145. Re: New call sign by internet

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-18 00:00:00 UTC
From: Michael Pilman <mike@mailhost.tcs.tulane.edu>
Message-ID: <3uh7nr$dm8@rs10.tcs.tulane.edu>
Source record: 242235

Last month I started this thread by asking if anyone knew how much time I could hope to save by getting my call sign off of the internet. Well I am happy to report that I have the first variable in that equation. My call sign was issued yesterday, 23 days after I passed my test. I will post again when I recieve my liscence in the mail to let everyone know what the difference is.

Isn't it ironic that after nearly a month of dailey checking http://www.ualr.edu/doc/hamualr/callsign.html crashes the day before my call is issued? Luckily, I knew how to download the file straight from the FCC and did so.

Thanks to all who replied here or via email.

Mike (KC5PSC)

1146. Repeater with CTCSS input but none on output

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-19 00:00:00 UTC
From: bes@ihnns721.ih.att.com
Message-ID: <DBy2qE.HpD@ssbunews.ih.att.com>
Source record: 242100

How do you handle a repeater that requires a PL tone on the input but does not transmit with a PL tone. I have a Kenwood TH 79ad HT and there are at least two repeaters in my area in the 2m band that do this. At first I thought I had the PL frequency wrong because after trying to transmit I did not get any courtesy tone or anything. But I noticed that my signal strength meter was strong for a second or so after the transmit. So I got my scanner out and tuned it to the repeater's output frequency and tried again. Sure enough my suspicion was confirmed. I heard the repeater's courtesy tone on the scanner. I was hitting the repeater but filtering out its output signal on the HT because it's expecting to receive a signal with the same PL tone. Either the repeater is not using a PL tone on the output or it is different from the input PL tone.

I looked in the Kenwood manual and I did not see a way to set the CTCSS function on just the input but not the output.

Am I correct in my suspicions as to what is going on here?

Am I missing something, is there some easy way to make this work?

I'm new to amateur radio so if this a simple minded problem I apologize. Any help would be appreciated.

Bob

: I looked in the Kenwood manual and I did not see a way to set the CTCSS
: function on just the input but not the output.

: Am I correct in my suspicions as to what is going on here?

You are correct.

: Am I missing something, is there some easy way to make this work?

There should be three states to the ctcss functions off tone ctcss

You need to set the radio in tone to only transmit the tone. Set ctcss to
also decode the repeaters or stations that transmit tone.

tone is encode ctcss is encode and decode

: I'm new to amateur radio so if this a simple minded problem I apologize.
: Any help would be appreciated.

If more repeaters would transmit their tone you might not have noticed
the "problem". Have Fun

Dear Repeater owner, or op,
this is Rod KE6MGB, and I really want to become a Repeater Control Operator. I live in So. CA, near the Pasadena area. I can work on 2 Meters, 440, and 220 MHz. I really want to become an op, and I think it would be alot of fun. If you need some extra help monitoring those air wave to keep the unwanted off, or just to be sure everything is going well, please email me at:

KE6MGB@IX.NETCOM.COM

I really want to become an op, so if you can't help, please refer me to someone in So. CA. I also work 10 Meters. I really would like to be an op on 2, 220, or 440 MHz, anyone is fine.

Best 73's,

Thank You Very Much For Reading This Letter, I Hope You Can Help :--)

Rod KE6MGB/SO.CA.USA

1149. 220 MHz REPEATERS

> infrequently used). Your choice could interfere with two standard freqs
> instead of making good use of just one?

Actually, Jim asked me (Jer/) for my opinion.
As I have operated for years on simplex on 147.425, that is what
I suggested. Note that Jim also protected the repeater and its actions
with a 107.2 CTCSS tone.

If you have interference data that Jim and I don't have, please make
it known, as Jim has to program the machine and leave CA soon.

See you at OSH!

Just to let you know, I passed my Advanced on July 6th
(EEEEEYYYYYYABBA-DABBA-DOOOOOOOOOOOOOOOOOOOOO!!!!!!!!!!!!!!)

Anyway, though I finally got my Advanced, I didn't get it on my first try. I passed the theory the first time, but the 13 wpm seemed as elusive as dx on 300 ghz. Well, it took me three tries, but I figured out a few things. First, don't burn yourself out on the code, study 5-15 minutes at a time, even if you do so several times each day, and if you feel you need a break from the code for a day, by all means TAKE IT!!!!! About a year or so ago I tried to get my General, and I did nothing but cram for 2 days, and was doing so right up until the exam, when i was so burnt out and nervous that I failed the test by one question. If you are having trouble recognizing letters at times, it may be "code fatigue". True I failed it a second time recently at another try, but this time I wasn't just going for General, but Advanced. I was NERVOUS as could be, and so this time it wasn't burnout but nervousness. (yes, I passed the 3b and 4a elements that day.) So on July 6th I tried an experiment. I decided for the fun of it to go for 20 wpm first, since I knew I would be nervous and miss most of it anyway. By the time I calmed down it was half over but I was getting used to the higher speed, so when the 13 wpm came up, I was calm and it sounded slow. I passed that night. I hope I have been of some help, and good luck.

My wife Chris, N3MXZ, and I (NF3I) have become involved in a fundraising effort with the Leukemia Society of America. Over the next 6 months, we and the entire "Team in Training" from the Washington, DC area, will be preparing for the Bermuda Marathon series of road races.

They will be held in Bermuda from 12 to 15 January, 1995. The only catch is that EACH runner/walker must raise $3,000 in order to enter the race. Of the $3,00 raised, $2,500 goes directly to treatment, education, and research in the fight against all forms of this hopefully curable disease that claimed my grandmother at age 60, along with thousands more.

Airfare, hotel, meals, and race fees make up the remaining $500 (Special rates have been negotiated with hotels, and USAir has pledged to donate some tickets, the rest to be purchased at a discounted rate).

To show that my fellow hams are supporting this effort, I pledge to write a name (in honor of someone?) or your callsign on the shirt in which I run the race (or walk, should my knees give out on me). $3,000 is a lot of money, but it CAN be done.

And donations are tax-deductible.

Checks payable to the Leukemia Society should be sent to:

Scott Rosenfeld, NF3I
4015 Sparrow House Lane
Burtonsville, MD 20866-1333

and will be replied to with a "Thank you" note from the society. Feel free to email or call, and no flames please. If you can't ask fellow hams, who can you ask?

Thanks, and see you on the bands!

I will also consider equipment donations, which I will try to sell at
local hamfests. Upon sale of items, I'll email or call you as to how
much was received, etc., and forward the info to the Leukemia Society.

Thanks!

1163. which GMRS or PLMR unit?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-19 00:00:00 UTC
From: gsk@khaki.esd.sgi.com
Message-ID: <3uirlk$oq6@gazette.engr.sgi.com>
Source record: 242117
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

please help me shop for a pair of gmrs or plmr units.

- are there any comparative reviews available?
- has anyone out there done their own comparisons?
- which specific models do you recommend or not recoomend,
and why?

- what's the difference between gmrs and plmr?

- is there any reason to prefer a unit sold specifically for
gmrs/plmr or a unit that can be programmed for those frequencies?

- can you recommend a good mail order source or retail shop
in the s.f. bay area?

i'm interested in using them for outdoor activities
like hiking, fishing, etc. and for personal use in a
suburban setting. range, weight, audio quality,
durability, features, and price are all of interest.

any info would be appreciated.

thanks.

>Keep at it it's worth it in the end, and, as an opponent of the no code
>licence, I consider it to be an essential part of the examinations.
>Remember, NO GAIN WITHOUT PAIN...

Pain is the body's mechanism for reporting cell damage. In the case of some long muscles, the body will respond to the damage by building muscle mass. But in the case of other tissues, neurons for example, once you lose one, it's gone for good. Or in the case of connective tissue or cartilage, damage is often irreversible. Pain in this case serves an avoidance function.

NO GAIN WITHOUT PAIN has been fairly well discredited in the physical conditioning field, witness the rise of things like low impact aerobics. The damage accumulated under the paradigm of no gain without pain is often more harmful than the muscle mass gained, see any broken down former athlete for examples ranging from bad knees to tennis elbow to chronic inflamatory arthritis. Gain *without* pain has now become the dominant paradigm. Many of the low impact conditioning systems now in use depend upon machines that work the body smoothly without jarring or tearing, or pain.

To bring this back around to communications, we now have machines that can offer us communications gain without the pain of manual methods. We should take a page from the physical conditioning field and stop using methods that generate pain, and the damage that triggers that pain.

>handle the effects of summer heat on their equipment. Thanks.

It does get hot down here. I haven't had a radio failure yet
due to the heat inside an auto, but I have had the LCD display
of an IC-28H turn black due to the heat. It recovered when it
cooled down. Most electronics will tolerate a storage temperature
of 70 C (about 158 F). Cars can get that hot sitting in the sun
on occasion, and something in a car that's directly exposed to
the sun may get hotter still. I've had rearview mirrors fall
off the windshield because the heat became so great the glue
let go, and of course I've suffered cracked dashes and cracked
trim due to the heat.

The heat isn't good for your radio, and it isn't good for your
car's interior either. So the best course is to try to limit
the heat gain to the interior of the car. One method is to
use the cardboard windshield shades, another is to use the
louvered blinds for the rear glass, or heavy tinting. Keeping
the side windows cracked doesn't allow much air circulation,
and is an open invitation to theft. A power ventilator is a
better idea. There are models using solar cells to operate
them which might work well.

Putting your radio in a styrofoam cooler can limit the heat
gain to which it will be exposed. This is probably the simplest
thing you can do.

I wonder this any of the police have been ticketed yet. They are always driving around typing on there remote access systems checking liecence plates. Whats good for the goose is good for the gander, If it is a safty related issue, it will be just as unsafe for them as it will be for the aversge joe smoe. Not only do the (the police) have to drive safly, they have to type and read a terminal at the same time plus observe law breakers, quite a task if you ask me

<deleted>

Don't dispair Buddy. It's normal and expected.

When I was studying the code I'd adjust my code generator to produce
random 5 character groups and I'd set the speed to a point where I'd
get 4 out of 5 correct. That speed changed daily. Some days I'd
be able to speed it up a lot, some days I'd have to slow it down a
lot. I kept it at that 80% point and discovered that even though
there were good days and bad days, the average speed steadily increased.

80% is a good challenge point for me. If it was lower I wouldn't feel
challenged and if it was higher I'd become frustrated.

Bear in mind: Things that work for me (or anyone else in the world) may
not necessaraly work for you.

Good luck.

>jeffrey@math.hawaii.edu says...

>> Do you think QST, CQ, 73, and the
>>other magazines would carry construction articles if no one was building?

>To be honest with you, Jeff, yeah, I do. Just like they keep running crap
>about traffic handling in QST.

We'll never know how many folks are actually building what appears in
the magazines but you do need to address why the ARRL Handbook is the
largest selling technical book in print. If hams (and non-hams) were
not building the projects that appear in the Handbook then why would
they spend $25 for that text? The theory portions and data tables (i.e.,
the non-construction chapters) do appear in cheaper books.

Jeff NH6IL

1184. Examination Opportunities Scheduled 7/18/95 to 11/27/95

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
203-594-0200 x0219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0200
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

[[EXAMNT7.18W : 3600 in EXAMNT7.18W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
203-594-0200 x0219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0200
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

I'm looking into getting a new 2m and the FT2500M looks like a good deal. Does anyone have any comments about or experience with this radio? I would appreciate any info you could provide.

Thanks,
Dave

1187. Cootie Keys (was: Fastest way to learn CW ?)

>side?

Close. Wire the paddle's left and right contact terminals together
and you now have a Sideswiper (or Cootie Key). To send, never use
the same side twice - always use alternate motions whether its a
dit or a dah: -.-- would be leeeft right leeeft riiight. Takes
some time to get used to but you can send faster with a Cootie
than a straight key. Cooties became popular in the mid-20s.

They're quite easy to make, but I'd love to have an original. If
someone's got one *please* let me know.

>I thought it used to be a sort of uniform for them. I know mine did. Hate to say

Hi Dray,
I took my exam at the San Francisco Federal Building in 1976 - all the
examiners had crewcuts, white shirts, black ties. Scary! All announce-
ments to the staff and to those of us in the lounge were piped over the
loudspeakers in Morse, so even the secretaries knew code. Drove two hours
from Bodega Bay, passed the General, and then celebrated with a huge lunch
at Fisherman's Wharf. Yum!

Jeff NH6IL

1189. New license!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-19 00:00:00 UTC
From: rothkev@mail.auburn.edu
Message-ID: <DBz1Mn.K3y@mail.auburn.edu>
Source record: 242143

I have passed the test and the examiners said there was a number I could call and find out my callsign in just a few days. Anyone know this number? If not, they tell me the wait is down to about a week now! The FCC must be the fastest department in the gov. now! :)

Can anyone provide an address for the South-East Repeater Assoc (SERA)?

I understand that this group coordinates all repeaters in the SE USA and
publishes a newsletter.

I would like to subscribe to the newsletter but have not been able to find
any info on them. Can anyone help??

I tried the HRO store in Atlanta but they advised me that they only get a few
copies and they sell out real fast.

Thanks - Keller Taylor - WA3YSU

Hello,

The subject is self-explanatory. I have two different addresses for the FCC in Gettysburg, and I need to know which is correct. I'm changing my address with the FCC for my amateur radio license, and I need to get a copy of the 610 form. Please e-mail with the address you have.

Thanks and 73's

Ned

Seven is the minimum passsing score. No matter what format.
Question and Answer (multiple choice) tests are rather uncommon, FYI.
Most VE teams either require fill-in answers, or one minute solid copy
(25 consecutive characters for 5 wpm).
